

Meat Probe Extender Set

Quick Start Guide

Step 1 | **Download**

Download MeatProbe app on iOS or Android to your smart device.

Step 2 | **Power**

Use the included micro USB cable to power the Charger with MeatProbe. Insert 2 AA batteries into the Extender. (Batteries not included)

Step 3 | **Setup**

Launch MeatProbe app and follow the instructions to setup an account and your MeatProbe.

Step 4 | **Extender**

The Extender is meant to be placed in the vicinity of MeatProbe. When you're ready to cook, switch it on, place it nearby, and you're good to go.

Step 5 | **MeatProbe**

It is recommended to charge MeatProbe for at least an hour before the first use.

Step 6 | **Let's Cook!**

With everything setup and ready to go, add a recipe in the app and get cooking.

Enjoy your perfectly cooked meat!

Meat Probe Extender FAQ

How does the Extender work?

When the Extender is turned on, it will take any signals from nearby MeatProbe and amplify and rebroadcast the signal. Just turn it on and place it nearby as you get your cook on.

How close does the Extender need to be to MeatProbe?

Ideally, the closer the better. Try to set it somewhere nearby, shaded, and open without covering it up. If you do need to cover it up to protect against rain or direct sunlight, don't cover it up with anything metal as that will affect the signal range.

What happens if I don't use the Extender?

MeatProbe itself will work without the Extender; however, range of the signal will be greatly limited depending on if MeatProbe is enclosed.

Is there an optimal placement method?

Yes! To maximize the range, it is best to have the Extender standing up facing the direction you'd like to receive the signal. If you do use the attached magnet to place on your oven/grill, do make sure it is not placed on a surface that gets hot.

Extender

FCC Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Extender

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

RF Exposure

To maintain compliance with FCC's RF Exposure guidelines. This device and its antenna(s) must not be co-located or operation in conjunction with any other antenna or transmitter.
