This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specific mention, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification

## RELEASE CONTROL RECORD

| ISSUE NO.    | REASON FOR CHANGE | DATE ISSUED   |
|--------------|-------------------|---------------|
| FV160714N028 | Original release  | Aug. 03, 2016 |

## 1 SUMMARY OF TEST RESULTS

The EUT has been tested according to the following specifications:

| APPLIED STANDARD: FCC Part 15, Subpart B |                                          |        |                                                                        |
|------------------------------------------|------------------------------------------|--------|------------------------------------------------------------------------|
| Standard Section                         | Test Item                                | Result | Remark                                                                 |
| FCC Part 15,<br>Subpart B, Class B       | Conducted test                           | PASS   | Meets limits minimum<br>passing margin is<br>-10.99 dB at 0.44240 MHz  |
|                                          | Radiated Emission<br>Test (30MHz ~ 1GHz) | PASS   | Meets limits minimum<br>passing margin is<br>- 3.62 dB at 169.680 MHz  |
|                                          | Radiated Emission<br>Test (Above 1GHz)   | PASS   | Meets limits minimum<br>passing margin is<br>- 10.40 dB at 5120.00 MHz |

### 1.1 MEASUREMENT UNCERTAINTY

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

| MEASUREMENT             | FREQUENCY       | UNCERTAINTY  |
|-------------------------|-----------------|--------------|
| Conducted emission test | 0.15MHz ~ 30MHz | +/- 2.70 dB  |
| Radiated emissions      | 30MHz ~ 1GHz    | + /- 4.08 dB |
|                         | Above 1GHz      | +/-4.58 dB   |

## 2 GENERAL INFORMATION

### 2.1 GENERAL DESCRIPTION OF EUT

|                                            |                                                        |
|--------------------------------------------|--------------------------------------------------------|
| <b>PRODUCT</b>                             | Action Camera                                          |
| <b>MODEL NO.</b>                           | SJ4000                                                 |
| <b>ADDITIONAL MODEL</b>                    | PAC1908-DG                                             |
| <b>FCC ID:</b>                             | 2AI8H-SJ4000                                           |
| <b>ADDITIONAL MODE</b>                     | N/A                                                    |
| <b>POWER SUPPLY</b>                        | DC 3.7V from Li-ion battery or<br>DC 5V from Host Unit |
| <b>CABLE SUPPLIED</b>                      | USB Cable: Shielded Detachable 0.3m with one core.     |
| <b>THE HIGHEST OPERATING<br/>FREQUENCY</b> | 130MHz                                                 |

**NOTE:**

1. For the test results, the EUT had been tested with all conditions. But only the worst case was shown in test report.
2. For a more detailed features description, please refer to the manufacturer's specifications or the User's Manual.
3. Please refer to the EUT photo document (Reference No.: 160714N028) for detailed product photo.
4. Additional model PAC1908-DG is identical with the test model SJ4000 except the trade name and model number for marketing purpose.

## 2.2 DESCRIPTION OF TEST MODES

The EUT were tested under the following modes, the final worst mode was marked in boldface and recorded in this report.

### ◆ For Conducted Emission Test

| Test Mode                            |
|--------------------------------------|
| <b>Data communication + Charging</b> |

### ◆ FOR RADIATED EMISSIONS TEST:

| Test Mode                            |
|--------------------------------------|
| Video Recording                      |
| Video Playing                        |
| <b>Data communication + Charging</b> |

## 2.3 DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an dependent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| NO. | PRODUCT  | BRAND  | MODEL NO.         | SERIAL NO.          | FCC ID |
|-----|----------|--------|-------------------|---------------------|--------|
| 1   | Notebook | DELL   | E6420             | 9H12FS1             | N/A    |
| 2   | Notebook | DELL   | Inspiron 14 N4030 | 3J9WVP1             | N/A    |
| 3   | Printer  | HP     | hp LaserJet 1300  | CNSJF75989          | N/A    |
| 4   | Printer  | Lenovo | LJ2200L           | LP02857415 48001408 | N/A    |
| 5   | Mouse    | DELL   | MOC5UO            | H0K00K92            | N/A    |
| 6   | TF Card  | maxell | MX-MSDC4-4GB (EN) | 944903803891        | N/A    |

| NO. | DESCRIPTION OF THE ABOVE SUPPORT UNITS                                      |
|-----|-----------------------------------------------------------------------------|
| 1   | AC Line: Unshielded, Detachable 1.0m, DC Line: Unshielded, Detachable 2.0m  |
| 2   | AC Line: Unshielded, Detachable 0.8m, DC Line: Unshielded, Detachable 1.8m  |
| 3   | AC Line: Unshielded, Detachable 1.8m, USB Line: Unshielded, Detachable 1.8m |
| 4   | AC Line: Unshielded, Detachable 1.5m, USB Line: Unshielded, Detachable 1.5m |
| 5   | USB Line: Unshielded, Detachable 1.8m                                       |
| 6   | N/A                                                                         |

### 3 EMISSION TEST

#### 3.1 CONDUCTED EMISSION MEASUREMENT

##### 3.1.1 LIMITS OF CONDUCTED EMISSION MEASUREMENT

TEST STANDARD: FCC Part 15, Subpart B (Section: 15.107)

| FREQUENCY (MHz) | Class A (dBuV) |         | Class B (dBuV) |         |
|-----------------|----------------|---------|----------------|---------|
|                 | Quasi-peak     | Average | Quasi-peak     | Average |
| 0.15 - 0.5      | 79             | 66      | 66 - 56        | 56 - 46 |
| 0.50 - 5.0      | 73             | 60      | 56             | 46      |
| 5.0 - 30.0      | 73             | 60      | 60             | 50      |

- NOTES:**
- (1) The lower limit shall apply at the transition frequencies.
  - (2) The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50 MHz.
  - (3) All emanations from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

##### 3.1.2 TEST INSTRUMENTS

| Equipment                | Manufacturer  | Model No.          | Serial No.  | Last Cal.  | Next Cal.  |
|--------------------------|---------------|--------------------|-------------|------------|------------|
| EMI Test Receiver        | Rohde&Schwarz | ESR7               | 101588      | Jan. 22,16 | Jan. 21,17 |
| Artificial Mains Network | Rohde&Schwarz | ENV216             | 101173      | Mar. 04,16 | Mar. 03,17 |
| Artificial Mains Network | Rohde&Schwarz | ESH3-Z5            | 100317      | Apr. 05,16 | Apr. 04,17 |
| Voltage probe            | SCHWARZBECK   | TK 9421            | TK 9421-176 | Jan. 08,16 | Jan. 07,17 |
| Test software            | ADT           | ADT_Con<br>_v7.3.7 | N/A         | N/A        | N/A        |

- NOTE:**
1. The calibration interval of the above test instruments is 12 months and the calibrations are traceable to CEPREI/CHINA, GRGT/CHINA and NIM/CHINA.
  2. The test was performed in shielding room 553.

### 3.1.3 TEST PROCEDURE

The basic test procedure was in accordance with ANSI C63.4:2014 (section 7).

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150 kHz to 30 MHz was searched. Emission levels under (Limit – 20dB) were not recorded.

**NOTE:**

1. Q.P. and AV. are abbreviations of quasi-peak and average individually.
2. "-": The Quasi-peak reading value also meets average limit and measurement with the average detector is unnecessary.
3. Margin value = Emission level - Limit value
4. Correction factor = Insertion loss + Cable loss
5. Emission Level = Correction Factor + Reading Value

### 3.1.4 DEVIATION FROM TEST STANDARD

No deviation.

### 3.1.5 TEST SETUP

**Note:** 1.Support units were connected to second LISN.  
2.Both of LISNs (AMN) are 80cm from EUT and at least 80cm from other units and other metal planes support units.

### 3.1.6 EUT OPERATING CONDITIONS

- Turned on the power of all equipment.
- EUT was operated according to the type description in manufacturer's specifications or the User's Manual.

### 3.1.7 TEST RESULTS

|                                 |                               |                      |          |
|---------------------------------|-------------------------------|----------------------|----------|

## 3.2 RADIATED EMISSION MEASUREMENT

### 3.2.1 LIMITS OF RADIATED EMISSION MEASUREMENT

**TEST STANDARD: FCC Part 15, Subpart B (Section: 15.109)**

Emissions radiated outside of the specified bands, shall be according to the general radiated limits as following:

| Radiated Emissions Limits at 10 meters (dBμV/m) |                            |                             |                   |                   |
|-------------------------------------------------|----------------------------|-----------------------------|-------------------|-------------------|
| Frequencies (MHz)                               | FCC 15B/ ICES-003, Class A | FCC 15B / ICES-003, Class B | CISPR 22, Class A | CISPR 22, Class B |
| 30-88                                           | 39                         | 29.5                        | 40                | 30                |
| 88-216                                          | 43.5                       | 33.1                        |                   |                   |
| 216-230                                         | 46.4                       | 35.6                        |                   |                   |
| 230-960                                         |                            |                             | 47                | 37                |
| 960-1000                                        | 49.5                       | 43.5                        |                   |                   |
| 1000-3000                                       | Avg: 49.5                  | Avg: 43.5                   | Not defined       | Not defined       |
| Above 3000                                      | Peak: 69.5                 | Peak: 63.5                  | Not defined       | Not defined       |

| Radiated Emissions Limits at 3 meters (dBµV/m) |                             |                             |                     |                     |
|------------------------------------------------|-----------------------------|-----------------------------|---------------------|---------------------|
| Frequencies (MHz)                              | FCC 15B / ICES-003, Class A | FCC 15B / ICES-003, Class B | CISPR 22, Class A   | CISPR 22, Class B   |

## FREQUENCY RANGE OF RADIATED MEASUREMENT (For unintentional radiators)

| Highest frequency generated or Upper frequency of measurement used in the device or on which the device operates or tunes (MHz) | Range (MHz)                                                         |
|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|
| Below 1.705                                                                                                                     | 30                                                                  |
| 1.705 – 108                                                                                                                     | 1000                                                                |
| 108 – 500                                                                                                                       | 2000                                                                |
| 500 – 1000                                                                                                                      | 5000                                                                |
| Above 1000                                                                                                                      | 5th harmonic of the highest frequency or 40 GHz, whichever is lower |

Note: (1) The lower limit shall apply at the transition frequencies.

(2) Emission level (dBuV/m) = 20 log Emission level (uV/m).

(3) All emanation from a class A/B digital device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified above.

- NOTES:** 1. The test was performed in 10m Chamber.  
 2. The calibration interval of the above test instruments is 12 months. And the calibrations are traceable to CEPREI/CHINA, GREGT/CHINA and NIM/CHINA.  
 3. The FCC Site Registration No. is 502831.

### 3.2.3 TEST PROCEDURE

The basic test procedure was in accordance with ANSI C63.4:2014 (section 12).

#### <Frequency Range below 1GHz>

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 10 meter semi-anechoic chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 10 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from 1 meter to 4 meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to quasi-peak detect function and specified bandwidth with maximum hold mode when the test frequency is below 1GHz.

#### NOTE:

1. The resolution bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection (QP) at frequency below 1GHz.
2.  $\text{Emission level(dBuV/m)} = \text{Raw Value(dBuV)} + \text{Correction Factor(dB/m)}$
3.  $\text{Correction Factor(dB/m)} = \text{Antenna Factor (dB/m)} + \text{Cable Factor (dB)}$  (if the raw value not contains the amplifier)
4.  $\text{Correction Factor (dB/m)} = \text{Antenna Factor (dB/m)} + \text{Cable Factor (dB)} - \text{Amplifier Gain(dB)}$  (if the raw value contains the amplifier)
5.  $\text{Margin value} = \text{Emission level} - \text{Limit value}$

### <Frequency Range above 1GHz>

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 10 meter chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna can be varied from one meter-to four meters, the height of adjustment depends on the EUT height and the antenna 3dB beamwidth both, to detect the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement. The bore sight should be used during the test above 1GHz.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test receiver/spectrum was set to peak and average detect function and specified bandwidth with maximum hold mode when the test frequency is above 1 GHz.

#### NOTE:

1. The resolution bandwidth is 1MHz and video bandwidth of test receiver/spectrum analyzer is 3MHz for Peak detection at frequency above 1GHz. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz for Average detection (AV) at frequency above 1GHz.
2. For measurement of frequency above 1000 MHz, the EUT was set 3 meters away from the receiver antenna.
3.  $\text{Emission level(dBuV/m)} = \text{Raw Value(dBuV)} + \text{Correction Factor(dB/m)}$
4.  $\text{Correction Factor(dB/m)} = \text{Antenna Factor (dB/m)} + \text{Cable Factor (dB)}$  (if the raw value not contains the amplifier)
5.  $\text{Correction Factor (dB/m)} = \text{Antenna Factor (dB/m)} + \text{Cable Factor (dB)} - \text{Amplifier Gain(dB)}$  (if the raw value contains the amplifier).
6.  $\text{Margin value} = \text{Emission level} - \text{Limit value}$

### 3.2.4 DEVIATION FROM TEST STANDARD

No deviation.

### 3.2.5 TEST SETUP

<Frequency Range below 1GHz>

<Frequency Range above 1GHz>

\* : depends on the EUT height and the antenna 3dB beamwidth both, refer to section 7.3 of CISPR 16-2-3.

### 3.2.6 EUT OPERATING CONDITIONS

- Turn on the power supply of the EUT.
- EUT was operated according to the type description in manufacturer's specifications or the User's Manual.

### 3.2.7 TEST RESULTS

- REMARKS:**
1. Peak detector quick scan is showed on the graph and final quasi-peak detector data is measured corresponding to relevant limit and recorded in the data table.
  2. Negative sign (-) in the margin column signify levels below the limit.
  3. Frequency range scanned: 30MHz to 1000MHz.
  4. Only emissions significantly above equipment noise floor are reported.

| 6                                                   | 5120.00 AV  | 4.39                     | 39.21            | 43.60                   | 54.00          | -10.40      | 100                 | 210                  |

**REMARKS:** 1. Peak detector quick scan is showed on the graph and final quasi-peak detector data is measured corresponding to relevant limit and recorded in the data table.  
2. Negative sign (-) in the margin column signify levels below the limit.  
3. Frequency range scanned: 1GHz to 6GHz.  
4. Only emissions significantly above equipment noise floor are reported.

Test Report No.: FV160714N028

## 4 PHOTOGRAPHS OF THE TEST CONFIGURATION

Please refer to the attached file (Test Setup Photo).

Test Report No.: FV160714N028

## 5 APPENDIX A – MODIFICATIONS RECORDERS FOR ENGINEERING CHANGES TO THE EUT BY THE LAB

No any modifications were made to the EUT by the lab during the test.
