FUNCTIONS AND BUTTONS

Connect Gen 4 to controller (First time connecting):

1. Turn on the Gen 4 By toggling the switch to the middle spot, you will be able to see a green LED flashing, this indicates the device is in search mode.

2. Turn on the Control Deck by pressing and holding the BE center button, (insert the battery at the same time), make sure you do not release the button until battery is inserted into the Control Deck. LED will change to solid green for 5 seconds and then start to blink slowly. The Control Deck is now connected to the Gen 4 unit.

Note: Once the Control Deck is turned on, it will stay in standby mode, there is no off unless battery is removed.

Function specification

1. The Gen 4 has 3 different toggle positions. 1. OFF (left) 2. ON (middle) 3. DE-ACTIVATE BE Link CONTROL PANEL - useful when BE Link is installed in helmets so buttons don't get pushed by accident (right). To turn on your BE Link, simply toggle the switch to the middle position, this will allow you to use the buttons on the BE Link. (to be able to use the Control Deck you must first connect the BE Link to the Control Deck, by following the steps above).

2. Toggle BE Link to the middle position. On your phone or other device, open your settings and turn on your bluetooth. Your Bluetooth should find 'BE LINK' for the device name. Sometimes you will have to click Search or a Refresh option. Click Pair or click on the 'BE LINK' in your bluetooth menu. YOU ARE NOW PAIRED and you can now choose your favorite media. Your BE Link will continuously flash a blue light every few seconds when it is paired to your phone.

3. When the BE Link battery is about to die it will start a small chime in the headset letting you know it is very low. The chime will increase until the BE Link powers down. We recommend that you plug in your BE Link at the first sound of the chime.

4. To charge the BE Link look at the bottom of the unit and you will see the micro USB access port for the unit. Simply plug in your BE Link to your computer or cell phone wall charger. You will know your hat is charging by a red light will shine on your BE Link. When the red light turns off the hat is fully charged, (2 hours is typical charge time).

5. The BE Link will go to sleep after three minutes of no use. It will automatically wake up if you get a call or you can simply tap the play/pause button and wait about 3 seconds and it will turn back on. The BE Link will stay paired to your device until you unpair it so there is no need to re-sync your BE Link every time you use it. Some phones, if they have been powered off, require the user to open the bluetooth menu and select "BE LINK" under the paired devices.

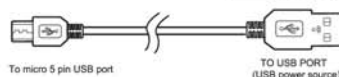

6. When using the Control Deck, press the middle bottom to turn on, a blue blinking light will start to flash. Once it is turned on it will automatically stay on stand by. After non use for a few minutes the Control Deck will go into sleep mode, to wake simply push center button.

NOTE: The beheadwear system is fully removable for washing your hat. Simply look at the back of your hat and on the inside you will see a small hole big enough for one finger to fit in. Place your finger in the hole and locate a small black cord. Gently pull on the cord to remove your speaker system and control panel. Use your other hand to help slide your speaker and control panel to the back of the hat, towards the hole and remove the system. PLEASE REMOVE YOUR HATS SPEAKER SYSTEM BEFORE WASHING.

FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
