David Schramm, EMC/RF/SAR/HAC Manager**Remarks:**

This report details the results of the testing carried out on one sample, the results contained in this test report do not relate to other samples of the same product. The manufacturer should ensure that all products in series production are in conformity with the product sample detailed in this report.

This report may only be reproduced and distributed in full. If the product in this report is used in any configuration other than that detailed in the report, the manufacturer must ensure the new system complies with all relevant standards. Any mention of SGS International Electrical Approvals or Testing done by SGS International Electrical Approvals in connection with distribution or use of the product described in this report must be approved by SGS international Electrical Approvals in writing.

1 Summary of Test Results

Basic Standards	Test Result
Emissions Testing	
FCC Part 15, Subpart C, 15.209 / RSS-Gen S7.2.5 - Radiated Emissions	Compliant
FCC Part 15, Subpart C, 15.207 / RSS-Gen S7.2.4 - Conducted Emissions	Compliant
AS/NZS 4268:2012	Compliant

1.1 Modifications Required to Compliance

None

2 General Information

2.1 Client Information

Name: UVLrx Therapeutics Inc.
Address: 640 Brooker Creek Blvd, Suite 455
City, State, Zip, Country: Oldsmar, FL 34677 United States

2.2 Test Laboratory

Name: SGS North America, Inc.
Address: 620 Old Peachtree Road NW, Suite 100
City, State, Zip, Country: Suwanee, GA 30024, USA

2.3 General Information of EUT

Model Name: UVLrx Station
Model Number: UVL1500
Serial Number: 2015-1500-005
FCC ID: 2AFFF-UVL1500
IC ID: 20424-UVL1500

Rated Voltage: 100-240Vac, 50/60Hz
Test Voltage: 120Vac, 60Hz

Sample Received Date: 23 March 2015
Date of testing: 23 March– 06 May 2015

2.4 Operating Modes and Conditions

A sample with modified firmware was provided by UVLrx to facilitate testing. Once powered, the RFID began transmitting full power at 13.56MHz.

While the UVL1500 has different mounting options, the device is intended for use in a single orientation and was tested as such. All accessories and interfacing connections are plastic/fiber optic with no facility for metallic connections. Therefore, these pieces were not included in the evaluation as they have no bearing on the electromagnetic performance of the RFID. The interfacing devices were evaluated under IEC 60601-1-2 and were not under the scope of certification.

2.5 EUT Connection Block Diagram

2.6 System Configurations

Device reference	Manufacturer	Description	Model Number	Serial Number
A	UVLrx Therapeutics Inc.	UVLrx Station	UVL1500	2015-1500-005

2.7 Cable List

Cable reference	Port Name	Start	End	Cable Length (m)	Ferrite installed?	Shielded?
1	AC Input	EUT	AC Mains	2.4	No	No

3 Radiated Emissions

3.1 Test Result

Test Description	Basic Standards	Test Result
Radiated Emissions	FCC Part 15, Subpart C, 15.209 RSS-Gen S7.2.5 ANSI C63.4:2009	Compliant

3.2 Test Method

Exploratory scans were performed over the frequency range as indicated in the tables below using the max hold function and incorporating a Peak detector and using TILE! software. The final test data was measured using a Quasi-Peak detector below 1GHz and a Peak and Average detector above 1GHz. The receivers resolution bandwidth was set to 120 kHz for measurements taken in the 30MHz to 1GHz frequency range and 1MHz for measurements for 1GHz and higher. Measurements were made with the antenna positioned in both the horizontal and vertical planes of polarization. The antenna height was varied from 1 m to 4 m and the EUT was rotated 360° to find the maximum emitting point for each frequency. The radiated measurements were recorded and compared to the limits indicated in the table below.

Radiated emissions limits

Frequency Range (MHz)	Limits (uV/m) Quasi-Peak or Average	Measurement Distance (m)
0.009-0.490	2400/F(kHz)	300
0.490-1.705	24000/F(kHz)	30
1.705-30.0	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

Note: For measurements below 30MHz at closer distance, the limits were adjusted using the square of an inverse linear distance extrapolation factor (40 dB/decade).

3.3 Test Site

10m Absorber Lined Shielded Enclosure (ALSE), Suwanee, GA

Environmental Conditions

Temperature: 22.2 °C
Relative Humidity: 51.0 %
Atmospheric Pressure: 97.9 kPa

3.4 Test Equipment

Test Dates: 27-May-2015

Tester: JOP

456.05	20.3	H	204.0	150.0	17.3	1.7	0.0	39.4	46.0	-6.6
781.56	20.0	H	272.0	378.0	21.7	2.3	0.0	44.0	46.0	-2.0
846.58	18.9	H	189.0	186.0	22.6	2.4	0.0	43.9	46.0	-2.1
QP Value = Level + AF + CL - Amp										
Margin = QP Value - Limit										

Note: None of these measurements were harmonics of the 13.56MHz fundamental

4 Conducted Emissions

4.1 Test Result

Test Description	Basic Standards	Test Result
Conducted Emissions	FCC Part 15, Subpart C, 15.207 RSS-Gen S7.2.4 ANSI C63.4:2009	Compliant

4.2 Test Method

With the receivers resolution bandwidth was set to 9 kHz the initial preliminary exploratory scans were performed over the measuring frequency range (0.15MHz to 30MHz) using a max hold mode incorporating a Peak detector and Average detector and using the TILE! software. The final test data was measured using a Quasi-Peak detector and Average detector and compared against the limits indicated in the table below.

Frequency Range	Class B Limits (dBuV)
0.15 to 0.5 MHz	Avg 56 to 46 QP 66 to 56
0.5 to 5 MHz	Avg 46 Pk 56
5 to 30 MHz	Avg 50 Pk 60

4.3 Test Site

5.5 Test Data

Date: 26.MAY.2015 07:17:51

Occupied Bandwidth = 24.8kHz

6 Frequency Stability

6.1 Test Result

Test Description	Basic Standards	Test Result
Frequency Stability	AS/NZS 4268	Compliant

6.2 Test Method

The signal frequency was measured at both normal and extreme temperature conditions with the device placed in an environmental chamber. At each temperature required, the EUT was immersed in a calibrated temperature controlled chamber. The EUT was allowed a minimum of 30 minutes to thermally stabilize at each temperature. The EUT was then powered on, and the charging frequency was measured and compared against the nominal temperature measurement. Measurements were repeated at extreme input voltages (nominal +/-10%).

7 Revision History

Revision Level	Description of changes	Revision Date
0	Initial release	27 May 2015
1	- Added FCC and IC IDs to Page 5 - Inserted conducted emissions section with results	17 September 2015
2	- Updated cover page to reflect 2103 version of ANSI C63.10 - Added additional information regarding EUT positioning and accessories to Section 2.4 on page 4. - Added explanation of test distance affect on limit to page 6. - Added measurement distance to radiated test results on pages 8, 9, and 10.	07 October 2015
