

Test Report No. 9512312315

Applicant: Green Point Systems Ltd.

Equipment Under Test: RF transceiver

Model: IGHF

FCC ID: 2AFMJ-IGHF

***From The Standards Institution
Of Israel***

Industry Division

Electronics & Telematics Laboratory

EMC Branch

Certificate Number: AT-1359

Test Report No.: 9512312315

Page 2 of 16 pages

Title: RF transceiver

Model: IGHF

FCC ID: 2AFMJ-IGHF

Applicant:	Green Point Systems Ltd.
Address:	7 Haeshel St., South Industrial Park, P.O.Box 3136, Caesarea, 3088900, Israel
Sample for test selected by:	The customer
The date of tests:	11, 17 May 2015

Description of Equipment Under Test (EUT):	RF transceiver.
Model:	IGHF
Software version of radio unit	B1
Manufactured by:	Green Point Systems Ltd.

Reference Documents:

- ❖ CFR 47 FCC: Rules and Regulations;
Part 15. "Radio frequency devices";
Subpart B: "Unintentional radiators" (2010)

This Test Report contains 16 pages and may be used only in full.	This Test Report applies only to the specimen tested and may not be applied to other specimens of the same product.

1. Test summary

Parameter	FCC Part 15 Subpart B Reference paragraph	Verdict
Conducted emission on AC line Frequency range: 0.15 - 30 MHz	Section 15.107 Class B	Comply
Radiated emission from unintentional radiator Frequency range: 30 MHz – 6GHz	Section 15.109 Class B	Comply

Electronics & Telematics
Laboratory
September 29, 2015

Name: Eng. Yuri Rozenberg
Position: Head of EMC Branch

Name: Michael Feldman
Position: Test Technician

Measurement uncertainty.

The test equipment has been calibrated according to its recommended procedures and is within the manufacturer's published limit of error.

The laboratory calibrates its standards by a third party (traceable to NIST, USA) on a regular basis according to equipment manufacturer requirements.

In the following table the uncertainty calculation is given.

Type of disturbance Test description	Calculated uncertainty U_{LAB}
Radiated disturbance electric field strength in a SAR at 3 m distance 30 MHz – 1.0 GHz	± 4.32 dB
electric field strength in a FAR at 3 m distance 1.0 – 18 GHz. 18 – 40 GHz.	± 4.47 dB ± 2.78 dB
Conducted disturbance at mains port (150 kHz to 30 MHz)	2.8 dB

Normative References.

Title: RF transceiver

Model: IGHF

FCC ID: 2AFMJ-IGHF

2. EUT Description and operation

2.1. General description:

* Note: the customer supplied all information in clause below.

RF transceiver IGHF is integrated in IGHH smart switch that is a part of smart home system. The IGHF enables smart control over lights shutters, air conditioning and power appliances and can be operated locally or from Internet via the Internet Gateway. Switch is built with touch technology and no mechanical parts. The switch is designed with subtle LED lights which display the current switch mode.

Type of modulation:	FSK
Antenna type:	Integrated

Photo 1. Smart switch side and rear view.

2.2. Potential emission sources:

Table 1. Potential emission sources

Frequency	Location
30.0 MHz	RF Lo oscillator
433.04 – 434.4 MHz	RF signal

2.3. EUT setup and operation:

Settings: RF communication disabled.

**Test Report No.: 9512312315****Page 6 of 16 pages****Title:** RF transceiver**Model:** IGHF**FCC ID:** 2AFMJ-IGHF

3. Measurements and derived results

3.1. Location of the Test Site:

The tests were conducted at the EMC laboratory of the Standards Institution of Israel in Tel-Aviv.

3.2. Test condition:

Temperature: 24 °C. Humidity: 53 %. Atmospheric pressure: 1008 mbar.

3.3. Radiated emission test.

3.3.1. General:

The test performed per FCC Part 15 Subpart B Section 15.109 Class B.

The initial scan was made using a peak detector but still using the appropriate CISPR 16 (Quasi-Peak) detector IF bandwidth.

A tolerance limit was set 10 dB below the specification limit. Levels above the tolerance limit were retested using the Quasi-Peak detector.

3.3.2. Radiated emission test procedure:

Preliminary investigation was performed from the lowest radio frequency signal generated in the equipment up to ten harmonic of a carrier frequency.

The final radiated emission measurements were performed in the semi Anechoic chamber at the 3 m test distances.

Settings: RF communication disabled.

The transmitter was installed on a turn - table.

Biconilog and Double Ridged Guide antennas were used.

The frequency range from 30 MHz to 6 GHz was investigated.

The measurements were performed at frequencies at which the signal level was 10 dB below the limit or less. The levels were maximized by rotating turntable through 360° and changing antenna-to-EUT polarization from vertical to horizontal.

Unless stated otherwise, the measuring equipment settings were:

Initial scan:

Detector type	Peak
Mode	Max hold
Bandwidth	120 kHz
Step size	Continuous sweep
Sweep time	>1 seconds/MHz

Measurements

Detector type	Quasi-peak (CISPR)/Avg
Bandwidth	120 kHz/ 1MHz
Measurement time	20 seconds/MHz
Observation	>15 seconds

**Test Report No.: 9512312315****Page 7 of 16 pages****Title:** RF transceiver**Model:** IGHF**FCC ID:** 2AFMJ-IGHF**3.3.3. Radiated emission test results:**

The test results are presented in **table 2** (30-1000 MHz range) and in **plots ## 1 – 2** (1-6GHz range).

30-1000 MHz range: All QP and Avg emissions are 12dB at least below limit Class B.

1 – 6GHz range: All peaks/ Avg are below Peak/ Avg limit Class B.

**Table 2. Unintentional radiated emissions test result.
Frequency range 30-1000MHz**

Freq. MHz	Antenna Polariz. V/H	Antenna Height (m)	Turn table Angle (°)	QP. Emission Level (dB μ V/m)	Limit Class B @ 3 m (dB μ V/m)	Margin (dB)
36.5	V	1.0	204	27.7	40.0	12.3
194.4	H	1.5	271	27.7	43.5	15.8
227.1	H	1.5	238	31.3	46.0	14.7

3.4. Conducted emission test on AC mains line.

3.4.1. General:

The test performed per FCC Part 15 Subpart B Section 15.107 Class B.

The initial scan was made using a peak detector but still using the appropriate CISPR 16 (Quasi-Peak) detector IF bandwidth.

A tolerance limit was set 6 dB below the specification limit. Levels above the tolerance limit were retested using the Quasi-Peak detector or an Average detector..

3.4.2. Conducted emission test procedure:

The test was started with an initial scan. The final measurements were performed at each frequency where the signal was 10 dB below the limit or less.

Test equipment (EMI receiver) setup was as follow:

Initial scan:

Detector type	Peak
Mode	Max hold
Bandwidth	9 kHz
Step size	Continuous sweep
Sweep time	>100 msec

Measurements

Detector type	Quasi-peak (CISPR)
Bandwidth	9 kHz
Observation	>15 seconds

3.4.3. Conducted emission test results:

The test results are presented in **plots ## 3-4.**

All QP and Avg emissions are 6.2dB at least below limit Class B.
