### Product function and intended use

The equipment under test (EUT) is toy drone embedded with WiFi camera. It is powered by rechargeable battery.

The manufacturer declares that the models as listed below are all identical in electrical, PCB layout, components used except the packaging and model number only. Due to the manufacturer declaration of equivalence, the model X-PACK 1 was randomly selected as a representative for testing and construction photo taking.

FCC ID: 2AEVN0754XT1W

Technical Description  
User manual  
Label

## **Independent Operation Modes**

The basic operation modes are:

- Transmitting mode.

For further information refer to User Manual

## **Related Submittal(s) Grants**

This is a single application for certification of the transmitter.

## **Remark**

The test results in this test report are only relevant to the tested sample and does not involve any assessment in the production.

## Test Set-up and Operation Mode

### Principle of Configuration Selection

**Emission:** The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes were adapted accordingly in reference to the instructions for use.

### Test Operation and Test Software

Test operation should refer to test methodology.

- During test, Channel & Power Controlling Software provided by the customer was used to control the operating channel as well as the output power level. The RF output power was selected according to the instruction given by the manufacturer. The setting of the RF output power expected by the customer shall be fixed on the firmware of the final end product.

### Special Accessories and Auxiliary Equipment

- None

### Countermeasures to achieve EMC Compliance

- None

## Test Methodology

### Radiated Emission

The radiated emission measurements of the transmitter part were performed according to the procedures in ANSI C63.10-2013.

For measurement below 1GHz - the equipment under test (EUT) was placed at the middle of the 80 cm height turntable. For measurement above 1GHz - the EUT was placed at the middle of the 1.5 m height turntable and RF absorbing material was placed on ground plane between turntable and measuring antenna. During the testing, the EUT was operated standalone and arranged for maximum emissions. The EUT was tested in three orthogonal planes.

The investigation is performed with the EUT rotated 360°, the antenna height scanned between 1m and 4m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations. Repeat the measurement steps until the maximum emissions were obtained.

All radiated tests were performed at an antenna to EUT with 3 meters distance, unless stated otherwise in particular parts of this test report.

### Field Strength Calculation

The field strength at 3 m was established by adding the meter reading of the spectrum analyzer to the factors associated with antenna correction factor, cable loss, preamplifiers and filter attenuation.

The equation is expressed as follow:

$$FS = R + AF + CF + FA - PA$$

Where FS = Field Strength in dBuV/m at 3 meters.  
R = Reading of Spectrum Analyzer in dBuV.  
AF = Antenna Factor in dB.  
CF = Cable Attenuation Factor in dB.  
FA = Filter Attenuation Factor in dB.  
PA = Preamplifier Factor in dB.

FA and PA are only be used for the measuring frequency above 1 GHz.

## Test Setup Diagram

Diagram of Measurement Configuration for Radiation Test

Note: Measurements above 1 GHz are done with a table height of 1.5m. In addition, there is RF absorbing material on the floor of the test site for above 1GHz measurement.

| Spectrum Analyzer | R & S        | FSP30 | 3-May-18  | 2-May-19 |

## Measurement Uncertainty

The estimated combined standard uncertainty for power-line conducted emissions measurements is  $\pm 2.42\text{dB}$ .

The estimated combined standard uncertainty for radiated emissions measurements is  $\pm 4.81\text{dB}$  (9kHz to 30MHz) and  $\pm 4.62\text{dB}$  (30MHz to 200MHz) and  $\pm 5.67\text{dB}$  (200MHz to 1000MHz) and is  $\pm 5.07\text{dB}$  (1GHz to 8.2GHz) and  $\pm 4.58\text{dB}$  (8.2GHz to 12.4GHz) and  $\pm 4.78\text{dB}$  (12.4GHz to 18GHz)

The reported expanded uncertainty of measurement is stated as the standard uncertainty of measurement multiplied by the coverage factor of  $k=2$ , which for the level of confidence is approximately 95%.

**Remark:** Nil

**FCC 15.205/ RSS-Gen 8.9 – Radiated Emissions in Restricted Frequency Bands** **Pass**

Test Specification : ANSI C63.10 – 2013  
 Test Date : 12.11.2018  
 Tested Model : AC00013  
 Mode of operation : Tx mode  
 Port of testing : Enclosure  
 Frequency range : 9kHz – 25GHz  
 Supply voltage : 120VAC 60Hz  
 Temperature : 23°C  
 Humidity : 50%

**FCC/ IC Requirement:** In any 100kHz bandwidth outside the frequency band at least 20dB below the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands must also comply with the radiated emission general limits.

**Results:** No peak is found below 1GHz.

Mode: 802.11n@2412MHz Vertical Polarization

| Freq MHz | Level dBuV/m | Limit/ Detector dBuV/m |
|----------|--------------|------------------------|
| 2390.000 | 69.6         | 74.0 / PK              |
| 2390.000 | 51.9         | 54.0 / AV              |
| 2483.500 | 40.4         | 74.0 / PK              |
| 2483.500 | 26.5         | 54.0 / AV              |
| 4824.647 | 46.7         | 74.0 / PK              |
| 4824.647 | 32.8         | 54.0 / AV              |

Mode: 802.11n@2412MHz Horizontal Polarization

| Freq MHz | Level dBuV/m | Limit/ Detector dBuV/m |
|----------|--------------|------------------------|
| 2390.000 | 68.7         | 74.0 / PK              |
| 2390.000 | 50.9         | 54.0 / AV              |
| 2483.500 | 40.0         | 74.0 / PK              |
| 2483.500 | 26.1         | 54.0 / AV              |
| 4825.314 | 47.7         | 74.0 / PK              |
| 4825.314 | 33.9         | 54.0 / AV              |

**Remark:** 1) Pre-scan has been conducted to determine the worst-case mode from all possible combinations between available modulations and data rate.
