**Test report
On Behalf of
CPR GLOBAL TECH LTD
For
WATCHU
Model No.: WUCPR01, WUCPR02 , WUCPR03, WUCPR04

FCC ID: 2AJ29-WATCHUGPS1**

**Prepared for : CPR GLOBAL TECH LTD
York Chambers, York Street, Swansea, SA1 3LZ, United Kingdom**

**Prepared By : Laboratory of Shenzhen United Testing Technology Co., Ltd
Room 316-319, Block B, Honghualing Industrial Park of the Fifth Zone, Taoyuan
Street, Nanshan District, Shenzhen, Guangdong, China**

**Date of Test: November. 6, 2016 ~ November. 11, 2016
Date of Report: November. 11, 2016
Report Number: UNI1601006051-E**

TEST RESULT CERTIFICATION

Applicant's name : CPR GLOBAL TECH LTD

Address : York Chambers, York Street, Swansea, SA1 3LZ, United Kingdom

Manufacture's Name : Shenzhen OneMeter Sunshine Technology Co., Ltd

Address : 7F/B, Baoju Bldg, Baoneng Science and Technology Industrial
Park, No.1 Qingxiang Road, Longhua New Zone, Shenzhen
518001, China

Product description

Trade Mark: Watchu

Product name : WATCHU

Model and/or type reference : WUCPR01, WUCPR02 , WUCPR03, WUCPR04

Standards : FCC Part 22H and 24E

ANSI C63.10: 2013

1.2 TEST FACILITY

Test Firm : Dongguan Dongdian Testing Service Co., Ltd
 Certificated by FCC, Registration No.: 270092

Address : No.17 Zongbu road 2, Songshan Lake Sci&Tech Park, DongGuan
 City, Guangdong province,523808 China

1.3 MEASUREMENT UNCERTAINTY

Measurement Uncertainty	
Conducted Emission Expanded Uncertainty	= 2.23dB, k=2
Radiated emission expanded uncertainty(9kHz-30MHz)	= 3.08dB, k=2
Radiated emission expanded uncertainty(30MHz-1000MHz)	= 4.42dB, k=2
Radiated emission expanded uncertainty(Above 1GHz)	= 4.06dB, k=2

2. GENERAL INFORMATION

2.1 GENERAL DESCRIPTION OF EUT

Equipment	WATCHU
Model Name	WUCPR01
Serial No	WUCPR02 , WUCPR03, WUCPR04
Model Difference	All model's the function, software and electric circuit are the same, only with a product color and model named different. Test sample model: WUCPR01.
FCC ID	2AJ29-WATCHUGPS1
Antenna Type	Integrated Antenna
Antenna Gain	1 dBi
Operation Band:	GSM850, PCS1900
Operation frequency	GSM/GPRS 850: 824~849MHz GSM/GPRS 1900: 1850~1910MHz
Modulation Type	GMSK for GSM/GPRS
Power Source	N/A
Power Rating	DC 3.7V from battery or DC 5V from adapter

Equipment	WATCHU
Model Name	WUCPR01
Serial No	WUCPR02 , WUCPR03, WUCPR04
Model Difference	All model's the function, software and electric circuit are the same, only with a product color and model named different. Test sample model: WUCPR01.
FCC ID	2AJ29-WATCHUGPS1
Antenna Type	Integrated Antenna
Antenna Gain	1 dBi
Operation frequency	802.11b/g/n 20:2412~2462 MHz 802.11n 40: 2422~2452MHz
Number of Channels	802.11b/g/n20: 11CH 802.11n 40: 7CH
Modulation Type	CCK/OFDM/DBPSK/DAPSK
Power Source	N/A
Power Rating	DC 3.7V from battery or DC 5V from adapter

Note: This report only GSM test report, WIFI transmitters see the other test report.

2.1.1 Carrier Frequency of Channels

During all testing, EUT is in link mode with base station emulator at maximum power level in each test mode and channel as below:

Mode	Channel	Frequency(MHz)
GSM 850	128	824.2
	190	836.6
	251	848.8
PCS 1900	512	1850.2
	661	1880.0
	810	1909.8

2.2 DESCRIPTION OF TEST SETUP

Operation of EUT during conducted testing:

Operation of EUT during Radiation testing:

3. CONDUCTED EMISSIONS TEST

3.1 Conducted Power Line Emission Limit

For unintentional device, according to § 15.107(a) Line Conducted Emission Limits is as following

Frequency (MHz)	Maximum RF Line Voltage (dB μ V)			
	CLASS A		CLASS B	
	Q.P.	Ave.	Q.P.	Ave.
0.15 - 0.50	79	66	66-56*	56-46*
0.50 - 5.00	73	60	56	46
5.00 - 30.0	73	60	60	50

* Decreasing linearly with the logarithm of the frequency

For intentional device, according to §15.207(a) Line Conducted Emission Limit is same as above table.

3.2 Test Setup

3.3 Test Procedure

- 1, The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. The EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.10.
- 2, Support equipment, if needed, was placed as per ANSI C63.10.
- 3, All I/O cables were positioned to simulate typical actual usage as per ANSI C63.10.
- 4, If a EUT received DC power from the USB Port of Notebook PC, the PC's adapter received AC120V/60Hz power through a Line Impedance Stabilization Network (LISN) which supplied power source and was grounded to the ground plane.
- 5, All support equipments received AC power from a second LISN, if any.
- 6, The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum Analyzer / Receiver connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to Analyzer / Receiver and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the Analyzer / Receiver.
- 7, Analyzer / Receiver scanned from 150 KHz to 30MHz for emissions in each of the test modes.

3.4 Test Result

PASS

All the test modes completed for test.

Condition : FCC PART 15 B QP POL: NEUTRAL Temp:26 °C Hum:48 %

4 Conducted Output power

4.1 Test Limit

Cellular Telephone 850MHz	PCS 1900MHz
/	/

4.2 Test Procedure

- 1 The EUT's RF output port was connected to base station.
- 2 A call is set up by the SS according to the generic call set up procedure
- 3 Set EUT at maximum power level through base station by power level command
- 4 Measure the maximum output power of EUT at each frequency band and mode by base station.

4.3 Measurement Equipment Used

Same as Radiated Emission Measurement

4.4 Test Result

PASS

All the test modes completed for test.

GSM850 Mode			
Test Channel	Frequency (MHz)	Maximum Peak Conducted Output Power (dBm)	LIMIT dBm
128	824.2	32.72	/
190	836.6	32.84	/
251	848.8	32.79	/

661	1880	30.35	/
810	1909.8	30.28	/

5 Radiated Output power

5.1 Test Limit

This is the test for the maximum radiated power from the EUT. Rule Part 24.232(b) specifies, "Mobile/portable stations are limited to 2 watts e.i.r.p. Peak power" and 24.232(c) specifies that "Peak transmit power must be measured over any interval of continuous transmission using instrumentation calibrated in terms of an rms-equivalent voltage." Rule Part 22.913(a) specifies "Maximum ERP. The effective radiated power (ERP) of base transmitters and cellular repeaters must not exceed 500 Watts. The ERP of mobile transmitters and auxiliary test transmitters must not exceed 7 Watts."

GSM 850MHz	PCS 1900MHz
38.5dBm(ERP)	33dBm(EIRP)

5.2 Test Procedure

1. The EUT was placed on an non-conductive rotating platform with 0.8 meter height in an anechoic chamber. The radiated emission at the fundamental frequency was measured at 3 m with a test antenna and a spectrum analyzer with RBW= 3MHz,VBW= 3MHz and peak detector settings.
2. During the measurement, the EUT was enforced in maximum power and linked with a base station. The highest emission was recorded from analyzer power level (LVL) from the 360 degrees rotation of the turntable and the test antenna raised and lowered over a range from 1 to 4 meters in both horizontally and vertically polarized orientations
3. Effective Isotropic Radiated Power (EIRP) was measured by substitution method according to TIA/EIA-603-C. The EUT was replaced by dipole antenna (for frequency below 1GHz) or Horn antenna(for frequency above 1GHz) at same location with same polarize of receiver antenna and then a known power of each measure frequency from S.G. was applied into the dipole antenna or Horn antenna through a Tx cable, and then recorded the maximum Analyzer reading through raised and lowered the test antenna. The correction factor (in dB) = S.G. - Tx Cable loss + Substitution antenna gain -Substitution antenna Loss(only for Dipole antenna) - Analyzer reading. Then the EUT's EIRP was calculated with the correction factor, $EIRP = LVL + \text{Correction factor}$ and $ERP = EIRP - 2.15$

5.3 Measurement Equipment Used

Same as Radiated Emission Measurement

5.4 Test Result

Conclusion: PASS					
Mode	Channel	LVL (dBm)	Correction factor(dB)	ERP (dBm)	EIRP (dBm)

ERP=LVL + Correction factor -2.15					
EIRP=LVL+ Correction factor					

6 PEAK-TO- AVERAGE RATIO(PAR) OF TRANSMITTER

6.1 Test Limit

According to §24.232(d), Power measurements for transmissions by stations authorized under this section may be made either in accordance with a Commission-approved average power technique or in compliance with paragraph (e) of this section. In both instances, equipment employed must be authorized in accordance with the provisions of §24.51. In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

According to §27.50(B), the peak-to-average power ratio (PAPR) of the transmitter output power must not exceed 13 dB. The PAPR measurements should be made using either an instrument with complementary cumulative distribution function (CCDF) capabilities to determine that PAPR will not exceed 13 dB for more than 0.1 percent of the time or other Commission approved procedure. The measurement must be performed using a signal corresponding to the highest PAPR expected during periods of continuous transmission.

6.2 Test Procedure

The RF output terminal of the transmitter was connected to the input of the spectrum analyzer via a suitable attenuation. The RBW of the spectrum analyzer was set to 30kHz and the peak-to-average ratio (PAR) of the transmission was recorded. Record the maximum PAPR level associated with a probability of 0.1%.

Test Configuration for the emission bandwidth testing:

8 Frequency stability

8.1 Test Limit

GSM 850MHz	PCS 1900MHz
± 2.5 ppm	Must stay within the authorized frequency block

8.2 Test Procedure

Test Procedures for Temperature Variation:

1. The EUT was set up in the thermal chamber and connected with the base station.
2. With power OFF, the temperature was decreased to -10°C and the EUT was stabilized for three hours. Power was applied and the maximum change in frequency was recorded within one minute.
3. With power OFF, the temperature was raised in 10°C step up to 45°C . The EUT was stabilized at each step for at least half an hour. Power was applied and the maximum frequency change was recorded within one minute.
4. If the EUT can not be turned on at -10°C , the testing lowest temperature will be raised in 10°C step until the EUT can be turned on.

Test Procedures for Voltage Variation:

1. The EUT was placed in a temperature chamber at $25\pm 5^{\circ}\text{C}$ and connected with the base station.
2. The power supply voltage to the EUT was varied from DC 5V to 3V
3. The variation in frequency was measured for the worst case.

8.3 Measurement Equipment Used

Same as Radiated Emission Measurement

8.4 Test Result

PASS

All the test modes completed for test.

Conclusion: PASS			

9 RADIATED EMISSION TEST

9.1 Radiation Limit

The mean power of emissions must be attenuated below the mean power of the unmodulated carrier (P) on any frequency outside the frequency band by at least $(43 + 10 \log P)$ dB, in this case, -13dBm.

9.2 Test Setup

(1) Radiated Emission Test-Up Frequency 30MHz~1GHz

(2) Radiated Emission Test-Up Frequency Above 1GHz

9.3 Test Procedure

1. The EUT was placed on a non-conductive rotating platform with 0.8 meter height in an anechoic chamber. The radiated spurious emissions from 30MHz to 10th harmonious of fundamental frequency were measured at 3m with a test antenna and a spectrum analyzer with RBW= 1MHz,VBW= 1MHz ,peak detector settings.
2. During the measurement, the EUT was enforced in maximum power and linked with a base station. All the spurious emissions (record as LVL) at 3m were measured by rotation of the turntable and the test antenna raised and lowered over a range from 1 to 4 meters in both horizontally and vertically polarized orientations.
3. Final spurious emissions levels were measured by substitution method according to TIA/EIA-603-C. The EUT was replaced by dipole antenna (for frequency below 1GHz) or Horn antenna (for frequency above 1GHz) at same location with same polarize of receiver antenna and then a known power of each measure frequency from S.G. was applied into the dipole antenna or Horn antenna through a Tx cable, and then recorded the maximum Analyzer reading through raised and lowered the test antenna. The correction factor (in dB) = S.G. - Tx Cable loss + Substitution antenna gain –Substitution antenna Loss(only for Dipole antenna) - Analyzer reading. Then final spurious emissions were calculated with the correction factor, $EIRP = LVL + \text{Correction factor}$ and $ERP = EIRP - 2.15$

9.4 Test Result

PASS

All the test modes completed for test. The worst case of Radiated Emission; the test data of this mode was reported.

10 BAND EDGE

10.1 Limits

The mean power of emissions must be attenuated below the mean power of the unmodulated carrier (P) on any frequency outside the frequency band by at least $(43 + 10 \log P)$ dB, in this case, -13dBm.

10.2 Test Procedure

1. The EUT was connected to Spectrum Analyzer and Base Station via power divider.
2. The band edges of low and high channels for the highest RF powers were measured.

10.3 Test Result

PASS

All the test modes completed for test. The test data of this mode was reported.

Test Mode: GSM 850

Test Mode: GSM 1900

11 Conducted spurious emissions

11.1 Test Limit

The mean power of emissions must be attenuated below the mean power of the unmodulated carrier (P) on any frequency outside the frequency band by at least $(43 + 10 \log P)$ dB, in this case, -13dBm.

11.2 Test Procedure

1. The EUT was connected to spectrum analyzer and base station via power divider.
2. The low, middle and high channels of each band and mode's spurious emissions for 30MHz to 10th Harmonic were measured by Spectrum analyzer.

11.3 Measurement Equipment Used

Same as Radiated Emission Measurement

11.4 Test Result

PASS

All the test modes completed for test.

Test Mode: GSM 850 CH 128

Test Mode: GSM 850 CH 190

Test Mode: GSM 850 CH 251

Test Mode: GSM 1900 CH 512

Test Mode: GSM 1900 CH 661

Test Mode: GSM 1900 CH 810

12 PHOTOGRAPH OF TEST

12.1 Radiated Emission

12.2 Conducted Emission
