Test Data Attestation

Date: 8-5-2020

This is an attestation regarding the test data for the Part 30 test report p19c0009.

The test data contained in the FCC Part 30 test report, p19c0009, was recorded as part of the Part 30 accreditation process with ANAB.

The required testing was performed per the KDB 586862 guidance and the mm-wave radiated emissions testing was witnessed and approved by the ANAB accessor.

After the witness testing and review of the supporting documentation, ANAB provided a signed scope expansion document showing that the accessor has verified that Compliance Testing staff was competent to perform Part 30 mm-wave testing.

The dates of the individual tests in the test report will predate the date the scope expansion for part 30 due to the requirement of needing a final test report as part of the accreditation process in order for the ANAB accessor to access the competency of the Compliance Testing staff to perform mm-wave measurements.

The date on the cover page shows the date the test report was released for final certification and is after the date the accessor signed the part 30 scope expansion.

The cover page will show the date the test report was released for FCC certification.

Compliance Testing will update the filing with the FCC as soon as ANAB provides the final scope of accreditation.
