This report relates only to items tested.

Measurement/Technical Report for
Mettrycom Communications Ltd.
Wireless Control & Data Acquisition System

R-FULL-CON-US-915 EXT ANT

FCC ID: 2AG7UMS3000-915

This report concerns:

Original Grant: X

Class I Change:

Class II Change:

Equipment type:

DSS – Spread Spectrum Transmitter

Limits used:

47CFR15 Section 15.247

Measurement procedures used are FCC Public Notice DA-00-705 and
ANSI C63.10: 2013.

Application for Certification

prepared by:

Declaration

Date: July 20, 2016

I hereby declare that the E.U.T. and model name of the unit tested at ITL Radio Laboratory on February 13, 2016 to February 14, 2016 is as follows:

E.U.T. Name: Wireless Control & Data Acquisition System

Model Name: R-FULL-CON-US-915 EXT ANT

Serial No.: Not designated

Thank you,

Liron Frenkel, CEO

1.2 List of Accreditations

The EMC laboratory of I.T.L. is accredited by the following bodies:

1. The American Association for Laboratory Accreditation (A2LA) (U.S.A.), Certificate No. 1152.01.
2. The Federal Communications Commission (FCC) (U.S.A.), FCC Designation No. IL1005.
3. The Israel Ministry of the Environment (Israel), Registration No. 1104/01.
4. The Voluntary Control Council for Interference by Information Technology Equipment (VCCI) (Japan), Registration Numbers: C-3006, R-2729, T-1877, G-245.
5. Industry Canada (Canada), IC File No.: 46405-4025; Site Nos. IC 4025A-1, IC 4025A-2.

I.T.L. Product Testing Ltd. is accredited by the American Association for Laboratory Accreditation (A2LA) and the results shown in this test report have been determined in accordance with I.T.L.'s terms of accreditation unless stated otherwise in the report.

1.3 *Product Description*

MetrySense-3000 is a modular low-power outdoor connectivity system that interfaces digital and analog sensors, meters and actuators and connects them via a low power wireless mesh-network to IP gateways and remote monitoring centers.

1.4 *Test Methodology*

Radiated testing was performed according to the procedures in FCC Public Notice DA 00-705 and ANSI C63.10: 2013. Radiated testing was performed at an antenna to EUT distance of 3 meters.

1.5 *Test Facility*

Emissions tests were performed at I.T.L.'s testing facility in Lod, Israel. I.T.L.'s EMC Laboratory is accredited by A2LA, certificate No. 1152.01 and its FCC Designation Number is IL1005.

1.6 *Measurement Uncertainty*

Radiated Emission

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for open site 30-1000MHz:

Expanded Uncertainty (95% Confidence, K=2):

± 4.96 dB

2. System Test Configuration

2.1 *Justification*

Testing was performed with E.U.T. wall mounted in installation position.

E.U.T. was transmitting at low (921.2MHz), mid (924.5MHz) and high channels (927.8MHz) with external antenna.

2.2 *EUT Exercise Software*

The EUT was tested when programmed with the formal, commercially released firmware, configured to transmit periodically at maximum transmission rate.

2.3 *Special Accessories*

No special accessories were needed in order to achieve compliance.

2.4 *Equipment Modifications*

No modifications were needed in order to achieve compliance.

2.5 *Configuration of Tested System*

Figure 1. Configuration of Tested System - Radiated

Figure 2. Configuration of Tested System - Conducted

3. Test Set-Up Photos

Figure 3. Radiated Emission Test

Figure 4. Radiated Emission Test

Figure 5. Radiated Emission Test

Figure 7. Conducted Tests

4. 20dB Minimum Bandwidth

4.1 Test Specification

F.C.C. Part 15, Subpart C: 15.247(a)(1)(i)

4.2 Test Procedure

The transmitter unit operated with normal modulation. The spectrum analyzer was set to 10 kHz resolution BW. The spectrum bandwidth of the transmitter unit was measured and recorded. The test was performed to measure the transmitter occupied bandwidth. The EUT was set up as shown in *Figure 2* and its proper operation was checked. The transmitter occupied bandwidth was measured with the spectrum analyzer as frequency delta between reference points on modulation envelope.

4.3 Test Results

Operation Frequency (MHz)	Bandwidth Reading (kHz)	Specification (kHz)
921.2	71.3	<250
924.5	70.1	<250
927.8	70.7	<250

9. Dwell Time on Each Channel

9.1 **Test Specification**

FCC Part 15, Section 15.247(a)(1)(i)

9.2 **Test Procedure**

The test was performed by Conducted method. The spectrum analyzer was set to 30 kHz VBW.

9.3 **Test Limit**

The average time of occupancy on any channel shall not be greater than 0.4 seconds within a period of 20 seconds.

9.4 **Test Results**

The E.U.T met the requirements of the FCC Part 15, Section 15.247(a)(1)(i).

JUDGEMENT: Passed

Additional information of the results is given in *Figure 29 to Figure 30*.

11. Emissions in Non-Restricted Frequency Bands

11.1 Test Specification

FCC, Part 15, Subpart C, Section 247(d)
FCC, Part 15, Subpart C, Section 209

11.2 Test Procedure

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

For 0.009MHz-1000MHz range:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and loop/broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The configuration tested is shown in *Figure 1*.

The frequency range 0.009 MHz-1000 MHz was scanned.

RBW was set to 100 kHz.

The emissions were measured using a computerized EMI receiver complying with CISPR 16 requirements.

In the frequency range of 9kHz-30MHz, the center of the loop antenna height was one meter above the ground.

In the frequency range of 30MHz-1000MHz, the readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

For 1000MHz-10000MHz range:

The E.U.T was placed in the chamber and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 1.5 meters above the ground. The configuration tested is shown in *Figure 1*.

The frequency range 1000 MHz-10000 MHz was scanned.

RBW was set to 100 kHz.

In the frequency range 30-7000MHz, a computerized EMI receiver complying with CISPR 16 requirements was used.

In the frequency range 7000MHz-10000 MHz, a spectrum analyzer including a low noise amplifier was used.

The readings were maximized by adjusting the turntable azimuth between 0-360°, and the antenna polarization.

For all final evaluations the distance was 3 meters.

The E.U.T. was operated at the operational frequencies of 921.2MHz and 927.8 MHz. These frequencies were measured using a peak detector.

11.3 **Test Limits**

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

11.4 **Test Results**

JUDGEMENT: Passed

All detected emissions were greater than 20dBc below the fundamental level.

The EUT met the requirements of the F.C.C. Part 15, Subpart C, Section 247(d) specification.

11.5 **Field Strength Calculation**

The field strength is calculated directly by the EMI Receiver software, and a "Correction Factors" data disk, using the following equation:

$$FS = RA + AF + CF$$

FS: Field Strength [dB μ V/m]
RA: Receiver Amplitude [dB μ V]
AF: Receiving Antenna Correction Factor [dB/m]
CF: Cable Attenuation Factor [dB]

Example: $FS = 30.7 \text{ dB}\mu\text{V (RA)} + 14.0 \text{ dB (AF)} + 0.9 \text{ dB (CF)} = 45.6 \text{ dB}\mu\text{V}$

No external pre-amplifiers are used.

12. Emissions in Restricted Frequency Bands

12.1 Test Specification

FCC, Part 15, Subpart C, Sections 15.209, 15.205, 15.247(d)

12.2 Test Procedure

For 0.009MHz-1000M range:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and loop/broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The configuration tested is shown in *Figure 1*.

The frequency range 0.009 MHz-1000 MHz was scanned.

The emissions were measured using a computerized EMI receiver complying with CISPR 16 requirements.

In the frequency range of 9 kHz-30MHz, the center of the loop antenna height was one meter above the ground.

In the frequency range of 30MHz-1000 MHz, the readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization.

For 1000M-10000M range:

The E.U.T was placed in the chamber and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 1.5 meters above the ground. The configuration tested is shown in *Figure 1*.

The frequency range 1000 MHz-10000 MHz was scanned.

The readings were maximized by adjusting the turntable azimuth between 0-360°, and the antenna polarization.

During average measurements, the IF bandwidth was 1 MHz and the video bandwidth was 100Hz. During peak measurements, the IF bandwidth was 1 MHz and the video bandwidth was 3 MHz.

In the frequency range 30-7000MHz, a computerized EMI receiver complying with CISPR 16 requirements was used.

In the frequency range 7000M-10000 MHz, a spectrum analyzer including a low noise amplifier was used.

For all final evaluations, the distance was 3 meters.

The E.U.T. was tested in 2 operating frequencies:

921.2MHz and 927.8 MHz.

The levels of the emissions within the frequency ranges of the restricted bands (Section 15.205 of FCC Part 15) were compared to the limits of the table in Section 15.209 (a), General Requirements.

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Frequency (MHz)	Field strength (microvolts/meter)	Measurement distance (meters)	Field strength* (dB μ V/m)	Field strength* (dB μ V/m)@3m
0.009-0.490	2400/F(kHz)	300	48.5-13.8	128.5-73.8
0.490-1.705	24000/F(kHz)	30	33.8-23.0	73.8-63.0
1.705-30.0	30	30	29.5	69.5
30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

Figure 40 Table of Limits

12.3 Test Results

JUDGEMENT: Passed

The EUT met the requirements of the F.C.C. Part 15, Subpart C specification.

For the operation frequency 921.2 MHz, the margin between the emission level and the specification limit is 2.9dB in the worst case at the frequency of 2763.5 MHz, vertical polarization.

For the operation frequency 927.815 MHz, the margin between the emission level and the specification limit is 2.7dB in the worst case at the frequency of 2783.4 MHz, horizontal polarization.

**Figure 41. Radiated Emission. Antenna Polarization: HORIZONTAL / VERTICAL.
Detector: Peak**

Margin refers to the test results obtained minus specified requirement; thus a positive number indicates failure, and a negative result indicates that the product passes the test.

“Peak Reading” includes correction factor.

“Correction Factor” = Antenna Factor + Cable Loss- Low Noise Amplifier Gain

Radiated Emission

E.U.T Description Wireless Control & Data
Acquisition System
Type R-FULL-CON-US-915 EXT ANT
Serial Number: Not designated

Specification: FCC, Part 15, Subpart C

Antenna Polarization: Horizontal/Vertical Frequency range: 30 MHz to 10.0 GHz
Test Distance: 3 meters Detector: Average

Operation Frequency	Freq.	Polarity	Average Result	Average Specification	Average Margin
(MHz)	(MHz)	(H/V)	(dB μ V/m)	(dB μ V/m)	(dB)
921.200	1842.0	H	43.3	54.0	-10.7
921.200	1842.0	V	45.3	54.0	-8.7
921.200	2763.5	H	49.1	54.0	-4.9
921.200	2763.5	V	51.1	54.0	-2.9
927.815	1855.5	H	45.9	54.0	-8.1
927.815	1855.5	V	46.4	54.0	-7.6
927.815	2783.4	H	51.3	54.0	-2.7
927.815	2783.4	V	49.1	54.0	-4.9

**Figure 42. Radiated Emission. Antenna Polarization: HORIZONTAL / VERTICAL.
Detector: Average**

Field Strength Calculation 30 – 1000 MHz

The field strength is calculated directly by the EMI Receiver software, and a "Correction Factors" data disk, using the following equation:

$$[\text{dB}\mu\text{V/m}] \text{ FS} = \text{RA} + \text{AF} + \text{CF}$$

FS: Field Strength [dB μ V/m]
RA: Receiver Amplitude [dB μ V]
AF: Receiving Antenna Correction Factor [dB/m]
CF: Cable Attenuation Factor [dB]

Example: FS = 30.7 dB μ V (RA) + 14.0 dB (AF) + 0.9 dB (CF) = 45.6 dB μ V

No external pre-amplifiers are used.

12.4 *Test Equipment Used, Spurious Radiated Emission Restricted Frequency Bands*

Figure 43 Test Equipment Used

13. Antenna Gain/Information

The antenna gain is 2.15dBi.

14. R.F Exposure/Safety

The EUT is a wireless control and data acquisition system. The typical placement of the E.U.T. is wall mounted. The typical distance between the E.U.T. and the user is 36cm.

Calculation of Maximum Permissible Exposure (MPE) Based on 47CFR1 Section 1.1310 Requirements

a. FCC Limit at 921.2 MHz is: $\frac{f}{1500} = 0.614 \frac{mW}{cm^2}$

Using Table 1 of 47CFR1 Section 1.1310 limit for general population/uncontrolled exposures, the above levels are an average over 30 minutes.

b. The power density produced by the E.U.T. is:

$$S = \frac{P_t G_t}{4\pi R^2}$$

P_t = Transmitted Power = 17.3 dBm = 54 mW

G_t = Antenna Gain = 2.15 dBi = 1.64 dBi numeric

R = Distance From Transmitter = 36 cm

c. The peak power density produced by the E.U.T. is:

$$S_{Avg} = \frac{54.0 \times 1.64}{4\pi(36)^2} = 0.0054 \frac{mW}{cm^2}$$

d. This value is below the FCC limit.

15. APPENDIX A - CORRECTION FACTORS

15.1 Correction factors for CABLE from EMI receiver to test antenna at 3 meter range.

Frequency (MHz)	Cable Loss (dB)	Frequency (MHz)	Cable Loss (dB)
0.010	0.4	50.00	1.2
0.015	0.2	100.00	0.7
0.020	0.2	150.00	2.1
0.030	0.3	200.00	2.3
0.050	0.3	300.00	2.9
0.075	0.3	500.00	3.8
0.100	0.2	750.00	4.8
0.150	0.2	1000.00	5.4
0.200	0.3	1500.00	6.7
0.500	0.4	2000.00	9.0
1.00	0.4	2500.00	9.4
1.50	0.5	3000.00	9.9
2.00	0.5	3500.00	10.2
5.00	0.6	4000.00	11.2
10.00	0.8	4500.00	12.1
15.00	0.9	5000.00	13.1
20.00	0.8	5500.00	13.5
		6000.00	14.5

NOTES:

1. The cable type is SPUMA400 RF-11N(X2) and 39m long
2. The cable is manufactured by Huber + Suhner

**15.2 Correction factors for Log Periodic Antenna
Model EMCO 3146
Serial 9505-4081**

CALIBRATION DATA

Frequency, MHz	Antenna factor, dB/m ¹⁾
200	11.55
250	11.80
300	14.43
400	15.38
500	17.98
600	18.78
700	21.17
800	21.16
900	22.67
1000	24.09

¹⁾ The antenna factor shall be added to receiver reading in dB μ V to obtain field strength in dB μ V/m.

15.3 Correction factors for Biconical Antenna
Model EMCO 3104
Serial 2606

CALIBRATION DATA

Frequency, MHz	Near free space antenna factor, dB/m	Geometry specific correction factor, dB	Free space antenna factor, dB/m ¹⁾
30	12.97	0.13	12.84
35	12.34	0.09	12.25
