For LTE B26, as per KDB 971168 D02 specifically allows use of 300Hz RBW for measurements in the first 37.5kHz and requires 100kHz for measurements at more than 37.5KHz separation from the channel edge for Part 90S. a higher RBW 100kHz introduces a higher value for the first 37.5kHz, the test result is compliance when a higher RBW used, the test result is still compliance if a lower RBW used.
