Exhibit 10 – Tune Up Procedure

1 2.1033(c)(9) Tune-Up Procedure

All the necessary adjustments will be set in the factory, and no adjustments are needed. The maximum output power level is remotely controlled by the Base Station Controller (BSC). If the TRX or PAU is not able to maintain the requirements for power output, frequency stability etc, an alarm is sent to the BSC. On severe faults the TRX will disable transmission.
