

Label and label location

At the key fob assembly, the label is embedded in the housing on the back of the unit (on the side opposite the buttons), below the customer logo.

The numbers are molded onto the outer surface of the lower plastic cover using interchangeable steel inserts in the injection mold. Two inserts are available: one featuring the Peterbilt logo and certification numbers, and another featuring the Kenworth logo and certification numbers.

The marked area matches the color and texture of the surrounding surface, while the numbers and logo are molded as raised or recessed elements to improve visibility and legibility.
