
Instructions

A. Functional characteristics

- 1, the use of Advanced Bluetooth audio decoder chip, support for all Bluetooth devices input and output;
 - 2, soft tone clear dynamic, distinct levels;
 - 3, power supply mode uses 603048 polymer lithium battery, play longer.
 - 4, charging mode adopts constant voltage and constant current intelligent charging mode, fast, charging full.
 - 5, amplifier circuit using the most advanced digital audio amplifier circuit, effectively eliminate the interference of external AC wave.
 - 6, using imported steel horn voice coil, highlight the noble and elegant voice.
- Two, function instructions

B. Function indication

Description:

- 1, for the 5.5*2.5 charging interface, with the appropriate standard interface to the audio polymer lithium battery charging.
- 2, for the total power switch. Press once to turn on the power, then press one time to turn off the power.
- 3, audio volume control, upper and lower tracks selected by the Bluetooth media control.

C. Technical parameter

Charging voltage: DC4.2V-5V

Charging current: 300mA-500mA

Output power: 2.0W+2.0W

Impedance: 4 ohm

Frequency range: 20HZ-20KHZ.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1)

This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
