1 SUMMARY

See Appendix 1 for photos.

Emission measurements as specified below have been performed.

1.1 Test plan

Standard	Name of the test	Results
FCC 47 CFR Part 15C	15.247 Operation within the band 2400-2483.5 MHz	Passed
-	Duty cycle measurement	n.a.
15.247 (a) (2)	6 dB bandwidth	Passed
15.247 (b) (3)	Maximum conducted power	Passed
15.247 (d)	Emission outside frequency band.	Passed
15.247 (d)	Emission in restricted bands.	Passed ¹
15.247 (d)	Band Edge	Passed
15.247 (e)	Power spectral density	Passed
15.207 (a)	AC conducted emission	Passed

PASSED	The test was performed and the test specimen complies with the essential requirements in the standard.
FAILED	The test was performed and the test specimen does not comply with the essential requirements in the standard.
REF	The test is covered by a test in another report and/or on a similar test specimen.
NR	The test is not relevant for the test specimen or has been waived by the manufacturer.

Note 1: As the results of Maximum conducted power and Power spectral density measurements are very similar to the results from the test of AT-DG2 running IEEE 802.11n the test is omitted, refer to test report 'P18-0060-3 rev1'.

1.2 Test Specimen

Manufacturer	Airtame ApS
Name	Airtame 2
Model No.	AT-DG2
Test Software	Production FW allowing set up of radio parameters.
Supply voltage	5 VDC from USB

The AT-DG2 enables streaming from computers and mobile devices to TVs and projectors wirelessly or through Ethernet by a Ethernet to USB adaptor with PoE.

The wireless connection is built on a Cypress (CYG89342) chip.

The 2.4 GHz radio uses frequencies in the range 2412 MHz to 2472 MHz.

The AT-DG2 had a production firm ware which enabled control of the Cypress chip.

As the frequency range is greater than 10 MHz, at least 3 frequencies are selected for test.

For the conducted test AT-DG2 no 12 was stripped of housing and equipped with a temporary antenna connector.

For radiated test AT-DG2 no 10 were used. It was not modified except for the firmware enabling control of radio parameters.

The following radio parameters were used during test.

Band: 2.4 GHz

Antenna chain: 0

Standard: 802.11g

Bandwidth: 20 MHz

TX power: max. +17 dBm

Channel: 1 to 11

Control script and parameters was delivered by client.

Details	-
Supply voltage	100 – 240 VAC (120 VAC 60 Hz was used during tests)
Output voltage	20 VDC

1.2 I/O ports / cables to test specimen

I/O Port Cable	Type	Shielding	Cable length
USB-C branching out to HDMI and USB-A	Customer	Shielded	107 cm

1.3 Test set-up

The nominal input voltage to AT-DG2 is 5 VDC

Figure 1. Test set up.

The dotted lines at USB-A indicates that just one is in use at a time.

The dotted line from laptop indicates that this connection was only present during set up of radio, not during test.

2.3.1 Test setup

The test specimen was connected to a spectrum analyzer using a temporary antenna connector.

See photo of test set up in appendix 1.

The output power was measured at channel 7 at the different Data rates to establish worst case. Data rate 6, 9, 12, 18, 24, 36, 48 and 54 Mbit/s were tested. The other channels were tested at the found Data rate.

2.5.1 Test setup

The measurement was performed radiated in a semi anechoic chamber with absorbers on the floor.

The measuring distance was 3 m.

The EUT was placed on a non-conductive table, 1.5 m above the floor.

The test specimen was placed in the orientation giving the highest RF output at the fundamental frequency.

The measurements were performed at the edge of the nearest restricted band below and above the DTS band. Below at 2390 MHz and above at 2483.5 MHz.

3 MEASURING UNCERTAINTIES

Compliance evaluation is based on a shared risk principle with respect to the measurement uncertainty.

	Frequency [MHz]	Polarization	Expanded Uncertainty [dB] (k=2)
Radiated emission	30 - 200	Vertical	4.59
	200 - 1000	Vertical	4.77
	1000 - 18000	Vertical	3.76
	18000 - 25000	Vertical	4.10
	30 - 200	Horizontal	4.57
	200 - 1000	Horizontal	4.86
	1000 - 18000	Horizontal	3.77
	18000 - 26500	Horizontal	4.11
Conducted emission (CISPR 16-4)	0.01 - 30	-	3.44
Conducted emission (ESIB 26)	<1000		2.58
	1000 - 7000		2.76
	7000 - 18000		3.38
	18000 - 26500		3.79
