

TEST REPORT

APPLICANT:	MUNDO READER, S.L. CALLE SOFIA, 10 P.I EUROPOLIS Las Rozas - Madrid, 28232 Spain	
APPLICANT REFEREE:	MR. IVAN GARCIA	
EUT DESCRIPTION	3D PRINTER	
EUT MODEL	WITBOX GO!	
FCC ID	2AKDW-WG	
EUT TRADEMARK	MUNDO READER	
MANUFACTURER	MUNDO READER, S.L.	
REFERENCE STANDARDS	47 CFR FCC part 15 subpart C Section 15.207 Section 15.209 Section 15.225	
TEST REPORT NUMBER	FCCTR_170244-4	
TEST REPORT ISSUE DATE	31/07/2017	
TESTING LABORATORY	Prima Ricerca & Sviluppo S.r.l. Via Campagna, 92 -22020 Faloppio (Co) – Italy FCC test registration number: 421808	
TESTING LOCATION	As Above	
DATE OF TEST SAMPLE RECEIPT	February 2017	
DATE OF TEST	June 2017	
TESTED BY	Giacomo ARMELLINI Responsabile Laboratorio EMC e RADIO/ EMC and RADIO Laboratory Manager	
APPROVED BY	Enrico Banfi Laboratory Manager	

The test results reported in this test report shall refer only to the sample actually tested and shall not refer or be deemed to refer to bulk from which such a sample may be said to have been obtained.

Reproduction of this Test Report, should not be reproduced, except in full, without the written authorization of the Laboratory

2. TECHNICAL INFORMATION OF EQUIPMENT UNDER TEST (EUT)

2.1 Identification

Trademark:	MUNDO READER
Manufacturer:	MUNDO READER, S.L.
Type of Equipment :	3D PRINTER
Model name:	WITBOX GO!
Serial number :	prototype
FCC ID	2AKDW-WG
Country of manufacturer:	SPAIN

2.2 Technical data

Product type:	Radio Equipment
Radio type:	Intentional radiators
Product description / application	The EUT is 13,56MHz NFC Reader
Power supply requirements :	110Vac from the Printer
Operating Frequency range	13.553-13.567 MHz
Operating Frequency:	13.559MHz
Channel bandwidth	---
Channel spacing	---
Number of Channel	Single
Type of modulation :	AM
Antenna Type	Integral loop coil antenna
Power Control Setting	---

2.3 *Ports identification*

This section contains descriptions of all signal ports and AC/DC power input/output ports, the length and the type of the cable provided by manufacturer needed for the tests. Moreover it is specified if the ports are ever or optionally connected.

Port	Description	Connector	Max cable length
Enclosure	Plastic	Screw	-----
AC mains input/output ports	110 V 60 Hz	Plug	< 3m
DC mains input/output ports	Port not present	-----	-----
Signals / Control Ports	Serial port	uUSB	< 3m
Telecommunication port	Port not present	-----	-----
Note: During the tests all cables must be what provided the manufacturer or the same that used in the real employment of the EUT.			

2.4 *Auxiliary equipment*

- None

3. OPERATING TEST MODES AND CONDITIONS

In the following table there are the operating conditions adopted during tests identified by an indicator (#..) at which has been referred the item "Operating condition of the equipment under test"

<i>Operating condition</i>	<i>Description</i>
#1	<i>Continuous transmission</i>

Special Test Software: Special software and hardware by the Applicant to operate the EUT at each channel frequency continuously.

Special Hardware Used: The RF Module has been tested by an evaluation board supplied by BQ (See Photographic documentation).

Transmitter Test Antenna: The EUT has been tested with the antenna fitted in a manner typical of normal intended use as integral antenna equipment as described with the test results.

4. REFERENCE STANDARD / DOCUMENT FOR PERFORMED TESTS

6. MEASUREMENT UNCERTAINTY

Parameter	Uncertainty
Conducted Emission	±2,7 dBm
RF Output Power, conducted	±1,5 dB
Power spectral density, conducted	±3 dB
All Emissions Radiated	±4 dB
Temperature	±1°C
Humidity	±5%
DC Voltage	±3%
AC Voltage	±3%
Frequency	±0,00001%
Time	5%

7. TEST RESULTS

CONDUCTED LIMITS	10
FIELD STRENGTH	13
FREQUENCY TOLERANCE	20

**TEST
1.**

CONDUCTED LIMITS

**REFERENCE
DOCUMENT**

According to §15.207

- (a) Except as shown in paragraphs (b) and (c) of this section, for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal. The lower limit applies at the boundary between the frequency ranges

Frequency of emission (MHz)	Conducted limit (dB μ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

*Decreases with the logarithm of the frequency.

(b) The limit shown in paragraph (a) of this section shall not apply to carrier current systems operating as intentional radiators on frequencies below 30 MHz. In lieu thereof, these carrier current systems shall be subject to the following standards:

(1) For carrier current system containing their fundamental emission within the frequency band 535-1705 kHz and intended to be received using a standard AM broadcast receiver: no limit on conducted emissions.

(2) For all other carrier current systems: 1000 μ V within the frequency band 535-1705 kHz, as measured using a 50 μ H/50 ohms LISN.

(3) Carrier current systems operating below 30 MHz are also subject to the radiated emission limits in §15.205, §15.209, §15.221, §15.223, or §15.227, as appropriate.

(c) Measurements to demonstrate compliance with the conducted limits are not required for devices which only employ battery power for operation and which do not operate from the AC power lines or contain provisions for operation while connected to the AC power lines. Devices that include, or make provisions for, the use of battery chargers which permit operating while charging, AC adapters or battery eliminators or that connect to the AC power lines indirectly, obtaining their power through another device which is connected to the AC power lines, shall be tested to demonstrate compliance with the conducted limits.

According to §15.225 and §15.209:

- (a) The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.
- (b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters.
- (c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters.
- (d) The field strength of any emissions appearing outside of the 13.110-14.010 MHz band shall not exceed the general radiated emission limits in §15.209..

Trace-Mode:	Max. hold

TEST DESCRIPTION
Measurement is made at a semi-anechoic chamber that incorporates a turntable allowing a EUT rotation of 360°. A continuously - rotating, remotely - control led turntable is installed at the test site to support the EUT and facilitate determination of the direction of maximum radiation for each EUT emission frequency. The EUT is placed at test table. For emissions testing at or below 1 GHz, the table height is 80 cm above the reference ground plane. For emission measurements above 1 GHz, the table height is 1.5 m Measurement is made with the antenna positioned in both the horizontal and vertical planes of polarization. The measurement antenna is varied in height (1m~4m) above the reference ground plane to obtain the maximum signal strength. Distance between EUT and antenna is 3m. This investigation is performed with the EUT rotated 360°, the antenna height scanned between 1 m and 4 m, and the antenna rotated to repeat the measurements for both the horizontal and vertical antenna polarizations.

FCC Cfr 47 15.31 (f) (2)

(2) At frequencies below 30 MHz, measurements may be performed at a distance closer than that specified in the regulations; however, an attempt should be made to avoid making measurements in the near field. Pending the development of an appropriate measurement procedure for measurements performed below 30 MHz, when performing measurements at a closer distance than specified, the results shall be extrapolated to the specified distance by either making measurements at a minimum of two distances on at least one radial to determine the proper extrapolation factor or by using the square of an inverse linear distance extrapolation factor (40 dB/decade). This paragraph (f) shall not apply to Access BPL devices operating below 30 MHz.

Limit recalculation factor:

Limit @3m (dBuV/m) = Limit @300m (dBuV/m) - 40Log(3m/300m) dB = Limit @ 300m (dBuV/m) +80dB

Limit @3m (dBuV/m) = Limit @30m (dBuV/m) - 40Log(30m/300m) dB = Limit @ 30m (dBuV/m) +40dB

§15.225 Operation within the band 13.110-14.010 MHz.

(a) The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters.

(b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters.

(c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters.

(d) The field strength of any emissions appearing outside of the 13.110-14.010 MHz band shall not exceed the general radiated emission limits in §15.209.

Frequency Range (MHz)	Limit @30m (dBuV/m)	Limit @3m (dBuV/m)

Frequency Tolerance

REFERENCE DOCUMENT According to §15.225,

(e) The frequency tolerance of the carrier signal shall be maintained within $\pm 0.01\%$ of the operating frequency over a temperature variation of -20 degrees to $+ 50$ degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.
