2.5.5 Test Method and Operating Modes

The test was applied in accordance with the test requirements in clause 15.247 of FCC CFR 47 Part 15, Subpart C.

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.

The Spurious Conducted Emissions from the antenna terminal were measured. The frequency spectrum investigated from 30MHz to 25 GHz. The EUT was transmitted at maximum power to the Spectrum Analyser. The test span was set to 1.5*DTS bandwidth (6dB bandwidth). The detector and trace of spectrum analyser were set to Peak and Max Hold respectively. The peak point of the trace was measured and the markers positioned to give the -20dBc points of the displayed spectrum.

2.6 RADIATED EMISSIONS

2.6.1 Specification Reference

FCC CFR 47 Part 15, Clause 15.205, 15.209, 15.247(d)

2.6.2 Equipment Under Test

DB1016US, S/N: DMA30905140900022

2.6.3 Date of Test and Modification State

21 and 22 July 2015 – Modification State 0

2.6.4 Test Equipment Used

The major items of test equipment used for the above tests are identified in Section 3.1.

2.6.5 Test Method and Operating Modes

The test was applied in accordance with the requirements in clause 15.247 of FCC CFR 47 Part 15 Subpart C.

A preliminary profile of the Spurious Radiated Emissions was obtained by operating the EUT on a remotely controlled turntable within the chamber. Measurements of emissions from the EUT were obtained with the Measurement Antenna in both Horizontal and Vertical Polarisations.

Emissions identified within the range 30MHz – 25GHz were then formally measured using a Peak detector as the worst case.

In the frequency Range 30MHz – 25GHz, the measurement was performed with a resolution bandwidth of 1MHz.

The measurements were performed at a 3m distance unless otherwise stated.

The test was performed with the EUT in the following configurations and modes of operation:

Configuration 1 - Mode 1
 - Mode 2
 - Mode 3
 - Mode 4
 - Mode 5

2.6.6 Environmental Conditions

	21 July 2015	22 July 2015
Ambient Temperature	24.5°C	23.9°C
Relative Humidity	53.0%	56.0%

2.6.7 Test Results

For the period of test the EUT met the requirements of FCC CFR 47 Part 15 Radiated Spurious Emissions.

Note: Only the worst test results plots have been included as all of the emissions are greater than 20dB below the limit. A set of plots have been included to show the measurement system noise floor.

The test results are shown below.

802.11b

Configuration 1 - Mode 1

No emissions were detected within 20dB of the limit.

Configuration 1 - Mode 2

30MHz – 1GHz

1GHz – 3GHz

Note: The emission beyond the limit is the operating frequency.

3GHz – 18GHz

18GHz – 25GHz

No emissions were detected within 20dB of the limit.

Configuration 1 - Mode 3802. 11g/n(HT20)Configuration 1 - Mode 1, 2 & 3

No emissions were detected within 20dB of the limit.

802. 11n(HT40)Configuration 1 - Mode 4, 5 & 6

No emissions were detected within 20dB of the limit.

Frequency range	Limit
30 MHz to 88 MHz	40dBμV/m
88 MHz to 216 MHz	43.5dBμV/m
216 MHz to 960 MHz	46dBμV/m
>960MHz	Average:54dBμV/m, Peak:74dBμV/m

Remarks

The test result of EUT did not exceed the limit during the test.
