

TEST REPORT OF PART15C FOR FCC

On Behalf of

Shenzhen DIST Technology limited

FCC ID: 2AL5I-ML-DT-RT-01GT

Product Description: Dog Training Collar

Test Model: ML-DT-RT-01G

Supplement Model: ML-DT-RT-01Y, ML-DT-RT-01H, ML-DT-RT-01X,
ML-DT-RT-02G, ML-DT-RT-02Y, ML-DT-RT-02H,
ML-DT-RT-02X, ML-DT-RT-01Z

Applicant: **Shenzhen DIST Technology limited**
A2-6F, 3 Building, B-118 Xijing Rd., Gushu,Baoan, Shenzhen,
China

Manufacturer: **Shenzhen DIST Technology limited**
A2-6F, 3 Building, B-118 Xijing Rd., Gushu,Baoan, Shenzhen,
China

Prepared by: **Shenzhen Laker Testing Technology Co.,Ltd**

1. GENERAL INFORMATION

1.1 Product Description for Equipment Under Test (EUT)

Client Information

Applicant: **Shenzhen DIST Technology limited**
Address of applicant: A2-6F, 3 Building, B-118 Xijing Rd., Gushu,Baoan, Shenzhen, China
Manufacturer: **Shenzhen DIST Technology limited**
Address of manufacturer: A2-6F, 3 Building, B-118 Xijing Rd., Gushu,Baoan, Shenzhen, China

General Description of E.U.T

Items	Description
EUT Description:	Dog Training Collar (TX Part)
Test Model:	ML-DT-RT-01G
Supplement Model:	ML-DT-RT-01Y, ML-DT-RT-01H, ML-DT-RT-01X, ML-DT-RT-02G, ML-DT-RT-02Y, ML-DT-RT-02H, ML-DT-RT-02X, ML-DT-RT-01Z
Trade mark:	N/A
Type of Modulation:	ASK
Frequency Band:	433.92MHz
Model Difference	N/A
Number of Channels	1
Antenna Type:	Internal antenna, fixed on PCB
Antenna Gain:	2.5dBi
Rated Voltage:	5DCV from USB port and battery

Note:

* The test data gathered are from the production sample provided by the manufacturer,
All above models in the table are the same just different with the feature and colour.

1.2 Test Facility

All measurement required was performed at laboratory of Centre Testing International (ShenZhen) Corporation ,Location at Building C, Sienific Innovation Park,Tiegang Reservoir, Xixiang, Baoan District, Shenzhen, Guangdong, The site and apparatus are constructed in conformance with the requirements of ANSI C63.10, CISPR 16-1-1 and other equivalent standards.

The test facility is recognized, certified, or accredited by the following organizations:

FCC – Registration No.: 565659

Centre Testing International (Shenzhen) Co., Ltd. EMC Laboratory has been registered and fully described in a report filed with the FCC (Federal Communications Commission). The acceptance letter from the FCC is maintained in our files. Registration 565659, expiration date is 01/27/2017.

IC Registration No.: 7408B

The 3m alternate test site of CENTRE TESTING INTERNATIONAL (SHENZHEN) CORPORATION. EMC Laboratory has been registered by Certification and Engineer Bureau of Industry Canada for the performance of with Registration NO.: 7408B on December 29, 2009.

CNAS - Registration No.: L1910

CENTRE TESTING INTERNATIONAL (SHENZHEN) CORPORATION,. to ISO/IEC 17025:2005 General Requirements for the Competence of Testing and Calibration Laboratories(CNAS-CL01 Accreditation Criteria for the Competence of Testing and Calibration Laboratories) for the competence in the field of testing.The acceptance letter from the CNAS is maintained in our files: Registration:L1910,January 12,2010.

1.3 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the Product as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Test item	Value (dB)
Conducted Emission Expanded Uncertainty	2.23
Radiated emission expanded uncertainty(9kHz-30MHz)	3.08
Radiated emission expanded uncertainty(30MHz-1000MHz)	4.42
Radiated emission expanded uncertainty(Above 1GHz)	4.06

2. SYSTEM TEST CONFIGURATION

The tests documented in this report were performed in accordance with ANSI C63.10-2013 and FCC CFR 47 Part 15 Subpart C.

2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner that intends to maximize its emission characteristics in a continuous normal application.

2.2 EUT Exercise

The calibrated antennas used to sample the radiated field strength are mounted on a non-conductive, motorized antenna mast 3 or 10 meters from the leading edge of the turntable.

2.3 General Test Procedures

Conducted Emissions The EUT is placed on the turntable, which is 0.8 m above ground plane. According to the requirements in ANSI C63.10-2013 and FCC CFR 47 Part 15 Subpart C Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using CISPR Quasi-Peak detector mode.

Radiated Emissions The EUT is a placed on as turntable, which is 0.8 m above ground plane. The turntable shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m/10m away from the receiving antenna, which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the maximum emissions, exploratory radiated emission measurements were made according to the requirements in ANSI C63.10-2013 and FCC CFR 47 Part 15 Subpart C.

2.4 List of Measuring Equipments

Test equipments list of CENTRE TESTING INTERNATIONAL (SHENZHEN) CORPORATION.

3. SUMMARY OF TEST RESULTS

Test Rules	Description of Test	Result
FCC Part15.207(a)	Condcuted Emission	Pass
FCC Part15.231(a)	Electric Field Strength of Fundamental Emission	Pass
FCC Part15.231(a)	Electric Field Strength of Spurious Emission	Pass
FCC Part15.231(b)	Duty Cycle	Pass
FCC Part15.231(c)	20dB bandwidth & 99% bandwidth	Pass
FCC Part15.231(a)	Deactivation Time	Pass
FCC Part15.203	Antenna Requirement	Pass

4. Conducted Emission

4.1 Applicable Standard

for an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies within the band 150 kHz to 30 MHz shall not exceed the limits in the following table, as measured using a 50 μ H/50 ohms line impedance stabilization network (LISN). Compliance with the provisions of this paragraph shall be based on the measurement of the radio frequency voltage between each power line and ground at the power terminal.

4.2 Limits

Limits for Class A digital devices

Frequency range (MHz)	Limits dB(μ V)	
	Quasi-peak	Average
0.15 to 0.50	79	66
0.50 to 30	73	60

NOTE: The lower limit shall apply at the transition frequency.

Limits for Class B digital devices

Frequency range (MHz)	Limits dB(μ V)	
	Quasi-peak	Average
0.15 to 0.50	66 to 56	56 to 46
0.50 to 5	56	46
5 to 30	60	50

NOTE: 1. The lower limit shall apply at the transition frequencies.
2. The limit decreases linearly with the logarithm of the frequency in the range 0.15 to 0.50 MHz.

4.3 EUT Test Setup

4.4 Procedure Of Conducted Emission Test

- a. The Product was placed on a nonconductive table above the horizontal ground reference plane, and 0.4 m from the vertical ground reference plane, and connected to the main through Line Impedance Stability Network (L.I.S.N).
- b. The RBW of the receiver was set at 9 kHz in 150 kHz ~ 30MHz with Peak and AVG detector in Max Hold mode. Run the receiver's pre-scan to record the maximum disturbance generated from Product in all power lines in the full band.
- c. For each frequency whose maximum record was higher or close to limit, measure its QP and AVG values and record.

5. Spurious Radiated Emission

5.1 Applicable Standard

For intentional device, according to 15.209(a), the general requirement of field strength of radiated emission from intentional radiators shall not exceed the following tables.

Limits for Class B digital devices

Frequency (MHz)	limits at 3m dB(μ V/m)
30-88	40.0
88-216	43.5
216-960	46.0
Above 960	54.0

- NOTE:**
1. The lower limit shall apply at the transition frequency.
 2. The limits shown above are based on measuring equipment employing a CISPR quasi-peak detector function for frequencies below or equal to 1000MHz.
 3. The limits shown above are based on measuring equipment employing an average detector function for frequencies above 1000MHz.

Limits for Class B digital devices

Frequency (MHz)	limits at 10m dB(μ V/m)
30-88	30.0
88-216	33.5
216-960	56.0
Above 960	64.0

- NOTE:**
1. The lower limit shall apply at the transition frequency.
 2. The limits shown above are based on measuring equipment employing a CISPR quasi-peak detector function for frequencies below or equal to 1000MHz.
 3. The limits shown above are based on measuring equipment employing an average detector function for frequencies above 1000MHz.

In addition to the provisions of 15.231(b), the field strength of emissions from intentional radiators operated under this section shall not exceed the following:

Funda- mental fre- quency (MHz)	Field strength of funda- mental (microvolts/ meter)	Field strength of spurious emissions (microvolts/meter)
40.66– 40.70.	2,250	225
70–130	1,250	125
130–174	¹ 1,250 to 3,750	¹ 125 to 375
174–260	3,750	375
260–470	¹ 3,750 to 12,500	¹ 375 to 1,250
Above 470	12,500	1,250

¹ Linear interpolations.

[Where F is the frequency in MHz, the formulas for calculating the maximum permitted fundamental field strengths are as follows: for the band 260-470 MHz, μ V/m at 3 meters = $41.6667(F) - 7083.3333$. The maximum permitted unwanted emission level is 20 dB below the maximum permitted fundamental level.]

5.2 Radiated Measurement Setup

30MHz ~ 1GHz:

Above 1GHz:

5.3 Test Equipment List and Details

See section 2.4.

5.4 Radiated Measurement Test Procedure

30MHz ~ 1GHz:

- The Product was placed on the non-conductive turntable 0.8/0.1 m above the ground at a chamber.
- Set the spectrum analyzer/receiver in Peak detector, Max Hold mode, and 120 kHz RBW. Record the maximum field strength of all the pre-scan process in the full band when the antenna is varied between 1~4 m in both horizontal and vertical, and the turntable is rotated from 0 to 360 degrees.
- For each frequency whose maximum record was higher or close to limit, measure its QP value: vary the antenna's height and rotate the turntable from 0 to 360 degrees to find the height and degree where Product radiated the maximum emission, then set the test frequency analyzer/receiver to QP Detector and specified bandwidth with Maximum Hold Mode, and record the maximum value.

Above 1GHz:

- The Product was placed on the non-conductive turntable 1.5/0.1 m above the ground at a chamber.
- Set the spectrum analyzer/receiver in Peak detector, Max Hold mode, and 1MHz RBW. Record the maximum field strength of all the pre-scan process in the full band when the antenna is varied in both horizontal and vertical, and the turntable is rotated from 0 to 360 degrees.
- For each frequency whose maximum record was higher or close to limit, measure its AV value: rotate the turntable from 0 to 360 degrees to find the degree where Product radiated the maximum emission, then set the test frequency analyzer/receiver to AV value and specified bandwidth with Maximum Hold Mode, and record the maximum value.

6	867.8400	43.03	15.94	N/A	58.97	80.83	-21.94	89	100	peak
	867.8400	/	/	-12.18	46.79	60.83	-14.04	178	100	Ave

The Spurious Emission (Above 1GHz) Of Vertical

No.	Frequency MHz	Reading dBuV/m	Corr. (dB)	Dutycycle Factor (dB)	Result dBuV/m	Limit dBuV/m	Margin dB	Deg. (°)	Height (cm)	Remark
1	1301.7600	71.53	-13.14	N/A	58.39	80.83	-22.44	211	150	Peak
2	1735.6800	62.01	-9.35	N/A	52.66	80.83	-28.17	123	150	Peak
3	2169.6000	61.34	-2.79	N/A	58.55	80.83	-22.28	256	150	Peak
	1301.7600	/	/	-12.18	46.21	60.83	-14.62	143	150	Ave
	1735.6800	/	/	-12.18	40.48	60.83	-20.35	258	150	Ave
	2169.6000	/	/	-12.18	46.37	60.83	-14.46	149	150	Ave

Note:

- Testing is carried out with frequency rang 9kHz to the tenth harmoinics,other than listed in the table above are attenuated more than 20dB below the permitted limits or the field strength is too small to be measured.
- Calculation of result is:
Measurement value(dBμV/m) = Reading Value(dBμV/m) + Correction Factor (dB)
- The Measurement value must be less than limit,the result is Pass.

6. Duty Cycle

6.1 Applicable Standard

According to FCC Part 15.231 (b)(2) and 15.35 (c), For pulse operation transmitter, the averaging pulsed emissions are calculated by peak value of measured emission plus duty cycle factor.

6.2 EUT Setup

6.3 Test Equipment List and Details

See section 2.4.

6.4 Test Procedure

With the EUT's antenna attached, the EUT's output signal was received by the test antenna, which was connected to the spectrum analyzer. Set the center frequency to 433.92MHz, then set the spectrum analyzer to Zero Span for the release time reading. During the testing, the switch was released then the EUT automatically deactivated.

6.5 Test Result

Type Of Pulse	Width Of Pulse (ms)	Quantity Of Pulse	Transmission Time (ms)	Total Time(T _{on}) (ms)
Pulse 1(Wide)	1.18	4	4.72	12.70
Pulse 2(Narrow)	0.38	21	7.98	

Test Period(T _p) (ms)	Total Time(T _{on}) (ms)	Duty Cycle (%)	Duty Cycle Factor (dB)
51.60	12.70	24.61	-12.18

Note:

Pulse Desensitization Correction Factor calculation:

Pulse Width(PW)=12.70ms

$2/PW=2/12.7\text{ms}=0.157\text{KHz}$

$RMB(100\text{kHz}) > 2/PW(0.157\text{kHz})$

Therefore PDCF conclude is not required.

The spectrum analyzer plots are attached as below:

7. Occupied Bandwidth Measurement

7.1 Applicable Standard

According to 47 CFR 15.231(c) The bandwidth of the emission shall be no wider than 0.25% of the centre frequency for devices operating above 70MHz and below 900MHz. Bandwidth is determined at the points 20dB down from the modulated carrier.

7.2 EUT Setup

7.3 Test Equipment List and Details

See section 2.4.

7.4 Test Procedure

- The 20dB bandwidth and 99% bandwidth is measured with a spectrum analyzer connected via a receive antenna placed near the EUT while the EUT is operating in transmission mode
- The 20dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 20dB.

7.5 Test Result

Channel Frequency (MHz)	Modulation	20dB bandwidth (KHz)	Limit (KHz)	Result
433.92MHz	ASK	51.489	$433.92 \times 0.25\% = 1084.8$	Pass

The spectrum analyzer plots are attached as below:

8. Deactivation Time

8.1 Applicable Standard

According to FCC §15.231(a)(1), A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds of being released

8.2 EUT Setup

8.3 Test Equipment List and Details

See section 2.4.

8.4 Test Procedure

- The EUT was placed on a wooded table which is 0.8m height and close to receiver antenna of spectrum analyzer
- The spectrum analyzer resolution bandwidth was set to 1 MHz and video bandwidth was set to 1 MHz to encompass all significant spectral components during the test. The spectrum analyzer was operated in linear scale and zero span mode after tuning to the transmitter carrier frequency.

8.5 Test Result

Transmission Type	Test Frequency (MHz)	Transmission Time (s)	Limit (s)	Result
Manually	433.92	0.240	5	Pass

The spectrum analyzer plots are attached as below:

9. ANTENNA REQUIREMENT

9.1 Standard Applicable

Section 15.203:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Section 15.247(b)/(c):

If transmitting antennas of directional gain greater than 6 dBi are used, the peak output power from the intentional radiator shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

If the intentional radiator is used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum peak output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

9.2 Antenna Connected Construction

The antenna used in this product is complied with Standard. The maximum Gain of the antenna lower than 6.0dBi and the antenna is integrated, fixed by enclosure, can not be changed except take apart the product.
