KDB 680106 D01 Section 5.2			
Requirement		Description	Result
(a)	Power transfer frequency is less than 1 MHz	110~205kHz	PASS
(b)	Output power from each primary coil is less than 5 Watts	Primary coil (TX) Power = 5W	PASS
(c)	The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that are able to detect and allow coupling only between individual pairs of coils	The wireless charger includes only a single primary coil which two induction coils in parallel connected.	PASS
(d)	Client device is inserted in or placed directly in contact with the transmitter	Client device is placed directly in contact to the top of the wireless charger for the charging.	PASS
(e)	The maximum coupling surface area of the transmit (charging) device is between 60 cm ² and 400 cm ² .	The maximum coupling surface is the whole surface of the top of the wireless charger pad. The total area = 44.5cm ² .	PASS
(f)	Aggregate leakage fields at 10 cm surrounding the device from all simultaneous transmitting coils are demonstrated to be less than 30% of the MPE limit.	The worst measured aggregate leakage field at 10 cm is 0.013 A/m and less than 30% of General public limit. Please refer to RF exposure report.	PASS
