

2.1055 FREQUENCY STABILITY

§2.1055 Measurements required: Frequency stability.

(a) The frequency stability shall be measured with variation of ambient temperature as follows:

- ☐ (1) From -30° to $+50^{\circ}$ centigrade for all equipment except that specified in paragraphs (a) (2) and (3) of this section.
- ☐ (2) From -20° to $+50^{\circ}$ centigrade for equipment to be licensed for use in the Maritime Services under part 80 of this chapter, except for Class A, B, and S Emergency Position Indicating Radiobeacons (EPIRBs), and equipment to be licensed for use above 952 MHz at operational fixed stations in all services, stations in the Local Television Transmission Service and Point-to-Point Microwave Radio Service under part 21 of this chapter, equipment licensed for use aboard aircraft in the Aviation Services under part 87 of this chapter, and equipment authorized for use in the Family Radio Service under part 95 of this chapter.
- ☐ (3) From 0° to $+50^{\circ}$ centigrade for equipment to be licensed for use in the Radio Broadcast Services under part 73 of this chapter.

(b) Frequency measurements shall be made at the extremes of the specified temperature range and at intervals of not more than 10° centigrade through the range. A period of time sufficient to stabilize all of the components of the oscillator circuit at each temperature level shall be allowed prior to frequency measurement. The short term transient effects on the frequency of the transmitter due to keying (except for broadcast transmitters) and any heating element cycling normally occurring at each ambient temperature level also shall be shown. Only the portion or portions of the transmitter containing the frequency determining and stabilizing circuitry need be subjected to the temperature variation test.

- ☐ (c) In addition to all other requirements of this section, the following information is required for equipment incorporating heater type crystal oscillators to be used in mobile stations, for which type acceptance is first requested after March 25, 1974, except for battery powered, hand carried, portable equipment having less than 3 watts mean output power.

(1) Measurement data showing variation in transmitter output frequency from a cold start and the elapsed time necessary for the frequency to stabilize within the applicable tolerance. Tests shall be made after temperature stabilization at each of the ambient temperature levels; the lower temperature limit, 0° centigrade and $+30^{\circ}$ centigrade with no primary power applied.

(2) Beginning at each temperature level specified in paragraph (c)(1) of this section, the frequency shall be measured within one minute after application of primary power to the transmitter and at intervals of no more than one minute thereafter until ten minutes have elapsed or until sufficient measurements are obtained to indicate clearly that the frequency has stabilized within the applicable tolerance, whichever time period is greater. During each test, the ambient temperature shall not be allowed to rise more than 10° centigrade above the respective beginning ambient temperature level.

(3) The elapsed time necessary for the frequency to stabilize within the applicable tolerance from each beginning ambient temperature level as determined from the tests specified in this paragraph shall be specified in the instruction book for the transmitter furnished to the user.

(4) When it is impracticable to subject the complete transmitter to this test because of its physical dimensions or power rating, only its frequency determining and stabilizing portions need be tested.

FREQUENCY STABILITY

(d) The frequency stability shall be measured with variation of primary supply voltage as follows:

(1) Vary primary supply voltage from 85 to 115 percent of the nominal value for other than hand carried battery equipment.

(2) For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

(3) The supply voltage shall be measured at the input to the cable normally provided with the equipment, or at the power supply terminals if cables are not normally provided. Effects on frequency of transmitter keying (except for broadcast transmitters) and any heating element cycling at the nominal supply voltage and at each extreme also shall be shown.

(e) When deemed necessary, the Commission may require tests of frequency stability under conditions in addition to those specifically set out in paragraphs (a), (b), (c), and (d) of this section. (For example measurements showing the effect of proximity to large metal objects, or of various types of antennas, may be required for portable equipment.)

90.213 FREQUENCY STABILITY

§90.213 Frequency stability.

(a) Unless noted elsewhere, transmitters used in the services governed by this part must have a minimum frequency stability as specified in the following table.

(b) For the purpose of determining the frequency stability limits, the power of a transmitter is considered to be the maximum rated output power as specified by the manufacturer.

Applies to EUT	Frequency range (MHz)	Fixed and base stations (ppm)	Mobile stations > 2 watts output power (ppm)	Mobile stations ≤ 2 watts output power (ppm)
☒	421-512	^{7 11 14} 0.5 / 1.5 / 2.5 / 5	⁸ 1 / 2.5 / 5	⁸ 1 / 2.5 / 5

FREQUENCY STABILITY

☒ ⁷In the 421-512 MHz band, fixed and base stations with a 12.5 kHz channel bandwidth must have a frequency stability of 1.5 ppm. Fixed and base stations with a 6.25 kHz channel bandwidth must have a frequency stability of 0.5 ppm.

☐ ⁸In the 421-512 MHz band, mobile stations designed to operate with a 12.5 kHz channel bandwidth must have a frequency stability of 2.5 ppm. Mobile stations designed to operate with a 6.25 kHz channel bandwidth must have a frequency stability of 1.0 ppm.

☐ ¹¹Paging transmitters operating on paging-only frequencies must operate with frequency stability of 5 ppm in the 150-174 MHz band and 2.5 ppm in the 421-512 MHz band.

☐ ¹⁴Control stations may operate with the frequency tolerance specified for associated mobile frequencies.

§90.241 Radio call box operations.

☐ (c) Frequencies in the 450-470 MHz band which are designated as available for assignment to central control stations and radio call box installations in §90.20(c) or §90.20(d)(58) may be assigned in the Public Safety Pool for highway call box systems subject to the following requirements:

(2) Maximum transmitter power for call boxes will be either 2.5 watts input to the final amplifier stage or one watt output. The central control station shall not exceed 25 watts effective radiated power (ERP).

(11) Call box transmitter frequency tolerance shall be 0.001 percent.

FREQUENCY STABILITY

Test Procedure: ANSI C63.26 S 5.6.3

5.6.3 Procedure for frequency stability testing

Frequency stability is a measure of the frequency drift due to temperature and supply voltage variations, with reference to the frequency measured at +20 °C and rated supply voltage.

The operating carrier frequency shall be set up in accordance with the manufacturer's published operation and instruction manual prior to the commencement of these tests. No adjustment of any frequency determining circuit element shall be made subsequent to this initial set-up. Frequency stability is tested:

- a) At 10 °C intervals of temperatures between –30 °C and +50 °C at the manufacturer's rated supply voltage, and
- b) At +20 °C temperature and $\pm 15\%$ supply voltage variations. If a product is specified to operate over a range of input voltage then the –15% variation is applied to the lowermost voltage and the +15% is applied to the uppermost voltage.

During the test all necessary settings, adjustments and control of the EUT have to be performed without disturbing the test environment, i.e., without opening the environmental chamber. The frequency stabilities can be maintained to a lesser temperature range provided that the transmitter is automatically inhibited from operating outside the lesser temperature range. For handheld equipment that is only capable of operating from internal batteries and the supply voltage cannot be varied, the frequency stability tests shall be performed at the nominal battery voltage and the battery end point voltage specified by the manufacturer. An external supply voltage can be used and set at the internal battery nominal voltage, and again at the battery operating end point voltage which shall be specified by the equipment manufacturer.

If an unmodulated carrier is not available, the mean frequency of a modulated carrier can be obtained by using a frequency counter with gating time set to an appropriately large multiple of bit periods (gating time depending on the required accuracy). Full details on the choice of values shall be included in the test report.

Test Setup Block Diagram:

KDB 935210 S. 4.8 FREQUENCY STABILITY

Section 90.219(e)(4)(i) requires that a signal being retransmitted by an amplifier, repeater, or industrial booster meets the frequency stability requirements of Section 90.213. However, this requirement presumes that the EUT processes an input signal in ways that can influence the output signal frequency/frequencies; however, most signal boosters do not incorporate an oscillator). If the amplifier, booster, or repeater does not alter the input signal in any way, then a frequency stability test may not be required.

When performing frequency stability measurements on these types of devices, the instability associated with the EUT must be isolated from any frequency instability associated with the measurement instrumentation. One method for realizing such isolation is to connect the reference clock input of the signal generator to the reference output of the frequency counter, to confirm that any frequency instability is associated with the EUT, and is not due to differences between the reference oscillators internal to the measurement instrumentation.

STATEMENT OF MEASUREMENT UNCERTAINTY

The data and results referenced in this document are true and accurate. The measurement uncertainty was calculated for all measurements listed in this test report according To CISPR 16-4 or EN TR 100-028 Specification for radio disturbance and immunity measuring apparatus and methods – Part 4: “Uncertainty in EMC Measurements” and is documented in the Timco Engineering, Inc. quality system according to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer has the sole responsibility of continued compliance of the device.

Hereafter the best measurement capability for Timco Engineering, Inc. is reported:

11K3F3E (Narrowband Analog FM Voice)

Input Signals

16K0F3E (Wideband Analog FM Voice)

Date: 30.JAN.2019 14:23:14

EMISSION MASK & IVO

406.1125 MHz, Uplink, 25k FM, At AGC

Date: 27.JUL.2020 17:40:49

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, 25k FM, At AGC +3 dB

Date: 27.JUL.2020 17:41:32

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, 12.5k FM, OBW

Date: 27.JUL.2020 17:29:43

Note: Occupied Bandwidth (99%) for this emission was taken separately, due to measurement setup being incompatible with the setup used in Emission Mask compliance.

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, 12.5k FM, At AGC

Date: 27.JUL.2020 17:28:31

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, 12.5k FM, At AGC +3 dB

Date: 27.JUL.2020 17:27:34

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, C4FM, At AGC

Date: 27.JUL.2020 17:37:59

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, C4FM, At AGC +3 dB

Date: 27.JUL.2020 17:38:59

Comparison to Input: Complies with Standards

EMISSION MASK & IVO**406.1125 MHz, Uplink, H-CPM, OBW**

Date: 27.JUL.2020 17:31:41

Note: Occupied Bandwidth (99%) for this emission was taken separately, due to measurement setup being incompatible with the setup used in Emission Mask compliance.

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, H-CPM, AT AGC

Date: 27.JUL.2020 17:36:52

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

406.1125 MHz, Uplink, H-CPM, AT AGC +3 DB

Date: 27.JUL.2020 17:35:59

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, 25k FM, At AGC

Date: 27.JUL.2020 11:23:18

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, 25k FM, At AGC +3 dB

Date: 27.JUL.2020 11:24:07

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, 12.5k FM, At AGC

Date: 24.JUL.2020 18:41:05

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, 12.5k FM, At AGC +3 dB

Date: 24.JUL.2020 18:42:24

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, C4FM, At AGC

Date: 24.JUL.2020 18:43:31

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, C4FM, At AGC +3 dB

Date: 24.JUL.2020 18:44:18

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

450.0125 MHz, Uplink, H-CPM, AT AGC

Date: 24.JUL.2020 18:46:07

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, 25k FM, At AGC

Date: 27.JUL.2020 13:05:22

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, 25k FM, At AGC +3 dB

Date: 27.JUL.2020 13:05:58

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, 12.5k FM, At AGC

Date: 27.JUL.2020 12:56:26

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, C4FM, At AGC

Date: 27.JUL.2020 13:01:12

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, C4FM, At AGC +3 dB

Date: 27.JUL.2020 13:01:36

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, H-CPM, AT AGC

Date: 27.JUL.2020 13:00:31

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

469.9875 MHz, Downlink, H-CPM, AT AGC +3 DB

Date: 27.JUL.2020 12:59:52

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, 25k FM, At AGC

Date: 27.JUL.2020 19:04:30

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, 25k FM, At AGC +3 dB

Date: 27.JUL.2020 19:05:23

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, 12.5k FM, At AGC

Date: 27.JUL.2020 18:45:40

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, 12.5k FM, At AGC +3 dB

Date: 27.JUL.2020 18:46:32

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, C4FM, At AGC

Date: 27.JUL.2020 18:57:51

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, C4FM, At AGC +3 dB

Date: 27.JUL.2020 18:58:46

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, H-CPM, AT AGC

Date: 27.JUL.2020 18:59:32

Comparison to Input: Complies with Standards

EMISSION MASK & IVO

511.9875 MHz, Downlink, H-CPM, AT AGC +3 DB

Date: 27.JUL.2020 19:00:06

Comparison to Input: Complies with Standards

KDB 935210 4.7.2 INTERMODULATION
