# TEST REPORT

**Application No.:** SEWM2209000168RG  
**Applicant:** Xiaomi Communications Co., Ltd.  
**Address of Applicant:** #019, 9th Floor, Building 6, 33 Xi'erqi Middle Road, Haidian District, Beijing, China, 100085  
**Manufacturer:** Xiaomi Communications Co., Ltd.  
**Address of Manufacturer:** #019, 9th Floor, Building 6, 33 Xi'erqi Middle Road, Haidian District, Beijing, China, 100085  
**EUT Description:** Mobile Phone  
**Model No.:** 22101320G  
**Trade Mark:** POCO  
**FCC ID:** 2AFZZ1320G  
**Standards:** FCC 47 CFR Part 2, Subpart J  
FCC 47 CFR Part 15, Subpart E  
**Date of Receipt:** 2022/09/29  
**Date of Test:** 2022/10/01 to 2022/10/25  
**Date of Issue:** 2022/10/26

|                      |               |
|----------------------|---------------|
| <b>Test Result :</b> | <b>PASS *</b> |
|----------------------|---------------|

\* In the configuration tested, the EUT detailed in this report complied with the standards specified above.

### 3 General Information

#### 3.1 Details of Client

|                          |                                                                                               |
|--------------------------|-----------------------------------------------------------------------------------------------|
| Applicant:               | Xiaomi Communications Co., Ltd.                                                               |
| Address of Applicant:    | #019, 9th Floor, Building 6, 33 Xi'erqi Middle Road, Haidian District, Beijing, China, 100085 |
| Manufacturer:            | Xiaomi Communications Co., Ltd.                                                               |
| Address of Manufacturer: | #019, 9th Floor, Building 6, 33 Xi'erqi Middle Road, Haidian District, Beijing, China, 100085 |

#### 3.2 Test Location

|                |                                                                                                                        |
|----------------|------------------------------------------------------------------------------------------------------------------------|
| Company:       | SGS-CSTC Standards Technical Services (Suzhou) Co., Ltd.                                                               |
| Address:       | South of No. 6 Plant, No. 1, Runsheng Road, Suzhou Industrial Park, Suzhou Area, China (Jiangsu) Pilot Free Trade Zone |
| Post code:     | 215000                                                                                                                 |
| Test engineer: | Lves Cheng, King-p Li                                                                                                  |

#### 3.3 Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

• **A2LA (Certificate No. 6336.01)**

SGS-CSTC STANDARDS TECHNICAL SERVICES (SUZHOU) CO., LTD. is accredited by the American Association for Laboratory Accreditation(A2LA). Certificate No. 6336.01.

• **Innovation, Science and Economic Development Canada**

SGS-CSTC STANDARDS TECHNICAL SERVICES (SUZHOU) CO., LTD. has been recognized by ISED as an accredited testing laboratory.

CAB identifier: CN0120.

IC#: 27594.

• **FCC –Designation Number: CN1312**

SGS-CSTC STANDARDS TECHNICAL SERVICES (SUZHOU) CO., LTD. has been recognized as an accredited testing laboratory.

Designation Number: CN1312.

Test Firm Registration Number: 717327

| 1 MHz or less                                                                                                                                                                                                                           | 1                                             | centre                                                    |
| 1 MHz to 10 MHz                                                                                                                                                                                                                         | 2                                             | 1 near high end, 1 near low end                           |
| Greater than 10 MHz                                                                                                                                                                                                                     | 3                                             | 1 near high end, 1 near centre                            |

| For UNII Band I:           |                     |                |
|----------------------------|---------------------|----------------|
| Mode                       | Channel             | Frequency(MHz) |
| IEEE 802.11a/n/ac/ax 20MHz | The Lowest channel  | 5180           |
|                            | The Middle channel  | 5200           |
|                            | The Highest channel | 5240           |
| IEEE 802.11n/ac/ax 40MHz   | The Lowest channel  | 5190           |
|                            | The Highest channel | 5230           |
| IEEE 802.11ac/ax 80MHz     | The Middle channel  | 5210           |

| For UNII Band II-A:        |                     |                |
|----------------------------|---------------------|----------------|
| Mode                       | Channel             | Frequency(MHz) |
| IEEE 802.11a/n/ac/ax 20MHz | The Lowest channel  | 5260           |
|                            | The Middle channel  | 5280           |
|                            | The Highest channel | 5320           |
| IEEE 802.11n/ac/ax 40MHz   | The Lowest channel  | 5270           |
|                            | The Highest channel | 5310           |
| IEEE 802.11ac/ax 80MHz     | The Middle channel  | 5290           |
| IEEE 802.11ax 160MHz       | The Middle channel  | 5250           |

| For UNII Band II-C:        |                     |                |
|----------------------------|---------------------|----------------|
| Mode                       | Channel             | Frequency(MHz) |
| IEEE 802.11a/n/ac/ax 20MHz | The Lowest channel  | 5500           |
|                            | The Middle channel  | 5580           |
|                            | The Highest channel | 5700           |
| IEEE 802.11n/ac/ax 40MHz   | The Lowest channel  | 5510           |
|                            | The Middle channel  | 5550           |
|                            | The Highest channel | 5670           |
| IEEE 802.11ac/ax 80MHz     | The Lowest channel  | 5530           |
|                            | The Highest channel | 5610           |
| IEEE 802.11ax 160MHz       | The Middle channel  | 5570           |

| For UNII Band III:         |                     |                |
|----------------------------|---------------------|----------------|
| Mode                       | Channel             | Frequency(MHz) |
| IEEE 802.11a/n/ac/ax 20MHz | The Lowest channel  | 5745           |
|                            | The Middle channel  | 5785           |
|                            | The Highest channel | 5825           |
| IEEE 802.11n/ac/ax 40MHz   | The Lowest channel  | 5755           |
|                            | The Highest channel | 5795           |
| IEEE 802.11ac/ax 80MHz     | The Middle channel  | 5775           |

| Frequency Band   | Channel          | Freq.(MHz) | Channel | Freq.(MHz) |
|------------------|------------------|------------|---------|------------|
| Straddle Channel | 138 <sup>#</sup> | 5690       | 144     | 5720       |
|                  | 142 <sup>*</sup> | 5710       |         |            |

Note:

1. The above Frequency and Channel in “\*” were 802.11n HT40, 802.11ac VHT40 and ax(HE40).
2. The above Frequency and Channel in “#” were 802.11ac VHT80 and ax(HE80).

### 3.6 Description of Support Units

The EUT has been tested as an independent unit.

### 3.7 Worst-case configuration and mode

Low data rate was used to test on antenna port conducted tests and radiated spurious emissions since it has the highest maximum power. Following are the worst-case data rates set for test:

| Modulation Type    | SISO - Data Rate | CDD/MIMO - Data Rate |
|--------------------|------------------|----------------------|
| 802.11a            | 6 Mbps           | 12 Mbps              |
| 802.11n (HT 20)    | MCS0 (6.5 Mbps)  | MCS0 (13 Mbps)       |
| 802.11n (HT 40)    | MCS0 (13.5 Mbps) | MCS0 (27 Mbps)       |
| 802.11ac (VHT 20)  | MCS0 (6.5 Mbps)  | MCS0 (13 Mbps)       |
| 802.11ac (VHT 40)  | MCS0 (13.5 Mbps) | MCS0 (27 Mbps)       |
| 802.11ac (VHT 80)  | MCS0 (29.3 Mbps) | MCS0 (58.5 Mbps)     |
| 802.11ac (VHT 160) | MCS0 (58.5 Mbps) | MCS0 (117 Mbps)      |
| 802.11ax (HE 20)   | MCS0 (8 Mbps)    | MCS0 (16 Mbps)       |
| 802.11ax (HE 40)   | MCS0 (16 Mbps)   | MCS0 (32 Mbps)       |
| 802.11ax (HE 80)   | MCS0 (34 Mbps)   | MCS0 (68 Mbps)       |
| 802.11ax (HE 160)  | MCS0 (68 Mbps)   | MCS0 (136 Mbps)      |

## Cyclic Delay Diversity (CDD) System:

FCC KDB 662911 D01 Multiple Transmitter Output v02r01

If all antennas have the same gain,  $G_{ANT}$ , Directional gain =  $G_{ANT}$  + Array Gain, where Array Gain is as follows.

- For power spectral density (PSD) measurements on all devices,  
 $Array\ Gain = 10 \log(N_{ANT}/N_{SS}=1) \text{ dB}$ .
- For power measurements on IEEE 802.11 devices:  
 $Array\ Gain = 0 \text{ dB}$  (i.e., no array gain) for  $N_{ANT} \leq 4$ ;  
 $Array\ Gain = 0 \text{ dB}$  (i.e., no array gain) for channel widths  $\geq 40 \text{ MHz}$  for any  $N_{ANT}$ ;  
 $Array\ Gain = 5 \log(N_{ANT}/N_{SS}=1) \text{ dB}$  or  $3 \text{ dB}$ , whichever is less, for 20-MHz channel widths with  $N_{ANT} \geq 5$ .

Unequal antenna gains, with equal transmit powers. For antenna gains given by  $G_1, G_2, \dots, G_N \text{ dBi}$

- If transmit signals are correlated, then  
 $Directional\ gain = 10 \log[(10^{G_1/20} + 10^{G_2/20} + \dots + 10^{G_N/20})^2 / N_{ANT}] \text{ dBi}$  [Note the "20"s in the denominator of each exponent and the square of the sum of terms; the object is to combine the signal levels coherently.]
- If all transmit signals are completely uncorrelated, then  
 $Directional\ gain = 10 \log[(10^{G_1/10} + 10^{G_2/10} + \dots + 10^{G_N/10}) / N_{ANT}] \text{ dBi}$

The Power and PSD limit should be modified if the directional gain of eut is over 6dbi.

The EUT supports CDD System.

Unequal antenna gain:

| Transmit signals are completely uncorrelated |                 |                 |                                  |                                |                             |                           |
|----------------------------------------------|-----------------|-----------------|----------------------------------|--------------------------------|-----------------------------|---------------------------|
| Operation Frequency                          | ANT Gain1 (dBi) | ANT Gain2 (dBi) | Directional gain For Power (dBi) | Directional gain For PSD (dBi) | Power Limit Reduction (dBm) | PSD Limit Reduction (dBm) |
| 5150MHz to 5250MHz                           | 2               | -0.62           | 0.88                             | 3.80                           | 0                           | 0                         |
| 5250MHz to 5350MHz                           | 0.5             | -0.05           | 0.23                             | 3.24                           | 0                           | 0                         |
| 5470MHz to 5725MHz                           | -1              | 1.15            | 0.21                             | 3.15                           | 0                           | 0                         |
| 5725MHz to 5850MHz                           | -0.3            | -0.42           | -0.36                            | 2.65                           | 0                           | 0                         |

5150MHz to 5250MHz:

Power Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

PSD Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

5250MHz to 5350MHz:

Power Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

PSD Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

5470MHz to 5725MHz:

Power Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

PSD Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

5725MHz to 5850MHz:

Power Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

PSD Limit Reduction = Directional gain – 6dBi, (Directional gain < 6dBi) = 0

| Test Procedure:                                  | <ol style="list-style-type: none"> <li>1) The mains terminal disturbance voltage test was conducted in a shielded room.</li> <li>2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50μH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.</li> <li>3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,</li> <li>4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.</li> <li>5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.</li> </ol> |              |           |

## Measurement Data

An initial pre-scan was performed on the live and neutral lines with peak detector. Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

Phase: Line

## Final Data List

| NO. | Frequency [MHz] | Factor [dB] | QP Reading [dBμV] | QP Value [dBμV] | QP Limit [dBμV] | QP Margin [dB] | AV Reading [dBμV] | AV Value [dBμV] | AV Limit [dBμV] | AV Margin [dB] | Verdict |
|-----|-----------------|-------------|-------------------|-----------------|-----------------|----------------|-------------------|-----------------|-----------------|----------------|---------|
| 1   | 0.6855          | 10.57       | 21.28             | 31.85           | 56.00           | 24.15          | 2.89              | 13.46           | 46.00           | 32.54          | PASS    |
| 2   | 0.7215          | 10.56       | 21.31             | 31.87           | 56.00           | 24.13          | 2.85              | 13.41           | 46.00           | 32.59          | PASS    |
| 3   | 0.8385          | 10.54       | 16.43             | 26.97           | 56.00           | 29.03          | -3.07             | 7.47            | 46.00           | 38.53          | PASS    |
| 4   | 0.9240          | 10.57       | 14.12             | 24.69           | 56.00           | 31.31          | -4.72             | 5.85            | 46.00           | 40.15          | PASS    |
| 5   | 1.1400          | 10.69       | 9.78              | 20.47           | 56.00           | 35.53          | -4.01             | 6.68            | 46.00           | 39.32          | PASS    |
| 6   | 1.3470          | 10.78       | 5.75              | 16.53           | 56.00           | 39.47          | -5.91             | 4.87            | 46.00           | 41.13          | PASS    |

## Remark:

1. The following Quasi-Peak and Average measurements were performed on the EUT:
2. Value = Reading[dBμV] + Factor(Lin factor[dB] + cable loss[dB]).
3. Margin = Limit[dBμV] – Value[dBμV]

### 4.9 Radiated Spurious Emissions

|                   |                                                         |
|-------------------|---------------------------------------------------------|
| Test Requirement: | 47 CFR Part 15 Section 15.205 and 15.209                |
| Test Method:      | ANSI C63.10: 2013 Section 6.4 / 6.5 / 6.6               |
| Test Site:        | Measurement Distance: 3m or 10m (Semi-Anechoic Chamber) |
| Test frequency:   | 9kHz ~ 40GHz(or 10 Harmonic)                            |

#### Test Setup:

Figure 1. 9kHz to 30MHz

Figure 1. 30MHz to 1GHz

Figure 2. Above 1 GHz

#### Test Procedure:

- For below 1GHz test, the EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 or 10 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- For above 1GHz test, the EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation. (Distance from antenna to EUT is 1m for measurements >18GHz).
- The EUT was set 3 or 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and

### 4.10 Restricted bands around fundamental frequency

|                   |                                                  |                |               |
|-------------------|--------------------------------------------------|----------------|---------------|
| Test Requirement: | 47 CFR Part 15 Section 15.407(b)                 |                |               |
| Test Method:      | ANSI C63.10: 2013 Section 11.12                  |                |               |
| Test Site:        | Measurement Distance: 3m (Semi-Anechoic Chamber) |                |               |
| Limit:            | Frequency                                        | Limit (dBuV/m) | Remark        |
|                   | 30MHz-88MHz                                      | 40.0           | Quasi-peak    |
|                   | 88MHz-216MHz                                     | 43.5           | Quasi-peak    |
|                   | 216MHz-960MHz                                    | 46.0           | Quasi-peak    |
|                   | 960MHz-1GHz                                      | 54.0           | Quasi-peak    |
|                   | Above 1GHz                                       | 54.0           | Average Value |
|                   |                                                  | 74.0           | Peak Value    |

#### Test Setup:

#### Test Procedure:

- The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- Place a marker at the end of the restricted band closest to the transmit frequency to show compliance. Also measure any emissions in the restricted bands. Save the spectrum analyzer plot. Repeat for each power and modulation for lowest and highest channel
- Test the EUT in the outermost channels.
- The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, And found the X axis positioning which it is worse case.

## 4.11 Dynamic Frequency Selection

### 4.11.1 DFS Overview

**Table 1: Applicability of DFS Requirements Prior to Use of a Channel**

| Requirement                            | Operational Mode |                                |                             |
|----------------------------------------|------------------|--------------------------------|-----------------------------|
|                                        | Master           | Client Without Radar Detection | Client With Radar Detection |
| <i>Non-Occupancy Period</i>            | Yes              | Not required                   | Yes                         |
| <i>DFS Detection Threshold</i>         | Yes              | Not required                   | Yes                         |
| <i>Channel Availability Check Time</i> | Yes              | Not required                   | Not required                |
| <i>U-NII Detection Bandwidth</i>       | Yes              | Not required                   | Yes                         |

**Table 2: Applicability of DFS requirements during normal operation**

| Requirement                                                                                                                                                                                                                                                                                                                                                  | Operational Mode                                    |                                                      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------|------------------------------------------------------|
|                                                                                                                                                                                                                                                                                                                                                              | Master Device or Client with Radar Detection        | Client Without Radar Detection                       |
| <i>DFS Detection Threshold</i>                                                                                                                                                                                                                                                                                                                               | Yes                                                 | Not required                                         |
| <i>Channel Closing Transmission Time</i>                                                                                                                                                                                                                                                                                                                     | Yes                                                 | Yes                                                  |

| <i>U-NII Detection Bandwidth and Statistical Performance Check</i>                                                                                                                                                                                                                                                                                           | All BW modes must be tested                         | Not required                                         |
| <i>Channel Move Time and Channel Closing Transmission Time</i>                                                                                                                                                                                                                                                                                               | Test using widest BW mode available                 | Test using the widest BW mode available for the link |
| <i>All other tests</i>                                                                                                                                                                                                                                                                                                                                       | Any single BW mode                                  | Not required                                         |
| <b>Note:</b> Frequencies selected for statistical performance check (Section 7.8.4) should include several frequencies within the radar detection bandwidth and frequencies near the edge of the radar detection bandwidth. For 802.11 devices it is suggested to select frequencies in each of the bonded 20 MHz channels and the channel center frequency. |                                                     |                                                      |

#### 4.11.2 DFS Detection Thresholds

**Table 3: DFS Detection Thresholds for Master Devices and Client Devices with Radar Detection**

| Maximum Transmit Power                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Value<br>(See Notes 1, 2, and 3) |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| EIRP $\geq$ 200 milliwatt                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | -64 dBm                          |
| EIRP $<$ 200 milliwatt and power spectral density $<$ 10 dBm/MHz                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | -62 dBm                          |
| EIRP $<$ 200 milliwatt that do not meet the power spectral density requirement                                                                                                                                                                                                                                                                                                                                                                                                                                                              | -64 dBm                          |
| <p><b>Note 1:</b> This is the level at the input of the receiver assuming a 0 dBi receive antenna.</p> <p><b>Note 2:</b> Throughout these test procedures an additional 1 dB has been added to the amplitude of the test transmission waveforms to account for variations in measurement equipment. This will ensure that the test signal is at or above the detection threshold level to trigger a DFS response.</p> <p><b>Note3:</b> EIRP is based on the highest antenna gain. For MIMO devices refer to KDB Publication 662911 D01.</p> |                                  |

#### 4.11.3 RADAR TEST WAVEFORMS

**Table 5 – Short Pulse Radar Test Waveforms**

| Radar Type                                                                                                                                         | Pulse Width ( $\mu$ sec) | PRI ( $\mu$ sec)                                                                                                                                                                                                                                                                                    | Number of Pulses                                                                                                                     | Minimum Percentage of Successful Detection | Minimum Number of Trials |

| 23                                | 326.2                                          | 3066                                     |

The aggregate is the average of the percentage of successful detections of Short Pulse Radar Types 1-4. For example, the following table indicates how to compute the aggregate of percentage of successful detections.

| Radar Type                                             | Number of Trials | Number of Successful Detections | Minimum Percentage of Successful Detection |
|--------------------------------------------------------|------------------|---------------------------------|--------------------------------------------|
| 1                                                      | 35               | 29                              | 82.9%                                      |
| 2                                                      | 30               | 18                              | 60%                                        |
| 3                                                      | 30               | 27                              | 90%                                        |
| 4                                                      | 50               | 44                              | 88%                                        |
| Aggregate $(82.9\% + 60\% + 90\% + 88\%) / 4 = 80.2\%$ |                  |                                 |                                            |

#### 4.11.4 Response Requirements

**Table 4: DFS Response Requirement Values**

| Parameter                                | Value                                                                                                     |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <i>Non-occupancy period</i>              | Minimum 30 minutes                                                                                        |
| <i>Channel Availability Check Time</i>   | 60 seconds                                                                                                |
| <i>Channel Move Time</i>                 | 10 seconds<br>See Note 1.                                                                                 |
| <i>Channel Closing Transmission Time</i> | 200 milliseconds + an aggregate of 60 milliseconds over remaining 10 second period.<br>See Notes 1 and 2. |
| <i>U-NII Detection Bandwidth</i>         | Minimum 100% of the U-NII 99% transmission power bandwidth. See Note 3.                                   |

**Note 1:** *Channel Move Time* and the *Channel Closing Transmission Time* should be performed with Radar Type 0. The measurement timing begins at the end of the Radar Type 0 burst.

**Note 2:** The *Channel Closing Transmission Time* is comprised of 200 milliseconds starting at the beginning of the *Channel Move Time* plus any additional intermittent control signals required to facilitate a *Channel* move (an aggregate of 60 milliseconds) during the remainder of the 10 second period. The aggregate duration of control signals will not count quiet periods in between transmissions.

**Note 3:** During the *U-NII Detection Bandwidth* detection test, radar type 0 should be used. For each frequency step the minimum percentage of detection is 90 percent. Measurements are performed with no data traffic.

The detailed test data see: **Appendix**

## 5 Measurement Uncertainty (95% confidence levels, k=2)

| No. | Item                          | Measurement Uncertainty               |
|-----|-------------------------------|---------------------------------------|
| 1   | Total RF power, conducted     | $\pm 0.54\text{dB}$                   |
| 2   | RF power density, conducted   | $\pm 1.03\text{dB}$                   |
| 3   | Spurious emissions, conducted | $\pm 0.54\text{dB}$                   |
| 4   | Radio Frequency               | $\pm 1.0\%$                           |
| 5   | Duty Cycle                    | $\pm 0.37\%$                          |
| 6   | Occupied Bandwidth            | $\pm 1.0\%$                           |
| 7   | Conduction Emission           | $\pm 2.90\text{dB}$ (150kHz to 30MHz) |
| 8   | Radiated Emission             | $\pm 3.13\text{dB}$ (9k -30MHz)       |
|     |                               | $\pm 4.80\text{dB}$ (30M -1GHz)       |
|     |                               | $\pm 4.80\text{dB}$ (1GHz to 18GHz)   |
|     |                               | $\pm 4.80\text{dB}$ (Above 18GHz)     |

**Remark:**

The  $U_{\text{lab}}$  (lab Uncertainty) is less than  $U_{\text{CISPR/ETSI}}$  (CISPR/ETSI Uncertainty), so the test results

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

# Appendix

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

**Attention:** To check the authenticity of testing/inspection report & certificate, please contact us at telephone: (86-755) 8307 1443, or email: [CN\\_Doccheck@sgs.com](mailto:CN_Doccheck@sgs.com)

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Document.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.

Unless otherwise agreed in writing, this document is issued by the Company subject to its General Conditions of Service printed overleaf, available on request or accessible at <http://www.sgs.com/en/Terms-and-Conditions.aspx> and, for electronic format documents, subject to Terms and Conditions for Electronic Documents at <http://www.sgs.com/en/Terms-and-Conditions/Terms-e-Documents.aspx>. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein. Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. This document cannot be reproduced except in full, without prior written approval of the Company. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law. Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 30 days only.
