2) English Manual (BAESLab)

 User Manual	AIDER CARE Introduction We believe that technology enables us to improve human well-being. Because the world never stops changing resulting in a non-stop change in our way of life and society. Nowadays, Thailand has turned towards aging society with more than 10 million of senior citizens which most of them are now facing with health problems; 58 percent of elderly has a tough movement and 41% struggles with hypertension. And since they are likely to stay at home alone all by themselves, causing difficulty for their descendants to take proper care of them as they are rarely together.	That's why BAESLab Company Limited to develop AIDER CARE. An innovative product to serve a family as a caregiver and assistant to reduce health risks. Lifestyle reporter via wearable device is like a personal doctor that will take care and report habitual routine of your loved ones. It can also detect even a slight change with artificial technology (AI) that learns personal routine and activity of a wearer. Area detection system will alert when spotted out of home radius which can be super helpful, especially, for a case of Alzheimer to protect a wearer from straggling, and will send alert to you at once when a wearer faces emergency to convey help just in time. We don't only design technologies but also develop innovation that enhances the quality of life	And provide more freedom for your loved ones.
---	--	---	--

Product Feature CLOUD ASSISTANT 24/7 access to user's backup database system which tracks and collects activity routine information such as walking, running or resting every 5 seconds and will be shown in activity graph. FLEXICARE With user-based design, AIDER CARE is suitable for seniors. Plus, the non complexity process makes it easy to use.	PUSH EMERGENCY Emergency alert button available in one click can send alert by calling or sending message to you to provide help in time. FALLS ALERT This innovation comes with Artificial Intelligence (AI) to learn and track personal activity routine. It knows every movement and will send alert immediately when detects any abnormal activity of its wearer such as an unlikely movement or falling. With this technology, it can be very helpful for a doctor to diagnose more accurately.	AREA DETECTION Protect your loved ones from getting lost via alert system which will send alert when a wearer is spotted out of the residence radius. Suitable for a senior who's home alone or has an Alzheimer disease. BLUETOOTH 4.0 AIDER CARE is connected via Bluetooth version 4.0 which will work even if a wearer doesn't use smartphone.	WATER RESISTANCE Water resistance at a level of IP65 prevents water from seeping into the product leaving a wearer no concern about taking it off from time to time as he or she is doing certain activity such as hand washing or going out on a rainy day. ULTRALOW POWER CONSUMPTION Equipped with Lithium Polymer Battery 100 mAh which allows an extra long life up to 7 days after single 2-3 hour charge.
