Note 1: EUT is the ab. of equipment under test.

Note 2: The antenna gain is declared by the customer and the laboratory is not responsible for the accuracy of the antenna gain.

### 2.2. Description of Available Antennas

| Test Mode | Transmit and Receive Mode                    | Description                                                   |
|-----------|----------------------------------------------|---------------------------------------------------------------|
| 5G WIFI   | <input checked="" type="checkbox"/> 2TX, 2RX | ANT 1 and ANT2 can be used as transmitting/receiving antenna. |

## 3. Test Laboratory

Guangzhou Jingce Testing Technology Co., Ltd.

Add.: No.10, Hefeng No.1 street, Huangpu District, Guangzhou, Guangdong, People's Republic of China

Association for Laboratory Accreditation(A2LA). Certificate Number: 6594.03

FCC Designation Number: CN1381. Test Firm Registration Number: 486550

IC Test Firm Registration Number: 31808

Conformity Assessment Body identifier: CN0173

## 4. RF Exposure Measurement

### 4.1. Requirement

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2 m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

## 4.2. Limits for Maximum Permissible Exposure (MPE)

| Frequency Range (MHz)                                 | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Average Time (Minutes) |
|-------------------------------------------------------|-------------------------------|-------------------------------|-------------------------------------|------------------------|
| Limits For General Population / Uncontrolled Exposure |                               |                               |                                     |                        |
| 0.3–1.34                                              | 614                           | 1.63                          | *(100)                              | 30                     |
| 1.34–30                                               | 824/f                         | 2.19/f                        | *(180/f <sup>2</sup> )              | 30                     |
| 30–300                                                | 27.5                          | 0.073                         | 0.2                                 | 30                     |

F = Frequency in MHz

\* = Plane-wave equivalent power density.

## 4.3. MPE Calculation Formula

$$P_d = (P_{out} * G) / (4 * \pi * R^2)$$

where

$P_d$  = power density in mW/cm<sup>2</sup>

$P_{out}$  = output power to antenna in mW

G = gain of antenna in linear scale

$\pi$  = 3.1416

R = distance between observation point and center of the radiator in cm

#### 4.4. Classification

The antenna of this product, under normal use condition, is at least 20cm away from the body of the user. So, this device is classified as Mobile Device.

##### Conducted Power

| Band    | Channel Frequency (MHz) | Average Power (dBm) |
|---------|-------------------------|---------------------|
| 5G WIFI | 5510                    | 11.5                |

#### 5. RF Exposure Calculation

We used the maximum power between the conducted power and ERP/EIRP to perform RF exposure exemption evaluation.

| Band    | Channel Frequency (MHz) | Conducted Power (dBm) | Antenna Gain (dBi) | Power Density (mW/cm <sup>2</sup> ) | Limit (mW/cm <sup>2</sup> ) | PASS/FAIL |
|---------|-------------------------|-----------------------|--------------------|-------------------------------------|-----------------------------|-----------|
| 5G WIFI | 5510                    | 11.5                  | 5.63               | 0.0103                              | 1                           | PASS      |

--END--
