Equipment Under Test (EUT)

Key operating with Bluetooth 4.0 (BLE)

FCC ID: 2AI5J-CONNECT

IC: 21724-CONNECT

Type / Model: CLIQ / YQ(G)B4xx(EX)

Serial no: -

Y can be N, T or X

(G) optional

xx can be 00...99

(EX) used for ATEX/EX approved products

The difference between the models is the basic operation firmware. The BLE firmware is the same with all models. Therefore, results in this report are representative for all the variants.

Description of the EUT

The EUT is a key with electronic properties and it uses Bluetooth Low Energy communication for delivering different key parameters to grant access rights. The lock does not contain any power source. The energy is distributed to the lock through the key contacts.

Classification of the device

Fixed device	☐
Mobile Device (Human body distance > 20cm)	☐
Portable Device (Human body distance < 20cm)	☒

Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing

Ratings and declarations

Operating Frequency Range (OFR): 2402 – 2480 MHz

Channels: 40

Channel separation: 2 MHz

99% Channel bandwidth: 1.099855282 MHz

Peak conducted output power: -11.35 dBm

Transmission technique: DSSS

Modulation: GFSK

Integral Antenna gain: 1 dBi

Part 15.203 Requirement: Internal antenna is not changeable by user. Product has no external antenna port.

Power Supply

The EUT has an internal 3.0V battery (CR2450).

Mechanical Size of the EUT

Height: 14 mm	Width:30 mm	Length: 88 mm
---------------	-------------	---------------

Samples

Two samples were used in the testing. Normal commercial sample with integral antenna for radiated emissions and a sample with integral antenna removed and replaced with 50Ω coaxial cable and SMA-connector for conducted RF tests. During the tests the EUT was set into continuous transmit and was set to the channel under test. Normal modulation and maximum transmit power was used in all tests. No modifications were done during the testing.

Disclaimer

This document is issued by the Company under its General Conditions of service accessible at http://www.sgs.com/terms_and_conditions.htm. attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

Any holder of this document is advised that information contained hereon reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only. This document cannot be reproduced except in full, without prior approval of the Company.

SUMMARY OF TESTING

Test Specification	Description of Test	Result
§15.247(b)(3) / RSS-247 5.4(4)	Maximum Peak Conducted Output Power	PASS
§15.247(a)(2) / RSS-247 5.2(1)	6 dB Bandwidth	PASS
§15.247(e) / RSS-247 5.2(2)	Power Spectral Density	PASS
RSS-GEN 6.6	99% Occupied Bandwidth	PASS
§15.247(d) / RSS-247 5.5	100 kHz Bandwidth of Frequency Band Edges and Conducted Spurious Emissions	PASS
§15.209(a), §15.247(d) / RSS-247 5.5	Radiated Emissions Within The Restricted Bands	PASS

EUT Test Conditions During Testing

The EUT was in continuous transmit mode during all the tests. The hopping was stopped and the EUT was configured into the wanted channel. Normal modulation and duty cycle was applied in all the tests. Tests were done in three orthogonal positions X, Y, Z.

Following channels were used during the tests when the hopping was stopped:

Channel Low (Ch 0) = 2402 MHz

Channel Mid (Ch 19) = 2440 MHz

Channel High (Ch 39) = 2480 MHz

Test Facility

Maximum Peak Conducted Output Power**TEST RESULTS****Maximum Peak Conducted Output Power**

Standard: ANSI C63.10 (2013)
Tested by: NKO
Date: 4.12.2015
Temperature: 21 °C
Humidity: 35 %
Measurement uncertainty $\pm 2.87\text{dB}$ Level of confidence 95 % (k = 2)

FCC Rule: 15.247(b)(3)
RSS-247 5.4(4)

For systems using digital modulation in the 2400-2483.5 MHz bands the limit is 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power.

Results:

Channel	Conducted Power [dBm]	Limit [dBm]	Margin [dBm]	Result
Low	-11.47	30	41.47	PASS
Mid	-11.35	30	41.35	PASS
High	-11.74	30	41.74	PASS

Maximum Peak Conducted Output Power

Figure 3. Channel High.

Transmitter Radiated Spurious Emissions 0.030 – 1000 MHz

Standard:	ANSI C63.10	(2013)
Tested by:	NKO	
Date:	27.11 - 3.12.2015	
	and 15.2.2017	
Humidity:	34 – 38 %	
Temperature:	20 – 22 °C	
Measurement uncertainty	± 4.51 dB	Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a), 15.33**RSS-247 5.5**

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables). The QuasiPeak value is the measured value corrected with the correction factor.

Transmitter Radiated Spurious Emissions

Measured Peak Values In The Frequency Range 0.030 MHz - 30 MHz.

No final measurements were made due to the low emissions level.

Measured Peak Values In The Frequency Range 30 MHz - 1000 MHz.

FCC Part 15 Class B Spurious Emission 30-1000MHz 3m

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Standard: ANSI C63.10 (2013)
Tested by: NKO
Date: 4.12.2015
Humidity: 35 %
Temperature: 21 °C
Measurement uncertainty ± 2.87 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a) RSS-247 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).

Table 24. Band edge attenuation.

Band Edge Attenuation	
Lower Band Edge	Upper Band Edge
-46.15 dBc	-54.62 dBc
Limit: -20dBc	

Table 25. Conducted spurious emissions.

Conducted Spurious Emissions					
Channel	Frequency [MHz]	Measured Attenuation [dBm]	EIRP Limit [dBc]	Margin [dB]	Result
Low	7205.37	-38.61	-20.0	7.27	PASS
Low	6909.04	-37.19	-20.0	5.85	PASS
Mid	9759.04	-35.56	-20.0	4.22	PASS
High	9919.03	-38.41	-20.0	7.07	PASS
