## RF Exposure Evaluation Report

**Application No.:** SZEM1507004224CR  
**Applicant:** Zhuhai Pantum Electronics Co.,Ltd.  
**Manufacturer/Factory:** Zhuhai Pantum Electronics Co.,Ltd.  
**Product Name:** Monochrome Laser Printer  
**Model No.(EUT):** P3500DWT  
**Add Model No.:** P3500D, P3502D, P3505D, P3506D, P3507D, P3508D, P3509D, P3500DN,  
P3502DN, P3505DN, P3506DN, P3507DN, P3508DN, P3509DN, P3500DW,  
P3502DW, P3505DW, P3500DNT  
**Trade Mark:** PANTUM  
**FCC ID:** 2AEGOPANTUM-3  
**Standards:** 47 CFR Part 1.1307 (2014)  
47 CFR Part 1.1310 (2014)  
**Date of Receipt:** 2015-07-16  
**Date of Test:** 2015-07-22 to 2015-07-27  
**Date of Issue:** 2015-08-14

|                      |              |
|----------------------|--------------|
| <b>Test Result :</b> | <b>PASS*</b> |
|----------------------|--------------|

\* In the configuration tested, the EUT complied with the standards specified above.

Authorized Signature:

Jack Zhang  
EMC Laboratory Manager

The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or testing done by SGS International Electrical Approvals in connection with, distribution or use of the product described in this report must be approved by SGS International Electrical Approvals in writing.

The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. All test results in this report can be traceable to National or International Standards.

Report No.: SZEM150700422402

Page: 5 of 9

Remark:

Model No.: P3500D, P3502D, P3505D, P3506D, P3507D, P3508D, P3509D, P3500DN, P3502DN, P3505DN, P3506DN, P3507DN, P3508DN, P3509DN, P3500DW, P3502DW, P3505DW, P3500DWT, P3500DNT

Only the model P3500DWT was tested, since the electrical circuit design, layout, components used and internal wiring were identical for the above models, only different on detail information as below:

| Item | Model No. | Speed | Appearance            | Interface                           | Voltage                                                                                                           |
|------|-----------|-------|-----------------------|-------------------------------------|-------------------------------------------------------------------------------------------------------------------|

### **4.3 Test Location**

All tests were performed at:

SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch E&E Lab

No. 1 Workshop, M-10, Middle section, Science & Technology Park, Shenzhen, Guangdong, China  
518057

Telephone: +86 (0) 755 2601 2053 Fax: +86 (0) 755 2671 0594

No tests were sub-contracted.

#### **4.4 Test Facility**

The test facility is recognized, certified, or accredited by the following organizations:

- **CNAS (No. CNAS L2929)**

CNAS has accredited SGS-CSTC Standards Technical Services Co., Ltd. Shenzhen Branch EMC Lab to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories (CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.

- **VCCI**

The 10m Semi-anechoic chamber and Shielded Room (7.5m x 4.0m x 3.0m) of SGS-CSTC Standards Technical Services Co., Ltd. have been registered in accordance with the Regulations for Voluntary Control Measures with Registration No.: G-823, R-4188, T-1153 and C-2383 respectively.

- **FCC – Registration No.: 556682**

SGS-CSTC Standards Technical Services Co., Ltd., Shenzhen EMC Laboratory has been registered and fully described in a report filed with the (FCC) Federal Communications Commission. The acceptance letter from the FCC is maintained in our files. Registration No.: 556682.

- **Industry Canada (IC)**

Two 3m Semi-anechoic chambers of SGS-CSTC Standards Technical Services Co., Ltd. have been registered by Certification and Engineering Bureau of Industry Canada for radio equipment testing with Registration No.: 4620C-2.

#### **4.5 Deviation from Standards**

None.

#### **4.6 Abnormalities from Standard Conditions**

None.

#### **4.7 Other Information Requested by the Customer**

None.

## 5 RF Exposure Evaluation

### 5.1 RF Exposure Compliance Requirement

#### 5.1.1 Limits

According to FCC Part1.1310: The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in part1.1307(b)

TABLE 1—LIMITS FOR MAXIMUM PERMISSIBLE EXPOSURE (MPE)

| Frequency range<br>(MHz)                                | Electric field<br>strength<br>(V/m) | Magnetic field<br>strength<br>(A/m) | Power density<br>(mW/cm <sup>2</sup> ) | Averaging time<br>(minutes) |
|---------------------------------------------------------|-------------------------------------|-------------------------------------|----------------------------------------|-----------------------------|
| (A) Limits for Occupational/Controlled Exposures        |                                     |                                     |                                        |                             |
| 0.3–3.0 .....                                           | 614                                 | 1.63                                | *(100)                                 | 6                           |
| 3.0–30 .....                                            | 1842/f                              | 4.89/f                              | *(900/f <sup>2</sup> )                 | 6                           |
| 30–300 .....                                            | 61.4                                | 0.163                               | 1.0                                    | 6                           |
| 300–1500 .....                                          | .....                               | .....                               | f/300                                  | 6                           |
| 1500–100,000 .....                                      | .....                               | .....                               | 5                                      | 6                           |
| (B) Limits for General Population/Uncontrolled Exposure |                                     |                                     |                                        |                             |
| 0.3–1.34 .....                                          | 614                                 | 1.63                                | *(100)                                 | 30                          |
| 1.34–30 .....                                           | 824/f                               | 2.19/f                              | *(180/f <sup>2</sup> )                 | 30                          |
| 30–300 .....                                            | 27.5                                | 0.073                               | 0.2                                    | 30                          |
| 300–1500 .....                                          | .....                               | .....                               | f/1500                                 | 30                          |
| 1500–100,000 .....                                      | .....                               | .....                               | 1.0                                    | 30                          |

F= Frequency in MHz

Friis Formula

Friis transmission formula:  $P_d = (P_{out} * G) / (4 * \pi * R^2)$

Where

$P_d$  = power density in mW/cm<sup>2</sup>

$P_{out}$  = output power to antenna in mW

G = gain of antenna in linear scale

$\pi$  = 3.1416

R = distance between observation point and center of the radiator in cm

$P_d$  is the limit of MPE, 1 mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance r where the MPE limit is reached.

#### 5.1.2 Test Procedure

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.

### 5.1.3 EUT RF Exposure Evaluation

Antenna Gain: 2dBi

Antenna Gain: The maximum Gain measured in fully anechoic chamber is 1.5849 in linear scale.

Output Power Into Antenna & RF Exposure Evaluation Distance:

802.11b mode:

| Channel | Frequency (MHz) | Max Conducted Peak Output Power (dBm) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) | Limit | Result |
|---------|-----------------|---------------------------------------|------------------------------|--------------------------------------------------|-------|--------|
| Highest | 2462            | 18.96                                 | 78.70                        | 0.0248                                           | 1.0   | PASS   |

802.11g mode:

| Channel | Frequency (MHz) | Max Conducted Peak Output Power (dBm) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) | Limit | Result |
|---------|-----------------|---------------------------------------|------------------------------|--------------------------------------------------|-------|--------|
| Highest | 2462            | 20.28                                 | 106.66                       | 0.0336                                           | 1.0   | PASS   |

802.11n(HT20)mode:

| Channel | Frequency (MHz) | Max Conducted Peak Output Power (dBm) | Output Power to Antenna (mW) | Power Density at R = 20 cm (mW/cm <sup>2</sup> ) | Limit | Result |
|---------|-----------------|---------------------------------------|------------------------------|--------------------------------------------------|-------|--------|
| Highest | 2462            | 20.28                                 | 106.66                       | 0.0336                                           | 1.0   | PASS   |

Note: Refer to report No. SZEM150700422401 for EUT test Max Conducted Peak Output Power value.

The distancer (4th column) calculated from the Fries transmission formula is far greater than 20 cm separation requirement.
