5.2.3. Transmitter Conducted Emissions Masks**Test Summary:**

Test Engineer:	Ben Mercer	Test Dates:	07 December 2015 & 08 December 2015
Test Sample Serial Numbers:	311510061 & 3115155009		

FCC Reference:	Parts 25.202(f) & 2.1051
Test Method Used:	FCC KDB 971168 Section 5.2.3 & 6

Environmental Conditions:

Temperature (°C):	22 to 24
Relative Humidity (%):	47 to 49

Note(s):

1. The top of the mask was referenced to the average conducted power measured using a power meter in accordance with KDB 971168 section 5.2.3.
2. Part 25.202(f) specifies emissions limitations in a 4 kHz bandwidth. The closest selectable resolution bandwidth of 4.3 kHz was set, and video bandwidth was set to 13 kHz. The number of measurement points was set to at least 2 x span / resolution bandwidth. An RMS detector was used, sweep time was set to auto and trace averaging was employed over 100 traces.
3. The spectrum analyser was connected to the antenna port on the EUT using suitable attenuation and coaxial cable. A reference level offset was entered on the spectrum analyser to compensate for the loss of the attenuator and coaxial cable.
4. The customer provided an OMT to adapt the circular waveguide flange at the antenna port to rectangular flanges to enable conducted measurements. The customer stated the worst case loss of the OMT as 0.5 dB. This loss was included in the reference level offset entered on the spectrum analyser.

Test setup:

Transmitter Conducted Emissions Masks (continued)**Results: 2.5 MHz / SF128 / Vertical****Bottom Channel****Middle Channel****Top Channel**

Transmitter Conducted Emissions Masks (continued)**Results: 2.5 MHz / SF128 / Horizontal****Bottom Channel****Middle Channel****Top Channel**
