

Difference Configuration Declaration

The P20R01 model comes in three versions:

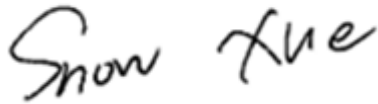

1.	HVIN:P2RW-A	No external backup power function - the device will shut down immediately after the adapter is unplugged.
2.	HVIN:P2RW-C	With built in super capacitor backup power function.
3.	HVIN:P2RW-B	With external battery backup power function - the device will continue to work as intended for several minutes after the adapter is unplugged. It's the same design with HVIN:P2RW-A, only add external battery.

The motherboard circuit design is identical across all versions; the only difference lies in whether the super capacitor and external battery are connected or not.
