

Circuit Description

Bluetooth chip AC6368, when connected to the battery, Wave dialing switch SW1. The battery and IC 1-pin VDDIO are connected. 24MHz crystal vibration, Bluetooth IC starts to work, the chip's 4 feet come out from the bluetooth antenna(2402Mhz -2480Mhz) . When the Bluetooth IC works, The phone connects to the product's Bluetooth , Turn on your phone's camera , Press the S1 button or the S2 button, Mobile phones can take pictures from a distance.

Modulation Technique: GFSK

Antenna Specification: PCB Antenna: 0dBi
