

## **FCC RF EXPOSURE REPORT**

*For*

**Car Radio**

**MODEL NUMBER: New Radio Ultra Low SBT**

**FCC ID: 2AEQT-TR7229-71**

**REPORT NUMBER: 4788645536-9**

**ISSUE DATE: September 12, 2018**

*Prepared for*

**Huizhou Desay SV Automotive Co., Ltd.  
NO.103, Hechang 5th Road West, Zhongkai National Hi-tech Industrial  
Development Zone, Huizhou, Guangdong, P.R. China**

*Prepared by*

## 1. ATTESTATION OF TEST RESULTS

### Applicant Information

Company Name: Huizhou Desay SV Automotive Co., Ltd.  
Address: NO.103, Hechang 5th Road West, Zhongkai National Hi-tech Industrial Development Zone, Huizhou, Guangdong, P.R. China

### Manufacturer Information

Company Name: Huizhou Desay SV Automotive Co., Ltd.  
Address: NO.103, Hechang 5th Road West, Zhongkai National Hi-tech Industrial Development Zone, Huizhou, Guangdong, P.R. China

### EUT Description

Product Name: Car Radio  
Brand Name: Volkswagen, DESAY SV AUTOMOTIVE  
Model Name: New Radio Ultra Low SBT  
Sample ID: 1775114  
Sample Status: Normal  
Sample Received date: August 24, 2018  
Date Tested: August 25, 2018 ~ September 4, 2018

| APPLICABLE STANDARDS |              |
|----------------------|--------------|
| STANDARD             | TEST RESULTS |
| FCC 47CFR§2.1091     | Complies     |

Tested By:

Denny Huang  
Engineer Project Associate

Checked By:

Shawn Wen  
Laboratory Leader

Approved By:

Stephen Guo  
Laboratory Manager

## 2. TEST METHODOLOGY

The tests documented in this report were performed in accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091.

## 3. FACILITIES AND ACCREDITATION

|                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

## 4. REQUIREMENT

### LIMIT AND CALCULATION METHOD

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.  
Limits for General Population/Uncontrolled Exposure

### RF EXPOSURE LIMIT

| Frequency Range (MHz) | E-field Strength (E) (V/m) | Magnetic Field Strength (H) (A/m) | Power Density (S) (mW/cm <sup>2</sup> ) | Averaging Time  E  <sup>2</sup> ,  H  <sup>2</sup> or S (Minutes) |
|-----------------------|----------------------------|-----------------------------------|-----------------------------------------|-------------------------------------------------------------------|
| 0.3 -- 1.34           | 614                        | 1.63                              | (100)*                                  | 30                                                                |
| 1.34 -- 30            | 824/f                      | 2.19/f                            | (180/f <sup>2</sup> )*                  | 30                                                                |
| 30 -- 300             | 27.5                       | 0.073                             | 0.2                                     | 30                                                                |
| 300 -- 1500           | --                         | --                                | f/1500                                  | 30                                                                |
| 1500 -- 100,000       | --                         | --                                | 1.0                                     | 30                                                                |

### CALCULATION METHOD

$$S = PG / 4\pi R^2$$

Where:

S=power density

P=power input to antenna

G=power gain of the antenna in the direction of interest relative to an isotropic radiator

R=distance to the center of radiation of the antenna

### **CALCULATED RESULTS**

| BLE Mode  |              |              |                    |                    |             |
|-----------|--------------|--------------|--------------------|--------------------|-------------|
| Frequency | Output Power | Output Power | Power Density      | Limit              | Test Result |
| MHz       | dBm          | mW           | mW/cm <sup>2</sup> | mW/cm <sup>2</sup> | --          |
| 2480      | 7.5          | 5.62         | 0.001              | 1.0                | Complies    |

Note: 1. Antenna Gain=0.4dBi (Numeric 1.10),  $\pi=3.141$ .  
2. The Power comes from turn up power which declared by customer.  
3. The minimum separation distance of the device is greater than 20 cm.  
4. Calculate by WORST-CASE mode.

**END OF REPORT**
