Abstract

This report has been prepared on behalf of Guangdong Meijiixin Innovative Technology Co., Ltd to support the attached Application for Equipment Authorization. The test report and application are submitted for a Spread Spectrum Transceiver under Part 15.249 of the FCC Rules and Regulations. This Federal Communication Commission (FCC) Certification Test Report documents the test configuration and test results for Guangdong Meijiixin Innovative Technology Co., Ltd RC Drone.

And Testing was performed by Compliance Certification Services (Shenzhen) Inc. has been accepted by the FCC, the FCC Registration Number is 441872.

RC Drone is a RF device and complies with the limits for a Direct Sequence Spread Spectrum Transmitter device under Part 15.249 of the FCC Rules and Regulations.

1 Introduction

1.1 Compliance Statement

After the modifications listed in Section 2.6 were installed:

The Guangdong Meijiixin Innovative Technology Co., Ltd RC Drone complies with the limits for a Spread Spectrum Transceiver device under Part 15.249 of the FCC Rules and Regulations.

1.2 Test Scope Summary

Tests for radiated and conducted emissions were performed. All measurements were performed according to the 2013 version of ANSI C63.10

2 Equipment Under Test

2.1 EUT Identification

The results obtained relate only to the item(s) tested.

Table 1: Overview of RC Drone, Equipment Under Test

ITEM	DESCRIPTION
FCC ID Number	2AHV3GR902
EUT Name:	RC Drone
Test Model:	X902
FCC Rule Parts:	§15.249
Frequency Range:	2410MHz – 2478MHz
Maximum Field Strength:	90.51 dBμV/m
Modulation Technology:	GFSK
Necessary Bandwidth:	N/A
Keying:	Automatic
Type of Information:	General 2.4GHz: GFSK
Number of Channels:	69
Antenna Type	Whip
Antenna Gain	2dBi±0.5
Frequency Tolerance:	N/A
Emission Type(s):	N/A
Interface Cables:	None
Power Source & Voltage:	DC 4.5V (3 X AAA Battery)

2.2 EUT Description

Product Name: RC Drone

Model No. : X900, X901, X902, X903, X904, X905, X906T, X916H, X909T, X919H,
X910T, X911H, X908T, X918H

Test Model: X902

EUT Rated Voltage: DC 4.5V (3 X AAA Battery)

Declaration on model difference 产品差异声明

We the undersigned hereby confirm that any of our production units bearing the following model numbers are identical in circuitry and electrical, mechanical and physical construction; the only differences are the appearance, trade name and model no. for trading purpose.

我们在下面签名并据此确认:以下产品型号之间的差异仅为外观、商标及型号不同,其它设计完全相同。

- The above appearance is for color and silk-screen only.
上述所说外观仅指产品的颜色及丝印。

2.3 Test Configuration

The Guangdong Meijiixin Innovative Technology Co., Ltd RC Drone, Equipment Under Test (EUT), was operated from 4.5VDC (3 X AAA Battery).

The EUT firmware/software was set up to control power, bit rate, and channel selection.

Conducted test setup:

Not Applicable

Radiated Emissions test setup:

Figure 1: Test Configuration

2.4 Equipment Configuration

The EUT was set up as outlined in Figure 1. The EUT was comprised of the following equipment. (All Modules, PCBs, etc. listed were considered as part of the EUT, as tested.)

Table 2: Equipment Configuration

Name / Description	Model Number	Part Number	Serial Number	Revision
RC Drone	X902	/	/	/

2.5 Support Equipment

The following support equipment was used during testing:

No.	Description	ACS No.	Manufacturer	Model	Serial Number
1.	--	--	--	--	--

2.6 EUT Modifications

N/A

2.7 Testing Algorithm

RC Drone was operated continuously by normal operating conditions.

2.8 Test Location

And Testing was performed by Compliance Certification Services (Shenzhen) Inc. has been accepted by the FCC, the FCC Registration Number is 441872.

2.9 Measurements

2.9.1 Measurement Method

All measurements were performed according to the 2013 version of ANSI C63.10 for testing compliance of a wide variety of unlicensed wireless devices

2.9.2 Measurement Uncertainty

All results reported herein relate only to the equipment tested. The basis for uncertainty calculation uses ANSI/NCSL Z540-2-1997 with a type B evaluation of the standard uncertainty. Elements contributing to the standard uncertainty are combined using the method described in Equation 1 to arrive at the total standard uncertainty. The standard uncertainty is multiplied by the coverage factor to determine the expanded uncertainty which is generally accepted for use in commercial, industrial, and regulatory applications and when health and safety are concerned (see Equation 2). A coverage factor was selected to yield a 95% confidence in the uncertainty estimation.

Equation 1: Standard Uncertainty

$$u_c = \pm \sqrt{\frac{a^2}{div_a^2} + \frac{b^2}{div_b^2} + \frac{c^2}{div_c^2} + \dots}$$

where u_c = standard uncertainty

a, b, c,.. = individual uncertainty elements

$div_{a, b, c}$ = the individual uncertainty element
divisor based on the probability
distribution

divisor = 1.732 for rectangular distribution

divisor = 2 for normal distribution

divisor = 1.414 for trapezoid distribution

Equation 2: Expanded Uncertainty

$$U = ku_c$$

where U = expanded uncertainty
k = coverage factor
k ≤ 2 for 95% coverage (ANSI/NCSL Z540-2
Annex G)
u_c = standard uncertainty

The measurement uncertainty complies with the maximum allowed uncertainty from CISPR 16-4-2. Measurement uncertainty is not used to adjust the measurements to determine compliance. The expanded uncertainty values for the various scopes in the WLL accreditation are provided in Table 3 below

Table 3: Expanded Uncertainty List

Scope	Expanded Uncertainty
Uncertainty for Radiation Emission test in 3m chamber	2.6dB(30~200MHz, Polarize: H)
	2.6dB(30~200MHz, Polarize: V)
	3.0dB(200M~1GHz, Polarize: H)
	2.8dB(200M~1GHz, Polarize: V)
Uncertainty for Radiation Emission test in 3m chamber (1GHz-18GHz)	6.3dB (1~6GHz, Distance: 3m)
	5.7dB (6~18GHz, Distance: 3m)
Uncertainty for Radiated Spurious Emission test in RF chamber	3.6dB
Uncertainty for Conduction Spurious emission test	2.0dB
Uncertainty for Output power test	0.8dB
Uncertainty for Power density test	2.0dB
Uncertainty for Frequency range test	7×10^{-8}
Uncertainty for Bandwidth test	83 kHz
Uncertainty for DC power test	0.1%
Uncertainty for test site temperature and humidity	0.6°C
	3%

3 Test Equipment

Table 4 shows a list of the test equipment used for measurements along with the calibration information.

9.	Test S/W	FARAO	LZ-RF / CCS-SZ-3A2			

4 System Test Configuration

For emissions testing, the equipment under test (EUT) setup to transmit continuously to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, all cables were manipulated to produce worst case emissions. It was powered by a 4.5V DC (3 X AAA Battery). Only the worst case data were recorded in this test report.

The signal is maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization are varied during the search for maximum signal level. The antenna height is varied from 1 to 4 meters. Radiated emissions are taken at three meters unless the signal level is too low for measurement at that distance. If necessary, a pre-amplifier is used and/or the test is conducted at a closer distance.

All readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance. Analyzer resolution is 100 kHz or greater for frequencies below 1000 MHz. The resolution is 1 MHz or greater for frequencies above 1000 MHz. The spurious emissions more than 20 dB below the permissible value are not reported.

Radiated emission measurement were performed from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

5 Test Results

5.1 Radiated Emissions:

Radiated emissions that fall in the restricted bands must comply with the general emissions limits in 15.209(a).

The emissions were measured using the following resolution bandwidths:

Frequency Range	Resolution Bandwidth	Video Bandwidth
30MHz-1000 MHz	120kHz	>30 kHz
>1000 MHz	1 MHz	<30 Hz

Harmonic and Spurious emissions that were identified as coming from the EUT were checked in Peak and in Average Mode. The high frequency, which started from 18 to 26.5GHz, was pre-scan and the test result which was 20dB lower than the limit was not reported.

Peak measurements and average measurements are made. All emissions were determined to have a peak-to-average ratio of less than 20 dB.

5.1.1 Limit

Field strength of the fundamental signal (FCC Part 15.249a)

Frequency	Limit (dBμV/m @3m)	Remark
2400MHz-2483.5MHz	94.0	Average Value
	114.0	Peak Value

Radiated Emission (FCC Part 15.249a/15.209)

Frequency	Field strength (microvolt/meter)	Limit (dBμV/m)	Remark	Measurement distance (m)
0.009MHz-0.490MHz	2400/F(kHz)	-	-	300
0.490MHz-1.705MHz	24000/F(kHz)	-	-	30
1.705MHz-30MHz	30	-	-	30
30MHz-88MHz	100	40.0	Quasi-peak	3
88MHz-216MHz	150	43.5	Quasi-peak	3
216MHz-960MHz	200	46.0	Quasi-peak	3
960MHz-1GHz	500	54.0	Quasi-peak	3
Above 1GHz	500	54.0	Average	3

Note: 15.35(b), Unless otherwise specified, the limit on peak radio frequency emissions is 20dB above the maximum permitted average emission limit applicable to the equipment under test. This peak limit applies to the total peak emission level radiated by the device.

5.1.2 Test Procedure

The EUT was placed on motorized turntable for radiated testing on a 3-meter open field test site. The emissions from the EUT were measured continuously at every azimuth by rotating the turntable. Receiving antennas were mounted on an antenna mast to determine the height of maximum emissions. The height of the antenna was varied between 1 and 4 meters. The peripherals were placed on the table in accordance with ANSI C63.10-2013. Cables were varied in position to produce maximum emissions. Both the horizontal and vertical field components were measured.

5.1.3 Test Data

The EUT RC Drone complied with the FCC Part 15.249 Field strength of the fundamental signal and Spurious Emissions requirements.

Table 5~7 Provides the test results for Field strength of the fundamental signal and Spurious Emissions.

Note: Only the worst case data (the EUT is place in X axis) were recorded in this test report.

5.1.4 Areas of Concern

None.

The plots of duty cycle:

Note: The duty cycle is simply the on-time divided by the period:

The duration of one cycle = 3.82ms

Effective period of the cycle = 392μs = 0.392ms

Duty cycle = 0.392ms / 3.82ms = 0.1026

Therefore, the averaging factor is found by $20 \log_{10} 0.1026 = -19.78 \text{ dB}$

Table 5: Field strength of the fundamental signal

Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic

equation with a sample calculation is as follows:

Final Test Level = Receiver Reading - Correct Factor

Correct Factor = Preamplifier Factor – Antenna Factor – Cable Factor

- 2) Scan from 9KHz to 26.5GHz, The disturbance above 18GHz and below 30MHz was very low, and the above harmonics were the highest point could be found when testing, so only the above harmonics had been displayed. The amplitude of spurious emissions from the radiator which are attenuated more than 20dB below the limit need not be reported

5.2 Band Edge Measurement (Radiated)

Radiated band edge measurements at 2390MHz and 2483MHz were made with the unit transmitting in the low end of the channel range and the high end closest to the restricted bands respectively. The emissions were made on the 966 Semi-Chamber. Use (resolution bandwidth (RBW) = 1 MHz, video bandwidth (VBW) = 1 MHz for peak levels and RBW = 1 MHz and VBW = 10 Hz for average levels).

5.2.1 Test Data

The EUT RC Drone complied with the FCC Part 15.249 Radiated band edge emissions requirements.

Table 8 provides the test results for Radiated band edge emissions.

5.2.2 Areas of Concern

None.

Table 8: Band Edge Measurements (Radiated)

Test Mode: Tx-2410MHz

Antenna Polarity: Horizontal

Frequency (MHz)	Peak level (dBuv/m)	Peak Limit (dBuv/m)	Duty cycle factor (dB)	AV level (dBuv/m)	AV Limit (dBuv/m)	Conclusion
2390.000	50.04	74	19.78	30.26	54	Pass

Antenna Polarity: Vertical

Frequency (MHz)	Peak level (dBuv/m)	Peak Limit (dBuv/m)	Duty cycle factor (dB)	AV level (dBuv/m)	AV Limit (dBuv/m)	Conclusion
2390.000	48.85	74	19.78	29.07	54	Pass

Test Mode: Tx-2478MHz

Antenna Polarity: Horizontal

Frequency (MHz)	Peak level (dBuv/m)	Peak Limit (dBuv/m)	Duty cycle factor (dB)	AV level (dBuv/m)	AV Limit (dBuv/m)	Conclusion
2483.500	63.30	74	19.78	43.52	54	Pass

Antenna Polarity: Vertical

Frequency (MHz)	Peak level (dBuv/m)	Peak Limit (dBuv/m)	Duty cycle factor (dB)	AV level (dBuv/m)	Limit (dBuv/m)	Conclusion
2483.500	59.77	74	19.78	39.99	54	Pass

5.3 20dB Bandwidth

20dB bandwidth was performed by coupling the output of the EUT to the input of a spectrum analyzer.

5.3.1 Limit

Within 2400-2483.5MHz.

5.3.2 Test Procedure

The transmitter output was connected to a spectrum analyzer, The bandwidth of the fundamental frequency was measured by spectrum analyzer with 30kHz RBW and 100KHz VBW. The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 20dB.

5.3.3 Test Data

Table 9 provides the test results for 20dB bandwidth.

5.3.4 Areas of Concern

None.

Table 9: 20dB Bandwidth Results

EUT: RC Drone		
M/N: X902		
Test date: 2016-04-06	Pressure: 99.54 ± 1.0 kPa	Humidity: 57 ± 3.0 %
Tested by: Ad Gan	Test site: RF site	Temperature: 25.6 ± 0.6 °C

Test Mode	Frequency (MHz)	20dB bandwidth (MHz)	Limit (MHz)
Tx	2410	1.074	Within 2400-2483.5MHz
	2444	1.085	Within 2400-2483.5MHz
	2478	1.118	Within 2400-2483.5MHz
Conclusion: Pass			

Test Mode: Tx-2410MHz

Test Mode: Tx-2444MHz

Test Mode: Tx-2478MHz

5.4 AC Powerline Conducted Emissions: (FCC Part §15.207)

According to Paragraph (c) of FCC Part 15 section 15.207, Tests to demonstrate compliance with the conducted limits are not required for devices which only employ battery power for operation and which do not operate from the AC power lines or contain provisions for operation while connected to the AC power lines.
