4. Operation and Monitoring of the EUT during Testing

4.1. Operating Modes

The EUT was tested in the following operating mode(s):

- Continuously transmitting with a modulated carrier at maximum power on the bottom, middle and top channels as required using the supported data rates/modulation types.

4.2. Configuration and Peripherals

The EUT was tested in the following configuration(s):

- Transmit tests: The EUT was placed into WLAN test mode using a laptop PC and running an ADB (Android Debug Bridge) application via USB. The customer supplied instructions to configure the EUT into test mode. Once in WLAN test mode, the test channels and modulation modes were set as required using command line text strings.
- For all tests, Aircraft Mode was selected on the EUT to disable unwanted transmissions from radios not under test.
- For conducted tests, the EUT was powered via a laboratory power supply and dummy battery through a 4-wire connection. Charging was disabled using a selection switch on the dummy battery.
- All supported modes and channel widths were initially investigated on one channel. The modes that produced the highest power and widest bandwidth for all bands were:
 - Highest power
 - 802.11a – 16QAM / 36 Mbps
 - 802.11n HT20 – 16QAM / 39 Mbps / MCS4
 - 802.11n HT40 – BPSK / 13.5 Mbps / MCS0
 - 802.11ac VHT80 – 64QAM / 263.3 Mbps / MCS6x1
 - Highest power spectral density
 - 802.11a – 16QAM / 36 Mbps
 - 802.11n HT20 – QPSK / 19.5 Mbps / MCS2
 - 802.11n HT40 – BPSK / 13.5 Mbps / MCS0
 - 802.11ac VHT80 – 64QAM / 263.3 Mbps / MCS6x1
 - Widest bandwidth
 - 802.11a – 16QAM / 36 Mbps
 - 802.11n HT20 – 16QAM / 39 Mbps / MCS4
 - 802.11n HT40 – 64QAM / 108 Mbps / MCS5
 - 802.11ac VHT80 – 64QAM / 263.3 Mbps / MCS6x1

Pre-scan results for all modes are archived on the Company server and available for inspection if required.

Configuration and Peripherals (continued)

- All supported modes and channel widths were initially investigated on one channel. The modes that produced the narrowest bandwidth for the 5725 to 5850 MHz band were:
 - Narrowest bandwidth
 - 802.11a – BPSK / 9 Mbps
 - 802.11n HT20 – BPSK / 13 Mbps / MCS8
 - 802.11n HT40 – BPSK / 27 Mbps / MCS8
 - 802.11ac VHT80 – BPSK / 29.3 Mbps / MCS0x1

Pre-scan results for all modes are archived on the Company server and available for inspection if required.

- For the tests in this report, Antenna 1 corresponds to the antenna identified by the manufacturer as Main WiFi Antenna (#5), Antenna 2 corresponds to the antenna identified by the manufacturer as Secondary WiFi Antenna (#3). Port 1 and Port 2 correspond to antenna 1 and antenna 2 respectively.
- RF cables and attenuators connecting the test equipment to the EUT were calibrated before use and the calibration data incorporated into the conducted measurement results.
- Transmitter spurious emissions were performed with the EUT transmitting with a data rate of 36 Mbps (802.11a). This was found to be the worst case modulation scheme with regards to emissions after preliminary investigations and, as this mode emits the highest transmit output power level, it was deemed to be the worst case.
- Radiated spurious emissions were performed with the EUT in the worst case position for radiated spurious emissions. Tests were performed with the EUT connected to its AC charger and USB cable. The AC charger was powered by 120 VAC 60 Hz. A pair of headphones were also connected to the EUT. An SDRAM card and USIM were fitted. There were no other ports to terminate.
- AC conducted tests were performed with all active ports terminated.
- The conducted sample with IMEI 357232070003098 was used for 26 dB emission bandwidth, minimum 6 dB bandwidth, duty cycle, maximum output power and power spectral density tests.
- The radiated sample with IMEI 357232070004146 was used for all other tests.

5. Measurements, Examinations and Derived Results

5.1. General Comments

Measurement uncertainties are evaluated in accordance with current best practice. Our reported expanded uncertainties are based on standard uncertainties, which are multiplied by an appropriate coverage factor to provide a statistical confidence level of approximately 95%. Please refer to *Section 6 Measurement Uncertainty* for details.

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

5.2. Test Results

5.2.1. Transmitter AC Conducted Spurious Emissions

Test Summary:

Test Engineer:	Matthew Galbraith	Test Dates:	23 May 2016 to 02 June 2016
Test Sample IMEI:	357232070004146		

FCC Reference:	Part 15.207
Test Method Used:	ANSI C63.10 Section 6.2

Environmental Conditions:

Temperature (°C):	24
Relative Humidity (%):	31 to 37

Note(s):

1. The EUT was connected to an AC charger via a USB cable. The AC charger was connected to 120 VAC 60 Hz single phase supply via a LISN.
2. In accordance with FCC KDB 174176 Q4, tests were also performed with a 240 VAC 60 Hz single phase supply as this was within the voltage range marked on the AC charger.
3. Pre-scans were performed and markers placed on the highest live and neutral measured levels. Final measurements were performed on the marker frequencies and the results entered into the tables below.
4. A pulse limiter was fitted between the LISN and the test receiver.

Note(s):

1. All configurations supported by the EUT were investigated on the one channel in accordance with KDB 789033 Section II.C.1. Emission Bandwidth (EBW) test procedure. The data rates that produced the widest bandwidth and therefore deemed worst case were:
 - 802.11a – 16QAM / 36 Mbps
 - 802.11n HT20 – 16QAM / 39 Mbps / MCS4
 - 802.11n HT40 – 64QAM / 108 Mbps / MCS5
 - 802.11ac VHT80 – 64QAM / 263.3 Mbps / MCS6x1
2. Final measurements were performed in each supported operating band using the above configurations on the bottom, middle and top or single channels.
3. Plots for all data rates are archived on the Company server and available for inspection upon request.
4. The signal analyser was connected to the RF port on the EUT using an RF switch, suitable attenuation and RF cables. An RF level offset was entered on the signal analyser to compensate for the loss of the switch, attenuators and RF cables.
5. For the power measurements in this report, the highest power output level was recorded when the EUT was configured as:
 - 802.11a – 16QAM / 36 Mbps
 - 802.11n HT20 – 16QAM / 39 Mbps / MCS4
 - 802.11n HT40 – BPSK / 13.5 Mbps / MCS0
 - 802.11ac VHT80 – 64QAM / 263.3 Mbps / MCS6x1

Emission bandwidth plots for 802.11n HT40 – BPSK / 13.5 Mbps / MCS0 configuration have been included as 'Reference plots' at the end of this section.
