Common Information

Test description:	Magnetic Field Strength Measurement related to 30/300 m distance
Test Site Location:	Ref.-Nr. 441 Semi Anechoic Chamber (SAC1) with 3 m measurement distance
Version of Testsoftware:	EMC32 V10.50.0
Distance correction:	used accord. table, pls. see test report
Technical Data:	Please see page 2 for detailed data of measurement setup
Rec. antenna (pre-scan):	height 1.00 m, parallel and 90° to EUT polarisation
Used filter:	bypass
Test Standard:	FCC 15.205 § 15.209; RSS-Gen: Issue 5
Operator:	LKnopp
Operating Mode:	UWB
Power during tests:	24V DC by Battery
Comment 1:	Antenna standing / RF-Path A

1.3.12 Transmit timing (§FCC15.517 (a)(5))

According applicants information, different samples of the CorivaSat devices communicate each other under the control of a central unit (AE3).

As the unit AE3 can determine and monitor the presence of available devices, it also instructs the EUT to stop communications in case no associated receiver is available. Following diagrams shows the time behaviour for both simulated cases.

Set-up 3 with EUT 3 was used during the tests.

TID009_04_Timing_Sattelite_Master#EMV2_to_Slave#EMV1_Communication

Communication to an associated receiver (AE4) during a 50ms period: two packet transmissions

TID009_05_Timing_Sattelite_Master#EMV2_to_Slave#EMV1_Communication_1Minute_Screenshot

Communication to an associated receiver (AE4) during a 1 minute period: continuous transmissions

TID009_06_Timing_Sattelite_Master#EMV2_no_Slave#EMV1_1Minute_Screenshot

09:30:18 AM 02/21/2024

Communication to an associated receiver (AE4) **during** a 1 minute period: continuous transmissions when AE4 disconnects from control unit (AE3)
Communication is stopped after recognition of no receiver presence.
