| <b>Thank you for choosing Impact.</b>                                                                                                                                                                                                                                                                                                                                           |                                                    |
| The Impact Cruiser Wireless Controller is a compact wireless 2.4 GHz transmitter that provides the Cruiser TTL 500 Monolight with TTL and high-speed sync (HSS) functionality. It allows you to control and trigger the flash from a distance of 358 feet (100 m) via 2.4 GHz wireless transmission. It also sets channels, groups, and adjusts flash and modeling lamp output. |                                                    |
| The Cruiser Wireless Controller is compatible with most Canon, Nikon, and Sony cameras.                                                                                                                                                                                                                                                                                         |                                                    |
| Frequency                                                                                                                                                                                                                                                                                                                                                                       | 2.4 GHz                                            |

| <b>Note:</b> After approximately 20 second of inactivity, the LCD screen's illumination will go out as a power-saving measure.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                                                                                                                                         |

## Controller:

### 1. Group buttons

Press to select group A, B, or C. The selected group is outlined. Press and hold to enable or disable a group.

### 2. Mode button

Selects Manual or TTL mode.

### 3. Sync button (Canon and Sony)

Selects between first-curtain sync, second-curtain sync, and high-speed sync (HSS). Go to [impactstudiolighting.com](http://impactstudiolighting.com) for information on the Cruiser's compatibility with Sony cameras.

### 4. Plus (+) and minus (-) buttons

Raises and lowers the output power of the selected channel. Press to change power in increments of 1/10-stop. Press and hold to rapidly scroll

through the power range. In TTL mode, press to adjust EV compensation.

### 5. Power LED

Indicates when power is on.

### 6. Power button

Selects channels 1 to 8.

### 7. Channel button

Selects channels 1 to 8.

### 8. Test button

Fires a test flash.

### 9. Modeling light button

Turns the modeling light on and off for the selected group, and selects between 100% and 50% brightness. The modeling light can be set independently for each group.

### 10. Sound button

Turns the alert sound on and off.

### 11. Mounting foot

### 12. Locking collar

### 13. Battery compartment

The image displays two perspectives of the Impact Cruiser Wireless Controller. The top perspective shows the front face, which includes three group selection buttons (A, B, C) with yellow callouts 1, 2, and 3. Below these are the Mode (4), Sync (5), and Test (6) buttons. A central LCD screen (7) displays '00-09 00' and 'MODE SYNC CHANNEL'. To the right of the screen is a Power LED (8) and a Power button (9). Below the screen are Plus (+) (10) and Minus (-) (11) buttons. A Test button (12) is located to the right of the Plus/Minus buttons. The bottom perspective shows the rear of the device, featuring a Mounting foot (13), a Locking collar (14), and a Battery compartment (15).

FCC STATEMENT

1.This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:  
(1) This device may not cause harmful interference.  
(2) This device must accept any interference received, including interference that may cause undesired operation.

2.Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.  
Increase the separation between the equipment and receiver.  
Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.  
Consult the dealer or an experienced radio/TV technician for help.
