

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Conducted Emission Test Setup	 A photograph showing a conducted emission test setup. On the left, a piece of electronic equipment (likely a spectrum analyzer or noise meter) sits on a wooden table. A red cable connects it to a power supply unit on the floor. To the right, a large wooden board is positioned vertically, with a white probe or antenna attached to its top edge. The background shows a plain wall and a power outlet.
Radiation Emission Test Setup (Below 30MHz)	 A photograph of a radiation emission test chamber. The interior walls are lined with white, square-shaped electromagnetic absorbers. In the center, a yellow test fixture is mounted on a stand. A metal frame structure is visible in the foreground, and a small cylindrical object is placed on a surface within the chamber. The floor is dark and reflective.

Radiation Emission Test Setup (30MHz to 1GHz)	 A photograph of a radiation emission test setup for the 30MHz to 1GHz range. A yellow, rectangular test chamber is positioned on a circular turntable in the center of an anechoic chamber. The walls of the chamber are covered with white, square-shaped absorbers. To the right, a metal frame with vertical rods is visible. The floor is marked with yellow and black diagonal stripes.
Radiation Emission Test Setup (Above 1GHz)	 A photograph of a radiation emission test setup for frequencies above 1GHz. A smaller, white, rectangular test chamber is placed on a yellow base, which is itself on a circular turntable. The anechoic chamber walls are visible in the background. To the right, a red, curved object with a label is partially visible. The floor is marked with yellow and black diagonal stripes.
