

FCC/IC TEST REPORT

for

Audio Components International, Inc.

Powered Subwoofer

Model Number: Pulse SUB

FCC ID: 2AGTU-PULSESUB

IC: 20907-PULSESUB

Prepared for : Audio Components International, Inc.
Address : 27520 Hawthorne Blvd., Suite 169, Rolling Hills Estates,
CA 90274, USA

Prepared by : Keyway Testing Technology Co., Ltd.
Address : Baishun Industrial Zone, Zhangmutou Town,
Dongguan, Guangdong, China

Tel: 86-769-8718 2258
Fax: 86-769-8718 1058

Report No. : 16KWE114625F
Date of Test : Oct.19~Nov.03,2016
Date of Report : Nov.04, 2016

Keyway Testing Technology Co., Ltd.

Applicant: Address:	Audio Components International, Inc. 27520 Hawthorne Blvd., Suite 169, Rolling Hills Estates, CA 90274, USA		
Manufacturer: Address:	Audio Components International, Inc. 27520 Hawthorne Blvd., Suite 169, Rolling Hills Estates, CA 90274, USA		
E.U.T:	Powered Subwoofer		
Model Number:	Pulse SUB		
Trade Name:	N/A	Serial No.:	-----
Date of Receipt:	Oct.18 , 2016	Date of Test:	Oct.19~Nov.03,2015
Test Specification:	FCC Part 15, Subpart 15.407: 2015 ANSI C63.10:2013 KDB789033 D02 v01r03 RSS-247 Issue 1 May 2015 RSS-Gen Issue 4 November 2014		
Test Result:	The equipment under test was found to be compliance with the requirements of the standards applied.		
Issue Date: Nov.04, 2016			
Tested by:	Reviewed by:	Approved by:	
			
Keven Wu / Engineer	Mike Xu / Supervisor	Andy Gao / Supervisor	
Other Aspects:	None.		
Abbreviations: OK/P=passed fail/F=failed n.a/N=not applicable E.U.T=equipment under tested			
This test report is based on a single evaluation of one sample of above mentioned products. It is not permitted to be duplicated in extracts without written approval of Keyway Testing Technology Co., Ltd.			

1. TEST SUMMARY

Test Items	Test Requirement	Result
Conducted Emissions	15.207 RSS-Gen§8.8	PASS
Radiated Emissions	15.407(b),15.209 &RSS-Gen §6.13	PASS
26dB bandwidth and 99%dB Bandwidth	15.407 (a) &RSS-Gen§6.6	PASS
6dB bandwidth	15.407(e) & RSS-247 §6.2	PASS
Power density	15.407 (a) & RSS-247 §6.2	PASS
Maximum Peak Output Power	15.407 (a) & RSS-247 §6.2	PASS
Emissions from out of band	15.407 (b) & RSS-247 §6.2	PASS
Frequency Stability	15.407 (g) &RSS-Gen§8.11	PASS
Antenna Requirement	15.203&RSS-Gen§8.3	PASS

2. GENERAL PRODUCT INFORMATION

2.1 Product Function

Refer to Technical Construction Form and User Manual.

2.2 Description of Device (EUT)

Product Name:	Powered Subwoofer
Model No.:	Pulse SUB
Model Difference	N/A
Operation Frequency:	5.18GHz ~ 5.24GHz, 5.736GHz~5.814GHz
Channel numbers:	3 Channel for 5.2G, 3 Channel for 5.8G
Modulation technology:	QPSK (DSSS)
Antenna Type:	PCB ANT
Antenna gain:	ANT A:2.408dBi ANT B:2.408dBi
Power supply:	AC 120V/60Hz

2.3 Channel List

Channel	Frequency (MHz)
01	5180
02	5210
03	5240
04	5736
05	5762
06	5814

2.4 Independent Operation Modes

The basic operation modes are:

EUT work TX mode, and frequency as below:

5.2G

Channel	Frequency
Low	5180
Middle	5210
High	5240

5.8G

Channel	Frequency
Low	5736
Middle	5762
High	5814

2.5 Test Supporting System

Antenna A/ B are transmitting, two antennas simultaneously transmit. And the worst data is recorded for radiated emission and band edge.

For MIMO mode , Directional gain=GANT +10log(N)dbi =5.42dbi

The EUT has MIMO mode.

2.6 Product Version

Product SW version	101CP-D2
Product HW version	101CP-D2
Radio SW version	DWAM83 TB
Radio HW version	DWAM83 TB
Test SW Version	V1.0
RF power setting in TEST SW	4dBm for 5.2G, -3dBm for 5.8G

2.7 TEST SITES

Test Facilities

Lab Qualifications : Certificated by Industry Canada

3. TEST SET-UP AND OPERATION MODES

3.1 Principle of Configuration Selection

Emission: The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes were adapted accordingly in reference to the Operating Instructions.

3.2 Block Diagram of Test Set-up

System Diagram of Connections between EUT and Simulators

(EUT: Powered Subwoofer)

3.3 Special Accessories and Auxiliary Equipment

None.

3.4 Countermeasures to Achieve EMC Compliance

None.

4. EMISSION TEST RESULTS

4.1 Conducted Emission at the Mains Terminals Test

Limit 15.207 limits

FREQUENCY OF EMISSION (MHz)	CONDUCTED LIMIT (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56	56 to 46
0.5-5	56	46
5-30	60	50

Test Setup

The EUT was put on a wooden table which was 0.8 m high above the ground and connected to the AC mains through the Artificial Mains Network (AMN). Where the mains cable supplied by the manufacture was longer than 0.8 m, the excess was folded back and forth parallel to the cable at the centre so as to form a bundle no longer than 0.4 m.

The EUT was kept 0.4 m from any other earthed conducting surface. Both sides of AC line were checked to find out the maximum conducted emission levels according to the test procedure during the conducted emission test.

The frequency range from 150 kHz to 30 MHz was investigated.

The bandwidth of the test receiver was set at 9 kHz.

Pretest for all mode, The test data of the worst case condition(s) was reported on the following page.

Remark:
E.U.T: Equipment Under Test
LISN: Line Impedance Stabilization Network
Test table height=0.8m

12.57675 - 12.57725	322 - 335.4	3600 - 4400	(²)

All the emissions appearing within 15.205 restricted frequency bands shall not exceed the limits shown in 15.209, all the other emissions shall be at least 20dB below the fundamental emissions, or comply with 15.209 limits.

Test setup

The EUT was placed on a turn table which was 0.8 m (above 1GHz, the high was 1.5m) above the ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT was set 3 m away from the receiving antenna which was mounted on an antenna tower. The measuring antenna moved up and down to find out the maximum emission level. It moved from 1 m to 4 m for both horizontal and vertical polarizations.

The EUT was tested in the Chamber Site. It was pre-scanned with a Peak detector from the spectrum, and all the final readings from the test receiver were measured with the Quasi-Peak detector.

The bandwidth of the EMI test receiver is set at 120kHz for frequency range from 30MHz to 1000 MHz.

The bandwidth of the Spectrum's VBW is set at 3MHz and RBW is set at 1MHz for peak emissions measurement above 1GHz and 1MHz RBW, 10Hz VBW for average emissions measure above 1GHz, Both PK and AV measure, PK detector is used.

The frequency range from 30MHz to 10th harmonic are checked. and no any emissions were found from 18GHz to 40 GHz, So the radiated emissions from 18GHz to 40GHz were not record.

Notes: 1. Emission Level = Antenna Factor + Cable Loss + Meter Reading-Preamp Factor.

2. Measurement Uncertainty: ± 3.2 dB at a level of confidence of 95%.

3. For emissions above 1GHz, if peak level comply with average limit, then the average level is deemed to comply with average limit.

4. For emissions below 1GHz, pretest for all mode, The test data of the worst case condition(s) was reported on the following pages.

5. For Both PK and AV value above 1GHz, PK detector is used.

The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has not to be reported.

5. BAND EDGE COMPLIANCE TEST

5.1 Limits

Band 5.15-5.25GHz:

FCC: all emissions outside of the 5.15-5.35 GHz band shall not exceed an EIRP of -27 dBm/MHz.

IC: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated device is operating, the RF power that is produced shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided that the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of root-mean-square averaging over a time interval, as permitted under Section 5.4(4), the attenuation required shall be 30 dB instead of 20 dB. Attenuation below the general field strength limits specified in RSS-Gen is not required.

FCC: For the band 5725-5850 MHz , All emissions shall be limited to a level of -27 dBm/MHz at 75 MHz or more above or below the band edge increasing linearly to 10 dBm/MHz at 25 MHz above or below the band edge, and from 25 MHz above or below the band edge increasing linearly to a level of 15.6 dBm/MHz at 5 MHz above or below the band edge, and from 5 MHz above or below the band edge increasing linearly to a level of 27 dBm/MHz at the band edge.

IC: For the band 5725-5825 MHz, emissions within the frequency range from the band edges to 10 MHz above or below the band edges shall not exceed -17 dBm/MHz e.i.r.p. For frequencies more than 10 MHz above or below the band edges, emissions shall not exceed -27 dBm/MHz.

5.2 Test setup

Test method: FCC KDB 789033 G)& Parts 15.407(b)(4) & 15.209(a)

Same as Clause 4.2.

5.3 Test Data

Please see data as below:

Note: we pretest horizontal and vertical, the worst was vertical and show in the report.

Frequency	Meter Reading	antenna Factor	cable loss	preamp factor	Emission Level	EIRP	Limit	Result
(MHz)	(dBμV)	(dB)	(dB)	(dB)	(dBμV/m)	[dBm]	[dBm]	
5.2G

5814	79.14	27.78	15.56	27.68	94.80	-0.40	27.00	Pass

Remark: 1. According to KDB 789033 D02 section H) d) (iii), for measurement above 1000MHz@3m distance, the limit of EIRP is calculated as follows: $EIRP[dBm] = E[dBμV/m] - 95.2$

For conducted test:

5.2G

Band Edge, Left Side

Band Edge, Right Side

Note: EIRP BAND EDGE=Reading Level+antenna gain

5.8G

Band Edge, Left Side

Band Edge, Right Side

Note: EIRP BAND EDGE=Reading Level+antenna gain

6. 26DB AND 6DB BANDWIDTH TEST

6.1 Applicable Standard

The bandwidth at 26 dB down from the highest in-band spectral density is measured with a spectrum analyzer connected to the antenna terminal while the EUT is operating at its maximum power control level, as defined in KDB 789033, at the appropriate frequencies. The spectrum analyzer's bandwidth measurement function is configured to measure the 26 dB bandwidth. The 26 dB bandwidth is used to determine the conducted power limits. The minimum of 6dB Bandwidth measurement is 0.5 MHz for U-NII-3

6.2 Test Procedure

1. Emission Bandwidth (EBW)

- Set RBW = approximately 1% of the emission bandwidth.
- Set the VBW > RBW.
- Detector = Peak.
- Trace mode = max hold.
- Measure the maximum width of the emission that is 26 dB down from the maximum of the emission. Compare this with the RBW setting of the analyzer. Readjust RBW and repeat measurement as needed until the RBW/EBW ratio is approximately 1%.

2. Minimum Emission Bandwidth for the band 5.725-5.85 GHz

Section 15.407(e) specifies the minimum 6 dB emission bandwidth of at least 500 KHz for the band 5.715-5.85 GHz. The following procedure shall be used for measuring this bandwidth:

- Set RBW = 100 kHz.
- Set the video bandwidth (VBW) $\geq 3 \times$ RBW.
- Detector = Peak.
- Trace mode = max hold.
- Sweep = auto couple.
- Allow the trace to stabilize.
- Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

6.3 Test setup

7. OUTPUT POWER TEST

7.1 Limits

Band 5.15-5.25GHz:

FCC: For mobile and portable client devices in the 5.15-5.25 GHz band, the maximum conducted output power over the frequency band of operation shall not exceed 250 mW provided the maximum antenna gain does not exceed 6 dBi.

IC: The maximum e.i.r.p. shall not exceed 200 mW or $10 + 10\log B$ dBm, whichever power is less. B is the 99% emission bandwidth in MHz.

Band 5.725-5.825GHz:

FCC: For the band 5.725-5.85 GHz, the maximum conducted output power over the frequency band of operation shall not exceed 1 W.

IC: The maximum conducted output power shall not exceed 1 W.

7.2 Test setup

1. The maximum average conducted output power can be measured using Method PM-G (Measurement using a gated RF average power meter):
2. Measurements may be performed using a wideband gated RF power meter provided that the gate parameters are adjusted such that the power is measured only when the EUT is transmitting at its maximum power control level. Since the measurement is made only during the ON time of the transmitter, no duty cycle correction factor is required.
 - a. The Transmitter output (antenna port) was connected to the power meter.
 - b. Turn on the EUT and power meter and then record the power value.
 - c. Repeat above procedures on all channels needed to be tested.

Duty cycle

7.3 Test result

Frequency (MHz)	Average Output Power (dBm) ANT A	Average Output Power (dBm) ANT B	Total power (dBm)	IC Limit (dBm)	FCC Limit (dBm)	Result
5180	4.378	3.575	7.01	-	24	Pass
5210	4.467	3.754	7.14	-	24	Pass
5240	4.765	3.679	7.27	-	24	Pass
5736	-2.124	-3.253	0.36	30	30	Pass
5762	-1.768	-3.254	0.56	30	30	Pass
5814	-1.834	-3.353	0.48	30	30	Pass

For 5.15~5.25GHz, the limit=200 mW or 10 +10logB dBm, whichever power is less

For 5.725-5.825GHz, the limit=1 W

EIRP=output power+antenna gain

Frequency (MHz)	Average Output Power (dBm)	Antenna Gain (dBi)	EIRP(dBm)	IC Limit (dBm)
5180	7.01	5.42	12.43	21.8
5210	7.14	5.42	12.56	21.8
5240	7.27	5.42	12.69	21.8

NOTE: During the test the EUT is in 100% duty cycle transmitting.

Test plot of Duty Cycle

8. PEAK POWER SPECTRAL DENSITY TEST

8.1 Limits

Band 5.15-5.25GHz:

FCC: In addition, the maximum power spectral density shall not exceed 11 dBm in any 1 megahertz band.

IC: The e.i.r.p. spectral density shall not exceed 10 dBm in any 1.0 MHz band..

Band 5.725-5.825GHz:

FCC: In addition, the maximum power spectral density shall not exceed 30 dBm in any 500-kHz band.

IC: The power spectral density shall not exceed 30 dBm in any 500 kHz band. If transmitting antennas of directional gain greater than 6 dBi are used.

8.2 Test setup

Methods refer to FCC KDB 789033

- 1) Create an average power spectrum for the EUT operating mode being tested by following the instructions in section E)2) for measuring maximum conducted output power using a spectrum analyzer or EMI receiver: select the appropriate test method (SA-3, or alternatives to each) and apply it up to, but not including, the step labeled, "Compute power...".
- 2) Use the peak search function on the instrument to find the peak of the spectrum.
- 3) The result is the PPSD.
- 4) The above procedures make use of 1 MHz resolution bandwidth to satisfy the 1 MHz measurement bandwidth specified in the 15.407(a)(5). That rule section also permits use of resolution bandwidths less than 1 MHz "provided that the measured power is integrated to show the total power over the measurement bandwidth" (i.e., 1 MHz). If measurements are performed using a reduced resolution bandwidth and integrated over 1 MHz bandwidth

8.3 Test data

Test data as below

For FCC:
5.15-5.25GHz

Frequency (MHz)	Power Density. Antenna A	Power Density. Antenna B	Total power	FCC Limit (dBm/MHz)

9. FREQUENCY STABILITY TEST

9.1.limit

According to §15.407(g), manufacturers of U-NII devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual.

9.2 Test Configuration

9.3 test procedure

1. The transmitter output (antenna port) was connected to the spectrum analyzer.
2. EUT have transmitted absence of modulation signal and fixed channelize.
3. Set the spectrum analyzer span to view the entire absence of modulation emissions bandwidth.
4. Set RBW = 10 kHz, VBW = 10 kHz with peak detector and maxhold settings.
5. f_c is declaring of channel frequency. Then the frequency error formula is $(f_c - f)/f_c \times 10^6$ ppm and the limit is less than ± 20 ppm (IEEE 802.11 specification).
6. The test extreme voltage is to change the primary supply voltage from 85 to 115 percent of the nominal value
7. Extreme temperature rule is $-30^\circ\text{C} \sim 50^\circ\text{C}$.

Test result

Measurement Data (the worst channel):

Frequency Stability under Temperature

Frequency Stability under Voltage

Operating Frequency: 5180 MHz			
AC Voltage (V)	Measured Frequency (MHz)	Test Result (MHz)	Max. Deviation (ppm)
102	5180	5180.0132	2.548
120	5180	5180.0238	4.595
138	5180	5180.0134	2.587

10.ANTENNA REQUIREMENTS

10.1 Limits

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. And according to FCC 47 CFR Section 15.247 (b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

10.2 Result

The antennas used for this product is PCB antenna and that no antenna other than that furnished by the responsible party shall be used with the device, the maximum peak gain of the transmit antenna is only 2.408dBi.
