Mesh WI-FI User Manual

Contents

Chapter 1 : Brief Introduction

1. System Map -----	3-6
2. Battery control Software -----	7
3. Components Section -----	8

Chapter 2 : Operational Mode

1. CD Station -----	10-16
2. AB Station -----	17-24
3. LRMS Set Up -----	25-29
4. Final Test -----	30-31

Chapter 3 : Mesh WiFi Device Wiring explanation

1. A Station -----	32
2. B Station -----	32
3. CD Station -----	33
4. A/B/CD Station -----	33

Chapter 4 : Product Specification

1. Wireless radio specifications -----	34-35
--	-------

Chapter 5 : Certified

1. CE Report -----	36-43
2. UL Report for Battery -----	44-45

Chapter 1 : Brief Introduction

1. System Map :

Opportunity Driven Multiple Access (MESH-WIFI)

1. An intelligent wireless subscriber relay communication technology
2. Finds multiple access opportunities and adapts the best opportunity to communicate faster, further with less power

MESH-WIFI Network- PARROT

1. Programmable
2. Adaptive
3. Repeater/ Relay/ Router
4. Revert Back
5. Onward/ Opportunity
6. Transmission

Intelligent Wireless Subscriber Relay

1. Use any MESH-WIFI subscriber or device to relay data, no base station needed

Dynamically select the nearest neighbor to relay

Multi-hopping constructs the wireless backhaul

Fast deployment & cost effective

Subscribers are part of the infrastructure More users More system capacity

The best “last mile” solution

2. Adaptive power, route, channel, taking the best burst opportunity to transmit data

Adaptive Output Power

Adaptive Routing

Intelligent Channel Hopping

Burst Opportunity

Finds multiple access opportunities to avoid failure of a single access point

Adaptive Routing

Burst Opportunity

1. Wireless connection condition changes over time. MESH-WIFI chooses the best quality period to transmit burst data
2. The more routes, the more best burst opportunities
3. Taking only the best burst opportunity instead of continuous link Lower interference to others

High Mobility

1. Mobile node bursts and receives data from many different neighbors in different locations thousand times per second while speeding
2. MESH-WIFI can communicate at speeds up to 300 km/hr

High Security

1. No fixed path from source to destination
2. Packets are forwarded with very low power consumption
3. Neighbor watching mechanism

Frequency Independent

1. MESH-WIFI operates independently of any frequency bands, transmission or coding modulation
2. MESH-WIFI can enhance any existing wireless communication technology
MESH-WIFI-enhanced WiFi, WiMAX, 3G, GSM, PHS, WCDMA, etc.

2. Battery control Software :

YANG HWA TECHNOLOGY CORP.

IP Address : 192.168.55.30

TCP/IP Port : 8001

Loop : Interval Time

UV : Under Voltage

OC : Over Current

OV : Over Voltage

BC : Battery Charging

AC : AC power ready

3. Components Section :

Cable&Power Input

Schematic Diagram

RISK OF EXPLOSION IF BATTERY IS REPLACED BY AN INCORRECT TYPE.

DISPOSE OF USED BATTERIES ACCORDING TO THE INSTRUCTION.

Chapter 2 : Operational Mode

Mesh WiFi Network architecture and planning

Gateway:192.168.1.1

DHCP Server: 192.168.1.1

LRMS:192.168.1.10

CD Stations:192.168.1.11 、 192.168.1.12

Overall architecture:

4. WAN Setting

Wan setting (Follow the Figure 1. Mesh WiFi network structure.)

The screenshot shows a web browser window displaying the WistSoft WAN Setting page. The page has a header with the WistSoft logo and the text "SoMAX Enabled™ Wireless Subscriber Relay Networks". Below the header, there are navigation links: "Intelligent", "Wireless", "Integrated", "Communications", and "Systems". The main content area is titled "WAN Setting" and contains a "Back" link on the left. The central part of the page has a form for configuring network settings. The form includes radio buttons for "Static IP" (selected), "DHCP Client", and "Dynamic PPPoE". Below these, there are input fields for "Address" (192.168.1.11), "Subnet mask" (255.255.255.0), "Default gateway address" (192.168.1.1), "Primary DNS" (192.168.1.1), and "Secondary DNS". A "Submit" button is located at the bottom of the form. The footer of the page states "© 2013 WistSoft, Inc. All Rights Reserved".

Chapter 4 : Product Specification

Mesh WiFi AP-5620 SPEC

1. Wireless radio specifications :

- Dual radio, 5 GHz and 2.4 GHz 802.11n
- Software-configurable dual radio supports 5 GHz Mesh wifi and 2.4 GHz normal Wi-Fi
- Maximum (aggregate, conducted total) transmit power (limited by local regulatory requirements):
 - ✧ 2.4 GHz band: +20 dBm
 - ✧ 5 GHz band: +20 dBm
- Supported data rates (Mbps):
 - ✧ 802.11b: 1, 2, 5.5, 11
 - ✧ 802.11a/g: 6, 9, 12, 18, 24, 36, 48, 54
 - ✧ 802.11n: 6.5 to 300 (MCS0 to MCS23)

Antenna

- External dBi antenna x 3 (3 dBi gain for 5 GHz and 2.4 GHz)

Power

- AC Input : 100V-240V(50~60Hz)
- 36W LiFePO4 battery pack.
- Used Max. 12W , normal 5W.

Network interfaces

- 1 x 10/100/1000BASE-T Ethernet network interfaces (RJ-45)
 - ✧ Auto-sensing link speed

Mechanical

- Housing Dimensions (mm)

Regulatory

- o FCC/CE

FCC Notices

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION: Change or modification not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

CAUTION:

Any changes or modifications not expressly approved by the grantee of this device could void the user's authority to operate the equipment.

RF exposure warning

This equipment must be installed and operated in accordance with provided instructions and the antenna(s) used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter. End-users and installers must be provide with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance."
