The image shows a custom-designed green PCB. At the top, there are labels for power and ground connections: +5V, GND, +5V, GND, 5V3, and VOL+. Below these, a central IC is mounted. To its left, there are several resistors and capacitors, including one labeled 100k. To its right, there are more components, including a 100k resistor and a 100nF capacitor. A white connector is located at the bottom center. A circular sticker with 'Q.C. PASSED' is on the left side. The board has several test points and is labeled with power and ground connections at the top.
