Table of contents

1. Scope
2. Environmental Requirement
3. Electrical Characteristic Measurement Method
4. Pictures of antenna and antenna type
5. Matching Circuit
6. Passive Measurement Data
7. Active Measurement Data
8. Antenna measurement spec on RF test jig
9. Mechanical layout and Dimensions

1. Scope

This document contains required environmental, electrical characteristic, mechanical, package and reliability test requirements.

2. Environmental Requirement

all components must be free from lead (Pb) and other banned or restricted substances according to customer's requirements.

3. Electrical Characteristic Measurement Method

3.1 Measurement method

To measure the Return Loss and VSWR, Smith Chart, Vector Network Analyzer Agilent E5071C was used. Satimo SG24 Anechoic chamber was used to measure the Efficiency, Gain, TRP and TIS.

3.1.1 Return Loss and VSWR

3.1.2 Efficiency, Gain, OTA measurement

3.1.3 Cutting plane and polarization

Phi=0deg

Phi=90deg

Theta=90deg

3.1.4 RF Jig

INNOWAVE designs a special S11 RF test jig for antenna test in mass production line. The antenna with average frequency in line is selected as reference antenna, and the results of the test jig is going to be correlated to the performance in the real phone.

4. Pictures of antenna and antenna type

WCN ant

ANT	Type	Material Quality
WCN	Internal	FPC

5. Matching Circuit

Bit number	Value
C14504	33pF

** RL spec presented in the table is only valid in INNOWAVE measurement condition. The measurement result can be different according to measurement conditions such as place, cable, tester and network analyzer etc. If the measurement condition is changed, make sure that reference frequency should be adjusted again by the provided reference antenna.
