

TEST REPORT

Test Report No. : UL-RPT-RP10874323JD07A

Manufacturer : ModCam AB
Model No. : MOD.01
FCC ID : 2AEV4-01
Technology : WLAN
Test Standard(s) : FCC Parts 15.207, 15.209(a) & 15.407

1. This test report shall not be reproduced in full or partial, without the written approval of UL VS LTD.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 1.0

Date of Issue: 08 March 2016

Checked by:

Sarah Williams
Engineer, Radio Laboratory

Company Signatory:

Steven White
Service Lead, Radio Laboratory
UL VS LTD

This laboratory is accredited by UKAS.
The tests reported herein have been
performed in accordance with its terms
of accreditation.

1. Customer Information

Company Name:	ModCam AB
Address:	Bredgatan 4 211 30 Malmö Sweden

2. Summary of Testing

2.1. General Information

Specification Reference:	47CFR15.407 and 47CFR15.403
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart E (Unlicensed National Information Infrastructure Devices) – Sections 15.403 and 15.407
Specification Reference:	47CFR15.207 and 47CFR15.209
Specification Title:	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Sections 15.207 and 15.209
Site Registration:	209735
Location of Testing:	UL VS LTD, Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom
Test Dates:	30 August 2015 to 04 March 2016

2.2. Summary of Test Results

FCC Reference (47CFR)	Measurement	Result
Part 15.207	Transmitter AC Conducted Emissions	
Part 15.403(i)	Transmitter 26 dB Emission Bandwidth	
Part 15.35(c)	Transmitter Duty Cycle	Note 1
Part 15.407(a)(1)(iv)	Transmitter Maximum Conducted Output Power (5.15-5.25 GHz band)	
Part 15.407(a)(2)	Transmitter Maximum Conducted Output Power (5.25-5.35 GHz & 5.47-5.725 GHz bands)	
Part 15.407(a)(1)(iv)	Transmitter Maximum Power Spectral Density (5.15-5.25 GHz band)	
Part 15.407(a)(2)	Transmitter Maximum Power Spectral Density (5.25-5.35 GHz & 5.47-5.725 GHz bands)	
Part 15.407(b)/15.209(a)	Transmitter Out of Band Radiated Emissions	
Part 15.407(b)/15.209(a)	Transmitter Band Edge Radiated Emissions	
Part 15.407(g)	Transmitter Frequency Stability (Temperature & Voltage Variation)	Note 2
Part 15.407(h)(1)	Transmitter Power Control	Note 3
Key to Results  = Complied  = Did not comply		

Note(s):

1. The measurement was performed to assist in the calculation of the level of average output power, power spectral density and emissions as the EUT employs pulsed operation.
2. Frequency stability is better than 20 ppm which ensures that the signal remains in the allocated bands under all operational conditions stated in the user manual.
3. Transmit Power Control was not tested as the maximum EIRP is less than 500 mW (27 dBm).

2.3. Methods and Procedures

Reference:	ANSI C63.10-2013
Title:	American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices
Reference:	KDB 789033 D02 General U-NII Test Procedures New Rules v01r01 January 8, 2016
Title:	Guidelines for Compliance Testing of Unlicensed National Information Infrastructure (U-NII) Devices – Part 15, Subpart E

2.4. Deviations from the Test Specification

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specifications identified above.

3. Equipment Under Test (EUT)

3.1. Identification of Equipment Under Test (EUT)

Brand Name:	ModCam
Model Name or Number:	MOD.01
Test Sample Serial Number:	MC000170 (<i>Radiated sample #1</i>)
Hardware Version:	2.0
Software Version:	114
FCC ID:	2AEV4-01

Brand Name:	ModCam
Model Name or Number:	MOD.01
Test Sample Serial Number:	01001716 (<i>Radiated sample #2</i>)
Hardware Version:	2.0
Software Version:	114
FCC ID:	2AEV4-01

Brand Name:	ModCam
Model Name or Number:	MOD.01
Test Sample Serial Number:	MC000058 (<i>Conducted sample with RF port #1</i>)
Hardware Version:	2.0
Software Version:	114
FCC ID:	2AEV4-01

Brand Name:	ModCam
Model Name or Number:	MOD.01
Test Sample Serial Number:	0100174A (<i>Conducted sample with RF port #2</i>)
Hardware Version:	2.0
Software Version:	114
FCC ID:	2AEV4-01

3.2. Description of EUT

The equipment under test was an IP camera which incorporated the following wireless technologies; *Bluetooth, Bluetooth LE, GPS, WLAN 2.4 GHz and 5 GHz bands.*

3.3. Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

3.4. Additional Information Related to Testing

Technology Tested:	WLAN (IEEE 802.11a,n) / U-NII		
Type of Unit:	Transceiver		
Modulation:	BPSK, QPSK, 16QAM & 64QAM		
Data rates:	802.11a	6, 9, 12, 18, 24, 36 ,48 & 54 Mbps	
	802.11n HT20	MCS0 to MCS7 (1 spatial stream)	
	802.11n HT40	MCS0 to MCS7 (1 spatial stream)	
Power Supply Requirement(s):	Nominal	3.8 VDC via 120 VAC 60 Hz adaptor	
Antenna Gains:	5.15 to 5.35 GHz	-3.3 dBi	
	5.47 to 5.725 GHz	1.3 dBi	
Maximum Conducted Output Power:	20 MHz	13.6 dBm	
	40 MHz	14.1 dBm	
Channel Spacing:	20 MHz		
Transmit Frequency Band:	5150 MHz to 5250 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	36	5180
	Middle	40	5200
	Top	48	5240
Transmit Frequency Band:	5250 MHz to 5350 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	52	5260
	Middle	56	5280
	Top	64	5320
Transmit Frequency Band:	5470 MHz to 5725 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	100	5500
	Middle	116	5580
	Top	140	5700

Additional Information Related to Testing (continued)

Channel Spacing:	40 MHz		
Transmit Frequency Band:	5150 MHz to 5250 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	38	5190
	Top	46	5230
Transmit Frequency Band:	5250 MHz to 5350 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	54	5270
	Top	62	5310
Transmit Frequency Band:	5470 MHz to 5725 MHz		
Transmit Channels Tested:	Channel ID	Channel Number	Channel Frequency (MHz)
	Bottom	102	5510
	Middle	110	5550
	Top	134	5670

3.5. Support Equipment

The following support equipment was used to exercise the EUT during testing:

Description:	Test laptop
Brand Name:	Hewlett Packard
Model Name or Number:	Compaq 6910p
Serial Number:	HUB7451SGN

Description:	USB Cable
Brand Name:	SONY
Model Name or Number:	EC450
Serial Number:	132112D80289990

Description:	AC Charger
Brand Name:	SONY
Model Name or Number:	EP880
Serial Number:	8512W32 101946 SEM0600

4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- Continuously transmitting with a modulated carrier at maximum power on the bottom, middle and top channels as required using the supported data rates/modulation types.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- Controlled using a terminal application on the laptop PC along with instructions provided by the customer. The instructions were called *"How to set to WLAN continuous signal 01 Oct 2015.docx"* dated 13 January 2016.
- The terminal application was used to enable a continuous transmission mode and to select the test channels, data rates and modulation schemes as required.
- In order for all test cases to meet their respective limits, the power settings have been specified in section 4.3 of this report. When the EUT was placed in closed loop it was set to the maximum possible power that it would support.
- All supported modes and channel widths were initially investigated on one channel. The modes that produced the highest power and widest bandwidth for all bands were:
 - o Highest output power and power spectral density
 - 802.11a – QPSK / 12 Mbps
 - 802.11n HT20 – 16QAM / MCS4
 - 802.11n HT40 – BPSK / MCS0
 - o Widest bandwidth
 - 802.11a – BPSK / 9 Mbps
 - 802.11n HT20 – BPSK / MCS0
 - 802.11n HT40 – BPSK / MCS0

Pre-scan results for all modes are archived on the Company server and available for inspection if required.

- RF cables and attenuators connecting the test equipment to the EUT were calibrated before use and the calibration data incorporated into the conducted measurement results.
- Transmitter spurious emissions were performed with the EUT transmitting with a data rate of MCS4 (802.11n HT20). This was found to be the worst case modulation scheme with regards to emissions after preliminary investigations and, as this mode emits the highest power spectral density, it was deemed to be the worst case.
- Transmitter radiated emissions were performed with the EUT connected to its AC charger and USB cable. The AC charger was powered by 120 VAC 60 Hz.
- The conducted sample with serial number MC000058 was used for 26 dB bandwidth and duty cycle tests.
- The conducted sample with serial number 0100174A was used for maximum conducted output power and peak power spectral density tests.

Configuration and Peripherals (continued)

- The radiated sample with serial number MC000170 was used for ac conducted spurious emissions and radiated emissions < 1 GHz tests.
- The radiated sample with serial number 01001716 was used for all other tests.

4.3. Power Settings

The power settings below have been used for testing:

U-NII Band 1 (5150 to 5250 MHz)

Mode	Bottom channel 5180 MHz	Middle channel 5200 MHz	Top Channel 5240 MHz
802.11a	11 dBm	11 dBm	11 dBm
802.11n HT20	11 dBm	11 dBm	11 dBm
	Bottom channel 5190 MHz	Top Channel 5230 MHz	
802.11n HT40	11 dBm	11 dBm	

U-NII Band 2A (5250 to 5350 MHz)

Mode	Bottom channel 5260 MHz	Middle channel 5280 MHz	Top Channel 5320 MHz
802.11a	11 dBm	11 dBm	11 dBm
802.11n HT20	11 dBm	11 dBm	11 dBm
	Bottom channel 5270 MHz	Top Channel 5310 MHz	
802.11n HT40	11 dBm	11 dBm	

U-NII Band 2C (5470 to 5725 MHz)

Mode	Bottom channel 5500 MHz	Middle channel 5580 MHz	Top Channel 5700 MHz
802.11a	Closed loop	Closed loop	Closed loop
802.11n HT20	Closed loop	Closed loop	Closed loop
	Bottom channel 5510 MHz	Middle channel 5550 MHz	Top Channel 5670 MHz
802.11n HT40	Closed loop	Closed loop	Closed loop

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6 Measurement Uncertainty* for details.

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

5.2. Test Results

5.2.1. Transmitter AC Conducted Spurious Emissions

Test Summary:

Test Engineers:	Andrew Edwards & Kiren Mistry	Test Date:	22 September 2015
Test Sample Serial Number:	MC000170		

FCC Reference:	Part 15.207
Test Method Used:	ANSI C63.10 Section 6.2

Environmental Conditions:

Temperature (°C):	21
Relative Humidity (%):	52

Note(s):

1. The EUT was plugged into a USB cable which is connected to an AC charger. The AC charger was connected to 120 VAC 60 Hz single phase supply via a LISN.
2. Pre-scans were performed and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results entered into the tables below.
3. A pulse limiter was fitted between the LISN and the test receiver.

Test setup:

Transmitter AC Conducted Spurious Emissions (continued)**Results: Live / Quasi Peak**

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.150	Live	56.0	66.0	10.0	Complied
0.155	Live	55.5	65.8	10.3	Complied
0.258	Live	45.2	61.5	16.3	Complied
0.438	Live	18.5	57.1	38.6	Complied
0.582	Live	13.7	56.0	42.3	Complied

Results: Live / Average

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.155	Live	28.5	55.8	27.3	Complied
0.209	Live	22.9	53.3	30.4	Complied
0.290	Live	18.7	50.5	31.8	Complied
0.461	Live	8.5	46.7	38.2	Complied
1.176	Live	6.0	46.0	40.0	Complied

Transmitter AC Conducted Spurious Emissions (continued)**Results: Neutral / Quasi Peak**

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.155	Neutral	55.2	65.8	10.6	Complied
0.177	Neutral	53.4	64.6	11.2	Complied
0.330	Neutral	12.9	59.5	46.6	Complied
0.452	Neutral	14.2	56.8	42.6	Complied
0.965	Neutral	8.5	56.0	47.5	Complied
1.298	Neutral	8.5	56.0	47.5	Complied

Results: Neutral / Average

Frequency (MHz)	Line	Level (dBμV)	Limit (dBμV)	Margin (dB)	Result
0.155	Neutral	25.1	55.8	30.7	Complied
0.182	Neutral	24.7	54.4	29.7	Complied
0.258	Neutral	17.4	51.5	34.1	Complied
0.483	Neutral	8.0	46.3	38.3	Complied
0.632	Neutral	4.5	46.0	41.5	Complied
1.149	Neutral	5.2	46.0	40.8	Complied

Transmitter AC Conducted Spurious Emissions (continued)**Live****Neutral**

Note: These plots are pre-scans and for indication purposes only. For final measurements, see accompanying tables.

Test Equipment Used:

Asset No.	Instrument	Manufacturer	Type No.	Serial No.	Date Calibration Due	Cal. Interval (Months)
M1625	Thermohygrometer	JM Handelspunkt	30.5015.06	None stated	07 Jan 2016	12
A649	LISN	Rohde & Schwarz	ESH3-Z5	825562/008	14 Jul 2016	12

M1263	Test Receiver	Rohde & Schwarz	ESIB7	100265	14 Oct 2015	12

5.2.2. Transmitter 26 dB Emission Bandwidth**Test Summary:**

Test Engineer:	Andrew Edwards	Test Dates:	14 September 2015 & 21 September 2015
Test Sample Serial Number:	MC000058		

FCC Reference:	Part 15.403(i)
Test Method Used:	KDB 789033 D02 Section II.C.1.

Environmental Conditions:

Temperatures (°C):	23 to 27
Relative Humidity (%):	34 to 52

Note(s):

1. All configurations supported by the EUT were investigated on the one channel in accordance with KDB 789033 Section II.C.1. Emission Bandwidth (EBW) test procedure. The data rates that produced the widest bandwidth and therefore deemed worst case were:
 - o 802.11a – BPSK / 9 Mbps
 - o 802.11n HT20 – BPSK / MCS0
 - o 802.11n HT40 – BPSK / MCS0
2. Final measurements were performed in each supported operating band using the above configurations on the bottom, middle and top channels.
3. For 20 MHz measurements the signal analyser resolution bandwidth was set to 200 kHz (approximately 1% of the emission bandwidth) and video bandwidth 1 MHz. A peak detector was used, sweep time set to auto and trace mode was Max Hold. The span was set to 35 MHz. The emission bandwidth was measured at 26 dB down from the peak of the signal.
4. For 40 MHz measurements the signal analyser resolution bandwidth was set to 500 kHz (approximately 1% of the emission bandwidth) and video bandwidth 2 MHz. A peak detector was used, sweep time set to auto and trace mode was Max Hold. The span was set to 75 MHz. The emission bandwidth was measured at 26 dB down from the peak of the signal.
5. The signal analyser was connected to the RF port on the EUT using suitable attenuation and RF cable.
6. Plots for all data rates are archived on the Company server and available for inspection upon request.
7. For the power measurements in this report, the highest power output level was recorded when the EUT was configured as:
 - o 802.11a – QPSK / 12 Mbps
 - o 802.11n HT20 – 16QAM / MCS4

Emission bandwidth plots for these configurations have been included as 'Reference plots' at the end of this section and the results used for calculations on Section 5.2.4.

Transmitter 26 dB Emission Bandwidth (continued)**Test setup:**

Transmitter 26 dB Emission Bandwidth (continued)**Results: 802.11a / 20 MHz / 5.15-5.25 GHz band**

Channel	Frequency (MHz)	Modulation scheme	Data Rate Mbps	26 dB Emission Bandwidth (MHz)

5.2.3. Transmitter Duty Cycle**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	03 September 2015
Test Sample Serial Number:	MC000058		

FCC Reference:	Part 15.35(c)
Test Method Used:	KDB 789033 D02 Section II.B.2.b)

Environmental Conditions:

Temperature (°C):	27
Relative Humidity (%):	34

Note(s):

1. In order to assist with the determination of the average level of fundamental and spurious emissions field strength, measurements were made of duty cycle to determine the transmission duration and the silent period time of the transmitter. The transmitter duty cycle was measured using a spectrum analyser in the time domain and calculated by using the following calculation:

$$10 \log 1 / (\text{On Time} / [\text{Period or } 100 \text{ ms whichever is the lesser}])$$

$$802.11a / 9 \text{ Mbps duty cycle: } 10 \log (1 / (941.010 \mu\text{s} / 1040.430 \mu\text{s})) = 0.4$$

$$802.11a / 12 \text{ Mbps duty cycle: } 10 \log (1 / (707.100 \mu\text{s} / 805.940 \mu\text{s})) = 0.6$$

$$802.11n \text{ HT20} / \text{MCS0 duty cycle: } 10 \log (1 / (1181.300 \mu\text{s} / 1280.430 \mu\text{s})) = 0.3$$

$$802.11n \text{ HT20} / \text{MCS4 duty cycle: } 10 \log (1 / (226.891 \mu\text{s} / 326.022 \mu\text{s})) = 1.6$$

$$802.11n \text{ HT40} / \text{MCS0 duty cycle: } 10 \log (1 / (586.880 \mu\text{s} / 685.430 \mu\text{s})) = 0.7$$

2. Plots below are for data rates with a duty cycle less than 98%. Results for all other modes are archived on the Company server and available for inspection if required.

5.2.4. Transmitter Maximum Conducted Output Power**Test Summary:**

Test Engineer:	Keith Tucker	Test Date:	04 February 2016
Test Sample Serial Number:	0100174A		

FCC Reference:	Part 15.407(a)(1)(iv)
Test Method Used:	KDB 789033 D02 Section II.E.2.d)

Environmental Conditions:

Temperature (°C):	25
Relative Humidity (%):	35

Note(s):

1. All supported modes and channel widths were initially investigated on one channel. The modes that produced the highest power and therefore deemed worst case were:

- o 802.11a – QPSK / 12 Mbps
- o 802.11n HT20 – 16QAM / MCS4
- o 802.11n HT40 – BPSK / MCS0

Measurements were then performed in these modes on bottom, middle and top channels in all operating bands.

2. As the duty cycle is < 98%, conducted output power measurements were performed in accordance with FCC KDB 789033 II.E.2.d) Method SA-2. The test receiver's integration function was used to integrate across the 26 dB emission bandwidth. The resolution bandwidth was set to 1 MHz and video bandwidth 3 MHz. An RMS detector was used and sweep time was set to auto and 300 traces performed. The span was set to encompass the 26 dB emission bandwidth. The channel power results are recorded in the tables below.
3. The calculated duty cycle in section 5.2.3 was added to the measured power in order to compute the average power during the actual transmission time.
4. The EUT antenna has a gain of <6 dBi.
5. The test receiver was connected to the RF port on the EUT using suitable attenuation and RF cable. An RF level offset was entered on the test receiver to compensate for the loss of the attenuator and RF cable.
6. The Part 15.407(a)(1)(iv) limit shall not exceed 250 mW (24.0 dBm).

**Bottom Channel****Top Channel**

Transmitter Maximum Conducted Output Power (5.25-5.35 GHz & 5.47-5.725 GHz bands)**Test Summary:**

Test Engineer:	Keith Tucker	Test Date:	04 February 2016
Test Sample Serial Number:	0100174A		

FCC Reference:	Part 15.407(a)(2)
Test Method Used:	KDB 789033 D02 Section II.E.2.d)

Environmental Conditions:

Temperature (°C):	25
Relative Humidity (%):	35

Note(s):

1. The FCC Part 15.407(a)(2) limit is the lesser of 250 mW (24.0 dBm) or $11 \text{ dBm} + 10 \log_{10} B$, where B is the previously measured 26 dB emission bandwidth in MHz. The limit for each channel was calculated as below:

5.25-5.35 GHz band

802.11a 20 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 18.842 = 23.75 \text{ dBm}$
 802.11a 20 MHz channel width / Middle channel = $11 \text{ dBm} + 10 \log_{10} 18.842 = 23.75 \text{ dBm}$
 802.11a 20 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 18.944 = 23.77 \text{ dBm}$
 802.11n 20 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 19.197 = 23.83 \text{ dBm}$
 802.11n 20 MHz channel width / Middle channel = $11 \text{ dBm} + 10 \log_{10} 19.197 = 23.83 \text{ dBm}$
 802.11n 20 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 19.146 = 23.82 \text{ dBm}$
 802.11n 40 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 41.900 = 27.22 \text{ dBm}$
 802.11n 40 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 44.390 = 27.47 \text{ dBm}$

5.47-5.725 GHz band

802.11a 20 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 19.045 = 23.80 \text{ dBm}$
 802.11a 20 MHz channel width / Middle channel = $11 \text{ dBm} + 10 \log_{10} 18.944 = 23.77 \text{ dBm}$
 802.11a 20 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 19.096 = 23.81 \text{ dBm}$
 802.11n 20 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 19.247 = 23.84 \text{ dBm}$
 802.11n 20 MHz channel width / Middle channel = $11 \text{ dBm} + 10 \log_{10} 19.247 = 23.84 \text{ dBm}$
 802.11n 20 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 19.197 = 23.83 \text{ dBm}$
 802.11n 40 MHz channel width / Bottom channel = $11 \text{ dBm} + 10 \log_{10} 47.000 = 27.72 \text{ dBm}$
 802.11n 40 MHz channel width / Middle channel = $11 \text{ dBm} + 10 \log_{10} 45.040 = 27.54 \text{ dBm}$
 802.11n 40 MHz channel width / Top channel = $11 \text{ dBm} + 10 \log_{10} 44.830 = 27.52 \text{ dBm}$

For 20 MHz channels the calculated limit was applied to the results as they were below the fixed limit.
 For 40 MHz channels the fixed limit of 250 mW (24.0 dBm) was applied to the results.

5.2.5. Transmitter Maximum Power Spectral Density**Test Summary:**

Test Engineer:	Keith Tucker	Test Date:	04 February 2016
Test Sample Serial Number:	0100174A		

FCC Reference:	Part 15.407(a)(1)(iv)
Test Method Used:	KDB 789033 D02 Section II.F referencing II.E.2.d

Environmental Conditions:

Temperature (°C):	25
Relative Humidity (%):	35

Note(s):

1. Transmitter Maximum Power Spectral Density tests in all bands were performed using a test receiver in accordance with KDB 789033 II. F referencing II.E.2.d) Method SA-2.
2. All supported modes and channel widths were initially investigated on one channel. The modes that produced the highest power and therefore deemed worst case were:
 - o 802.11a – QPSK / 12 Mbps
 - o 802.11n HT20 – 16QAM / MCS4
 - o 802.11n HT40 – BPSK / MCS0

Measurements were then performed in these modes on bottom, middle and top channels in all operating bands.

3. The EUT was transmitting at <98% duty cycle, the calculated duty cycle in section 5.2.3 was added to the measured maximum power spectral density in order to compute the average maximum power spectral density during the actual transmission time.
4. The EUT antenna has a gain of <6 dBi.
5. The signal analyser was connected to the RF port on the EUT using suitable attenuation and RF cable. An RF level offset was entered on the signal analyser to compensate for the loss of the attenuator and RF cable.
6. As the power spectral density test uses the same test method as the output power test, before the power is integrated across the emission bandwidth, the conducted power spectral density plots are located in the conducted output power section 5.2.4 of this test report. The peak spectral density was measured by placing a marker on the peak of the signal and the results entered in the tables below.

5.2.6. Transmitter Out of Band Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	30 August 2015
Test Sample Serial Number:	MC000170		

FCC Reference:	Parts 15.407(b)(3),(6),(7) & 15.209(a)
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.5
Frequency Range:	30 MHz to 1000 MHz

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	42

Note(s):

1. Measurements below 1 GHz were limited to the 5.47-5.725 GHz band, the EUT was transmitting with a data rate of MCS4 (802.11n HT20) as it produced the highest conducted power spectral density and was therefore deemed worst case.
2. Pre-scans with the EUT transmitting on the middle channel were measured according to FCC Part 15.407(b)(3) which states for transmitters operating in the band 5.47 to 5.725 GHz: all emissions outside of the band 5.47 to 5.725 GHz band shall not exceed -27 dBm/MHz. Part (b)(6) states unwanted emissions below 1 GHz must comply with the general field strength limits set forth in 15.209. Part (b)(7) states the provisions of 15.205 apply, e.g. restricted bands of operation.
3. The final measured value, for the given emission in the field strength result tables, incorporates the calibrated antenna factor and cable loss.
4. The preliminary scans showed similar emission levels below 1 GHz, for each channel of operation. Therefore final radiated emissions measurements were performed with the EUT set to the middle channel only.
5. All other emissions shown on the pre-scan plots were found to be below the measurement system noise floor or ambient.
6. Measurements below 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
7. Pre-scans were performed and markers placed on the highest measured levels. The test receiver resolution bandwidth was set to 100 kHz and video bandwidth 300 kHz. The sweep time was set to auto. A peak detector was used, sweep time was set to auto and trace mode was Max Hold.
8. Final measurements were performed on the marker frequencies and the results entered into the table below. The test receiver resolution bandwidth was set to 120 kHz, using a CISPR quasi-peak detector and span big enough to see the whole emission.

Transmitter Out of Band Radiated Emissions (5.15-5.25 GHz band operation) (continued)**Test Summary:**

Test Engineer:	Kiren Mistry	Test Dates:	09 February 2016 & 22 February 2016
Test Sample Serial Number:	01001716		

FCC Reference:	Part 15.407(b)(1),(7) & 15.209(a)
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.6
Frequency Range:	1 GHz to 40 GHz

Environmental Conditions:

Temperature (°C):	23 to 24
Relative Humidity (%):	32 to 35

Note(s):

1. FCC Part 15.407(b)(1) states for transmitters operating in the band 5.15 to 5.25 GHz: all emissions outside of the band 5.15 to 5.35 GHz will not exceed -27 dBm/MHz. Part(b)(7) states the provisions of 15.205 apply e.g. restricted bands of operation.
2. Pre-scans were performed with the EUT transmitting on middle channel in the 5.47 to 5.725 GHz band. An inquiry was made to the FCC and the response was pre-scans could be performed in the band with the high power spectral density and all final measurements should be performed on any emissions seen in each band.
3. Appropriate RF filters and attenuators were used during pre-scans and final measurements. Insertion losses were entered on the spectrum analyser as RF levels offsets.
4. Tests were performed as field strength measurements and any emissions in non-restricted bands converted to an E.I.R.P. value in dBm in accordance with KDB 789033 Section II.G.2 using a conversion factor of 95.2. The measured values incorporate the calibrated antenna factor and cable loss.
5. The final measured value, for the given emission in the field strength result tables, incorporates the calibrated antenna factor and cable loss.
6. Where the highest levels of emissions or noise floor occurred in a restricted band, the maximum peak field strength level was compared to peak (74 dBµV/m) or average (54 dBµV/m) limits (see note 7). Where the highest levels of emission or noise floor occurred in a non-restricted band, the maximum field strength measured was converted to E.I.R.P. and compared to the -27 dBm/MHz E.I.R.P. limit. The -27 dBm/MHz E.I.R.P. limit was converted to a field strength limit of 68.2 dBµV/m at a measurement distance of 3 metres.
7. In accordance with KDB 789033 Section II.G.1.c) if the peak measurement satisfies the average limit, it is not necessary to perform a separate average measurement.
8. All other emissions shown on the pre-scan plots were investigated and found to be ambient or >20 dB below the applicable limit or below the measurement system noise floor.
9. Final measurements above 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

Transmitter Out of Band Radiated Emissions (5.47-5.725 GHz band operation) (continued)**Test Summary:**

Test Engineers:	Andrew Edwards & Kiren Mistry	Test Dates:	08 February 2016, 09 February 2016, 10 February 2016, 22 February 2016 & 04 March 2016
Test Sample Serial Number:	01001716		

FCC Reference:	Part 15.407(b)(3),(7) & 15.209(a)
Test Method Used:	KDB 789033 II.G. & ANSI C63.10 Sections 6.3 and 6.6
Frequency Range:	1 GHz to 40 GHz

Environmental Conditions:

Temperature (°C):	22 to 24
Relative Humidity (%):	31 to 35

Transmitter Out of Band Radiated Emissions (5.47-5.725 GHz band operation) (continued)**Note(s):**

1. FCC Part 15.407(b)(3) states for transmitters operating in the band 5.47 to 5.725 GHz: all emissions outside of the band will not exceed -27 dBm/MHz. Part(b)(7) states the provisions of 15.205 apply e.g. restricted bands of operation.
2. Pre-scans were performed with the EUT transmitting on the middle channel in this band. An inquiry was made to the FCC and the response was pre-scans could be performed in the band with the highest power spectral density (802.11n / MCS4) and all final measurements should be performed on any emission seen for each band.
3. Appropriate RF filters and attenuators were used during pre-scans and final measurements. Insertion losses were entered on the spectrum analyser as RF levels offsets.
4. Tests were performed as field strength measurements and any emissions in non-restricted bands converted to an E.I.R.P. value in dBm in accordance with KDB 789033 Section II.G.2 using a conversion factor of 95.2. The measured values incorporate the calibrated antenna factor and cable loss.
5. The final measured value, for the given emission in the field strength result tables, incorporates the calibrated antenna factor and cable loss.
6. Where the highest levels of emissions or noise floor occurred in a restricted band, the maximum peak field strength level was compared to peak (74 dB μ V/m) or average (54 dB μ V/m) limits (see note 8). Where the highest levels of emission or noise floor occurred in a non-restricted band, the maximum field strength measured was converted to E.I.R.P. and compared to the -27 dBm/MHz E.I.R.P. limit. The -27 dBm/MHz E.I.R.P. limit was converted to a field strength limit of 68.2 dB μ V/m at a measurement distance of 3 metres.
7. The emission shown on the 4 GHz to 6 GHz plot is the EUT fundamental.
8. In accordance with KDB 789033 Section II.G.1.c) if the peak measurement is below the average limit, it is not necessary to perform a separate average measurement.
9. All other emissions shown on the pre-scan plot were investigated and found to be ambient or >20 dB below the applicable limit or below the measurement system noise floor.
10. Pre-scan plots 4 to 6 GHz and the two restricted band plots (4.5 to 5.15 and 5.35 to 5.46 GHz) were performed with 4001 Sweep points and 144 sweep points in accordance with KDB 789033 II.G.6.c)(iii). All other measurements were performed with the instruments default setting of 625 sweep points.
11. Measurements were performed across the two restricted bands closest to the bands of operation with the EUT transmitting on the top channel in the 5.25 to 5.35 GHz band. Plots are included in this section of the test report. Peak and average measurements were made.
12. Pre-scans above 1 GHz were performed in a fully anechoic chamber (Asset Number K0002) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. All measurement antennas were placed at a fixed height of 1.5 metres above the test chamber floor, in line with the EUT. Final measurements above 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

5.2.7. Transmitter Band Edge Radiated Emissions**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	06 February 2016
Test Sample Serial Number:	01001716		

FCC Reference:	Parts 15.407(b)(1),(7), 15.205 & 15.209(a)
Test Method Used:	ANSI C63.10 Section 6.10 & KDB 789033 II.G.

Environmental Conditions:

Temperature (°C):	23
Relative Humidity (%):	38

Note(s):

1. An Inquiry was made to the FCC and the response confirmed band edge measurements need only be performed in the EUT modes that produce the highest power and the widest bandwidths. The modes that produced the highest power and widest bandwidth were:
 - o 802.11a - BPSK / 9 Mbps & QPSK / 12 Mbps
 - o 802.11n HT20 – BPSK / MCS0 & 16QAM / MCS4
 - o 802.11n HT40 – BPSK / MCS0
2. Lower band edge measurements were performed with the EUT transmitting on the bottom channel. Upper band edge measurements were performed with the EUT transmitting on the top channel.
3. For transmitters operating in the 5.15-5.25 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz. However, there are restricted bands of operation below the lower band edge at 4.5-5.15 GHz and also above the upper band edge at 5.35-5.46 GHz therefore the provisions of FCC Part 15.205 apply.
4. Field strength measurements using peak and average detectors were performed in the restricted bands below 5.15 GHz and above 5.35 GHz. Field strength and EIRP results were found to be compliant with the restricted band limits and Part 15.407 out-of-band limits.
5. In accordance with KDB 789033 Section II.G.1.c) if the peak measurement is below the average limit, it is not necessary to perform a separate average measurement.
6. In accordance with KDB 789033 Section II.G.6.c) Method AD (vi), the average measurements were performed using an increased number of sweeps as calculated below:
 - o 802.11a / BPSK / 9 Mbps – 107 sweeps
 - o 802.11a / QPSK / 12 Mbps – 114 sweeps
 - o 802.11n HT20 / BPSK / MCS0 – 109 sweeps
 - o 802.11n HT20 / 16QAM / MCS4 – 144 sweeps
 - o 802.11n HT40 / BPSK / MCS0 – 117 sweeps
7. In accordance with KDB 789033 Section II.G.6.c) Method AD (vii), for average measurements, data rates where the EUT was transmitting <98% duty cycle, the duty cycle correction factor calculated in section 5.2.3 was added to the measured result.

Transmitter Band Edge Radiated Emissions (5.15-5.25 GHz band operation) (continued)**Results: 802.11a / 20 MHz / BPSK / 9 Mbps / Peak**

Frequency (MHz)	Level (dBμV/m)	Limit (dBμV/m)	Margin (dB)	Result
5150	61.5	74.0	12.5	Complied

Frequency (MHz)	Peak Level (dBμV/m)	Average Limit (dBμV/m)	Margin (dB)	Result
5350	51.3	54.0	2.7	Complied
5370.272	52.9	54.0	1.1	Complied

Results: 802.11a / 20 MHz / BPSK / 9 Mbps / Average

Transmitter Band Edge Radiated Emissions (5.25-5.35 GHz band)**Test Summary:**

Test Engineer:	Andrew Edwards	Test Date:	07 February 2016
Test Sample Serial Number:	01001716		

FCC Reference:	Parts 15.407(b)(2),(7), 15.205 & 15.209(a)
Test Method Used:	ANSI C63.10 Section 6.10 & KDB 789033 II.G.

Environmental Conditions:

Temperature (°C):	22
Relative Humidity (%):	37

Note(s):

- An Inquiry was made to the FCC and the response confirmed band edge measurements need only be performed in the EUT modes that produce the highest power and the widest bandwidths. The modes that produced the highest power and widest bandwidth were:
 - 802.11a - BPSK / 9 Mbps & QPSK / 12 Mbps
 - 802.11n HT20 – BPSK / MCS0 & 16QAM / MCS4
 - 802.11n HT40 – BPSK / MCS0
- Lower band edge measurements were performed with the EUT transmitting on the bottom channel. Upper band edge measurements were performed with the EUT transmitting on the top channel.
- For transmitters operating in the 5.25-5.35 GHz band: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz. However, there are restricted bands of operation below the lower band edge at 4.5-5.15 GHz and also above the upper band edge at 5.35-5.46 GHz therefore the provisions of FCC Part 15.205 apply.
- Field strength measurements using peak and average detectors were performed in the restricted bands below 5.15 GHz and above 5.35 GHz. Field strength and EIRP results were found to be compliant with the restricted band limits and Part 15.407 out-of-band limits.
- In accordance with KDB 789033 Section II.G.1.c) if the peak measurement is below the average limit, it is not necessary to perform a separate average measurement.
- In accordance with KDB 789033 Section II.G.6.c) Method AD (vi), the average measurements were performed using an increased number of sweeps as calculated below:
 - 802.11a / BPSK / 9 Mbps – 107 sweeps
 - 802.11a / QPSK / 12 Mbps – 114 sweeps
 - 802.11n HT20 / BPSK / MCS0 – 109 sweeps
 - 802.11n HT20 / 16QAM / MCS4 – 144 sweeps
 - 802.11n HT40 / BPSK / MCS0 – 117 sweeps
- In accordance with KDB 789033 Section II.G.6.c) Method AD (vii), for average measurements, data rates where the EUT was transmitting <98% duty cycle, the duty cycle correction factor calculated in section 5.2.3 was added to the measured result.

Transmitter Band Edge Radiated Emissions (5.47-5.725 GHz band)**Test Summary:**

Test Engineer:	Andrew Edwards	Test Dates:	07 February 2016, 08 February 2016 & 04 March 2016
Test Sample Serial Number:	01001716		

FCC Reference:	Parts 15.407(b)(3),(7), 15.205 & 15.209(a)
Test Method Used:	ANSI C63.10 Section 6.10.4 & KDB 789033 II.G.

Environmental Conditions:

Temperature (°C):	22 to 23
Relative Humidity (%):	31 to 36

Note(s):

1. An Inquiry was made to the FCC and the response confirmed band edge measurements need only be performed in the EUT modes that produce the highest power and the widest bandwidths. The modes that produced the highest power and widest bandwidth were:
 - o 802.11a - BPSK / 9 Mbps & QPSK / 12 Mbps
 - o 802.11n HT20 – BPSK / MCS0 & 16QAM / MCS4
 - o 802.11n HT40 – BPSK / MCS0
2. Lower band edge measurements were performed with the EUT transmitting on the bottom channel. Upper band edge measurements were performed with the EUT transmitting on the top channel.
3. For transmitters operating in the 5.47-5.725 GHz band: all emissions outside of the 5.47-5.725 GHz band shall not exceed an EIRP of -27 dBm/MHz. However, there are restricted bands of operation below the lower band edge at 4.5-5.15 GHz and also at 5.35-5.46 GHz therefore the provisions of FCC Part 15.205 apply. Tests were performed in these restricted bands of operation with the EUT transmitting on the bottom and top channels within 5.47-5.725 GHz band, the results are included in the transmitter 5.47-5.725 GHz band radiated spurious emissions section of this test report.
4. For completeness, results are also shown as EIRP in dBm and also as field strength in dBμV/m. Measured field strength was converted to EIRP in accordance with KDB 789033 II.G.2.d.(iii) using a conversion factor of 95.2.
5. *In accordance with FCC KDB 789033 Section II.G.3(d)(ii), the integration method was used to show compliance. The channel power function of a test receiver was used to perform the measurements in a 1 MHz bandwidth. The measurement was centred 500 kHz below the lower band edge (5469.5 MHz) and 500 kHz above the upper band edge (5725.5 MHz). Emissions that were found to be a higher level than the band edge emission were measured on the centre frequency of the measured emission. The test receiver was left to sweep for a sufficient period of time on Max Hold until the emission levels were maximised.

6. Measurement Uncertainty

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

The uncertainty of the result may need to be taken into account when interpreting the measurement results.

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document "approximately" is interpreted as meaning "effectively" or "for most practical purposes".

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
AC Conducted Spurious Emissions	0.15 MHz to 30 MHz	95%	±4.69 dB
Maximum Conducted Output Power	5.15 GHz to 5.850 GHz	95%	±1.13 dB
Maximum Power Spectral Density	5.15 GHz to 5.850 GHz	95%	±1.13 dB
26 dB Emission Bandwidth	5.15 GHz to 5.850 GHz	95%	±3.92 %
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±5.65 dB
Radiated Spurious Emissions	1 GHz to 40 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.
