RE: Justification for label location regarding application for certification of

FCC ID: 2AGV7ROSE1

IC Number: 20974-ROSE1

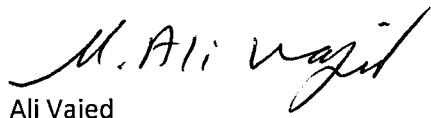

To Whom It May Concern:

This letter is to justify the choice of label location for the device bearing the above FCC ID and IC Number. The location was chosen to be behind the Front part of the device since there is push button membrane covering the entire front of the device where the end user sees during normal operation. SGD also wants to use the front side for marketing information (eg. Brand or trademark) and does not want label information on this side. For these reasons, behind the Front part is the only logical choice.

The unit is made of two pieces; Front and back. For installation and setup they come apart using a flat screw driver. The Front part contains the PC board and it is sealed at the factory. The label is affixed to the back of the piece and during the installation and setup it is readily viewable to the device purchaser and the end user.

Please contact the undersigned if you have any questions or need any further information.

Regards,

Ali Vajed
