6.1 Test set-up and test procedure.

The test method is in accordance with ANSI C63.10-2013.

The EUT was set up in order to emit maximum disturbances.

The EUT was placed on an insulating support 0.8 and 1.5 m above the turntable which is part of the reference ground plane.

Overview sweeps were performed with the measurement receiver in max-hold mode and the peak detector activated in the frequency-range 30 – 1000 MHz. Above 1 GHz additionally the average detector was activated.

On 30 – 1000 MHz frequency range pre-scan was made in three orthogonal EUT orientations.

Above 1 GHz frequencies the EUT was placed on a positioner which allows free rotation around X and Y axis
