

## FCC RADIO TEST REPORT

For

**FCC ID: 2ALTX-TFMTKAW01232**

Report Reference No..... : 18EFAS10049 91  
 Date of issue ..... : 2018-10-15  
 Testing Laboratory ..... : DongGuan ShuoXin Electronic Technology Co., Ltd.  
 Address..... : Zone A, 1F, No. 6, XinGang Road YuanGang Street, XinAn District, ChangAn Town, DongGuan City, GuangDong, China

Applicant's name..... : TrekStor GmbH  
 Address..... : Berliner Ring 7, 64625 Bensheim, Germany  
 Manufacturer..... : Heyuan Vastking Electronic Co., Ltd.

### Test specification:

Test item description..... : TrekStor Surftab theatre L15  
 Trade Mark..... : TREKSTOR  
 Model/Type reference ..... : TFMTKAW01232  
 Ratings..... : INPUT: 100-240V~ 50/60HZ 1.2A, OUTPUT: DC12V 3A  
 DC 7.6V 4800mAh Li-polymer Battery

Responsible Engineer :

  
 Smile Wang

Authorized Signatory:

  
 King Wang

## TABLE OF CONTENTS

|                                                        |    |
|--------------------------------------------------------|----|
| 1. Summary of test Standards and results .....         | 4  |
| 2.1. Description of EUT .....                          | 5  |
| 2.2. Accessories of EUT .....                          | 5  |
| 2.3. Assistant equipment used for test .....           | 5  |

**Test Standard Used:** FCC Rules and Regulations Part 15 Subpart C (15.247)

**Test procedure used:** ANSI C63.10:2013, 558074 V05.

**We Declare:**

The equipment described above is tested by DongGuan ShuoXin Electronic Technology Co., Ltd. and in the configuration tested the equipment complied with the standards specified above. The test results are contained in this test report and DongGuan ShuoXin Electronic Technology Co., Ltd. is assumed of full responsibility for the accuracy and completeness of these tests.

**After test and evaluation, our opinion is that the equipment provided for test compliance with the requirement of the above FCC standards.**

| <b>Date of Test:</b> | 2018-10-15     | <b>Date of Report:</b> | 2018-10-19 |

Note: This report applies to above tested sample only. This report shall not be reproduced in parts without written approval of DongGuan ShuoXin Electronic Technology Co., Ltd.

## 1. Summary of test Standards and results

The EUT have been tested according to the applicable standards as referenced below.

| Description of Test Item                    | Standard                                       | Results |
|---------------------------------------------|------------------------------------------------|---------|
| 6dB Bandwidth And<br>99% Occupied Bandwidth | FCC Part 15.247 (a)(2)                         | PASS    |
| Peak Output Power                           | FCC Part 15.247(b)(3)                          | PASS    |
| Power Spectral Density                      | FCC Part 15.247(e)                             | PASS    |
| Spurious Emissions at Antenna Port          | FCC Part 15.247(d)                             | PASS    |
| Spurious Emissions                          | FCC Part 15.205, 15.209,<br>FCC Part 15.247(d) | PASS    |
| 100 kHz Bandwidth of Frequency Band<br>Edge | FCC Part 15.247(d)                             | PASS    |
| AC Line Conducted Emissions                 | FCC Part 15.207 (a)                            | PASS    |
| Antenna requirement                         | FCC Part 15: 15.203                            | PASS    |

## 2. GENERAL TEST INFORMATION

### 2.1. Description of EUT

|                          |   |                                                                                       |
|--------------------------|---|---------------------------------------------------------------------------------------|
| EUT* Name                | : | TrekStor Surftab theatre L15                                                          |
| Model Number             | : | TFMTKAW01232                                                                          |
| Trade Mark               | : | TREKSTOR                                                                              |
| EUT function description | : | TrekStor Surftab theatre L15 with WiFi & BT function.                                 |
| Power supply             | : | INPUT: 100-240V~ 50/60HZ 1.2A, OUTPUT: DC12V 3A<br>DC 7.6V 4800mAh Li-polymer Battery |
| Adaptor                  | : | JHD-AP036U-120300AA-A                                                                 |
| Radio Specification      | : | BT V4.0                                                                               |
| Operation frequency      | : | 2.402 ~2.480 GHz                                                                      |
| Modulation               | : | GFSK                                                                                  |
| Antenna Type             | : | FPCB Antenna, maximum PK gain: 1dBi                                                   |
| FVIN                     | : | NA                                                                                    |
| Date of Receipt          | : | 2018/10/19                                                                            |
| Sample Type              | : | N/A                                                                                   |

Note: EUT is the ab. of equipment under test.

### 2.2. Accessories of EUT

| Description of Accessories | Manufacturer                      | Model number or Type  | Other |
|----------------------------|-----------------------------------|-----------------------|-------|
| Adapter                    | Shen Zhen Jihongda Power Co., Ltd | JHD-AP036U-120300AA-A | /     |

### 2.3. Assistant equipment used for test

| Description of Assistant equipment | Manufacturer | Model number or Type | Other |
|------------------------------------|--------------|----------------------|-------|
| /                                  | /            | /                    | /     |

## 2.4. Block diagram of EUT configuration for test

EUT was connected to control to a special test jig provided by manufacturer which has a standard RSS-232 connector to connect to Notebook, and the Notebook will run a special test software "MP\_v1.1.1" provided by manufacturer to control EUT work in test mode as blow table.

| Tested mode, channel, and data rate information                                                                                     |                                |              |                    |
|-------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|--------------|--------------------|
| Mode                                                                                                                                | data rate (Mbps)<br>(see Note) | Channel      | Frequency<br>(MHz) |
| BLE                                                                                                                                 | 1                              | Low :CH00    | 2402               |
|                                                                                                                                     | 1                              | Middle: CH19 | 2440               |
|                                                                                                                                     | 1                              | High: CH39   | 2480               |
| Note: According exploratory test, EUT will have maximum output power in those data rate, so those data rate were used for all test. |                                |              |                    |

## 2.5. Test environment conditions

During the measurement the environmental conditions were within the listed ranges:

|                    |           |
|--------------------|-----------|
| Temperature range: | 21-25℃    |
| Humidity range:    | 40-75%    |
| Pressure range:    | 86-106kPa |

## 2.6. Measurement uncertainty

| Test Item                                               | Uncertainty           |
|---------------------------------------------------------|-----------------------|
| Uncertainty for Conduction emission test (9kHz-150kHz)  | 3.7 dB                |
| Uncertainty for Conduction emission test (150kHz-30MHz) | 3.3 dB                |
| Uncertainty for Radiation Emission test (30MHz-200MHz)  | 4.60 dB (Polarize: V) |
|                                                         | 4.60 dB (Polarize: H) |
| Uncertainty for Radiation Emission test (200MHz-1GHz)   | 6.10 dB (Polarize: V) |
|                                                         | 5.08 dB (Polarize: H) |
| Uncertainty for Radiation Emission test (1GHz-6GHz)     | 5.01 dB (Polarize: V) |
|                                                         | 5.01 dB (Polarize: H) |
| Uncertainty for Radiation Emission test (6GHz-18GHz)    | 5.26 dB (Polarize: V) |
|                                                         | 5.26 dB (Polarize: H) |
| Uncertainty for Radiation Emission test (18GHz-40GHz)   | 5.06 dB (Polarize: V) |
|                                                         | 5.06 dB (Polarize: H) |
| Uncertainty for radio frequency                         | $\pm 0.048\text{kHz}$ |
| Uncertainty for conducted RF Power                      | $\pm 0.32\text{dB}$   |

Note: This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of  $k=2$ .

### 3. 6dB Bandwidth and 99% Occupied Bandwidth

#### 3.1. Test equipment

| Item | Equipment         | Manufacturer  | Model No.   | Serial No. | Calibrated until | Calibrated Date |

#### 3.2. Block diagram of test setup

#### 3.3. Limits

For direct sequence systems, the minimum 6dB bandwidth shall be at least 500 KHz

#### 3.4. Test Procedure

- (1) Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
- (2) Position the EUT without connection to measurement instrument. Turn on the EUT and connect it to measurement instrument. Then set it to any one convenient frequency within its operating range. Set a reference level on the measuring instrument equal to the highest peak value.
- (3) Measure the frequency difference of two frequencies that were attenuated 6 dB from the reference level. Record the frequency difference as the emission bandwidth.
- (4) Repeat above procedures until all frequencies measured were complete.

**3.. Test Result**

| EUT Set Mode | CH or Frequency | 6 dB bandwidth | 99% dB bandwidth | Limt    | Conclusion |
|--------------|-----------------|----------------|------------------|---------|------------|

### 4.2. Block diagram of test setup

### 4.3. Limits

For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz bands: 1 Watt. If transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

### 4.4. Test Procedure

1. Place the EUT on a bench and set it in transmitting mode.
2. A wide band power meter with a matched thermocouple detector was used to directly measure the output power from the RF output port of the EUT in continuously transmitting mode.
3. The measurement shall be repeated at the lowest, the middle, and the highest channel of the stated frequency range.

**4.5. TEST RESULT**

| EUT Set Mode | CH    | Result(dBm) | Total Power<br>(dBm) | Limit | Conclusion |
|--------------|-------|-------------|----------------------|-------|------------|

### 5.2. Block diagram of test setup

### 5.3. Limits

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8dBm in any 3 kHz band during any time interval of continuous transmission.

#### 5.4. TEST PROCEDURE

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generatorl.
2. Position the EUT was set without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range
3. According to KDB 558074 D01 DTS Meas Guidance v05, set the RBW = 3 kHz, VBW = 10 kHz, Set the span to 1.5 times the DTS channel bandwidth.
4. Use the peak marker function to determine the maximum power level in any 3 kHz band segment within the fundamental EBW

#### 5.5. Test Result

| EUT Set Mode | CH    | Result(dBm) | Total (dBm) | Limit (dBm/3KHz) | Conclusion |

#### 6.3.3 Limit for this EUT

The radiated emission tests were performed in the 3 meters test site, using the setup accordance with the

ANSI C63.10:2013. The specification used was the FCC 15.209, and FCC 15.247 limits.

## 6.4. TEST PROCEDURE

- (1) EUT was placed on a non-metallic table, 80 cm above the ground plane inside a semi-anechoic chamber.
- (2) Setup EUT and assistant system according clause 2.4 and 8.2
- (3) Test antenna was located 3m from the EUT on an adjustable mast. Below pre-scan procedure was first performed in order to find prominent radiated emissions.
  - (a) Change work frequency or channel of device if practicable.
  - (b) Change modulation type of device if practicable.
  - (c) Change power supply range from 85% to 115% of the rated supply voltage
  - (d) Rotated EUT though three orthogonal axes to determine the attitude of EUT arrangement produces highest emissions
- (4) Spectrum frequency from 9MHz to 25GHz (tenth harmonic of fundamental frequency) was investigated, and no any obvious emission were detected from 9KHz to 30MHz and 18GHz to 25GHz, so below final test was performed with frequency range from 30MHz to 18GHz.
- (5) For final emissions measurements at each frequency of interest, the EUT were rotated and the antenna height was varied between 1m and 4m in order to maximize the emission. Measurements in both horizontal and vertical polarities were made and the data was recorded. In order to find the maximum emission, the relative positions of equipments and all of the interface cables were changed according to ANSI C63.10 2013 on Radiated Emission test.
- (6) For emissions from 30MHz to 1GHz, Quasi-Peak values were measured with EMI Receiver and the bandwidth of Receiver is 120 KHz.
- (7) For emissions above 1GHz, both Peak and Average level were measured with Spectrum Analyzer, and the RBW is set at 1MHz, VBW is set at 3MHz for Peak measure, Detector is at PK; RBW is set at 1MHz, VBW is set at 3MHz for Average measure, Detector is at RMS..

#### Note:

The amplitude of spurious emissions which are attenuated by more than 20dB below the permissible value has no need to be reported.

Distance extrapolation factor =  $20 \log (\text{specific distance/test distance})$ (dB);

Limit line = specific limits(dBuv) + distance extrapolation factor

### 7.2. Block diagram of test setup

### 7.3. Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

#### 7.4. Test Procedure

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Remove the antenna from the EUT and then connect to a low loss RF cable from the antenna port to a EMI test receiver, then turn on the EUT and make it operate in transmitting mode. Then set it to Low Channel and High Channel within its operating range, and make sure the instrument is operated in its linear range.
3. Set RBW = 100 kHz, VBW = 300 kHz with a convenient frequency span including 100 kHz bandwidth from band edge.
4. Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.
5. Repeat above procedures until all measured frequencies were complete.

#### 7.5. Test result

| Frequency Band | Delta Peak to band emission (dBc) | >Limit (dBc) | Result |
|----------------|-----------------------------------|--------------|--------|
| BLE Mdoe       |                                   |              |        |

### 9.2 Block diagram of test setup

### 9.3 Power Line Conducted Emission Limits(Class B)

| Frequency       | Quasi-Peak Level<br>dB(μV) | Average Level<br>dB(μV) |
|-----------------|----------------------------|-------------------------|
| 150kHz ~ 500kHz | 66 ~ 56*                   | 56 ~ 46*                |
| 500kHz ~ 5MHz   | 56                         | 46                      |
| 5MHz ~ 30MHz    | 60                         | 50                      |

Note 1: \* Decreasing linearly with logarithm of frequency.

Note 2: The lower limit shall apply at the transition frequencies.

## 9.4 Test Procedure

The EUT and Support equipment, if needed, were put placed on a non-metallic table, 80cm above the ground plane.

Configuration EUT to simulate typical usage as described in clause 2.4 and test equipment as described in clause 10.2 of this report.

All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4.

All support equipment power received from a second LISN.

Emissions were measured on each current carrying line of the EUT using an EMI Test Receiver connected to the LISN powering the EUT.

The Receiver scanned from 150 kHz to 30MHz for emissions in each of the test modes.

During the above scans, the emissions were maximized by cable manipulation.

The test mode(s) described in clause 2.4 were scanned during the preliminary test.

After the preliminary scan, we found the test mode producing the highest emission level.

The EUT configuration and worse cable configuration of the above highest emission levels were recorded for reference of the final test.

EUT and support equipment were set up on the test bench as per the configuration with highest emission level in the preliminary test.

A scan was taken on both power lines, Neutral and Line, recording at least the six highest emissions.

Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit.

The test data of the worst-case condition(s) was recorded.

The bandwidth of test receiver is set at 9 KHz.

## 9.5 Test Result

PASS. (See below detailed test result)

Note1: All emissions not reported below are too low against the prescribed limits.

Note2: “----” means peak detection; “-----” mans average detection

The test result is calculated as the following:

- (1) Result = Reading + Correct Factor
- (2) Correct Factor = (LISN, ISN, PLC or Current Probe) Factor + Cable Loss +Attenuator
- (3) Margin = Result - Limit

## 10. Antenna Requirements

### 10.1. Limit

For intentional device, according to FCC 47 CFR Section 15.203, an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. And according to FCC 47 CFR Section 15.247 (b), if transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceeds 6dBi.

### 10.2. Result

The antennas used for this product are built-in undetachable FPCB antenna and that no antenna other than that furnished by the responsible party shall be used with the device, the maximum peak gain of the transmit antenna is only 1dBi. The EUT has an internal antenna, the directional gain of antenna is 1 dBi, and the antenna connector is designed with permanent attachment and no consideration of replacement. Therefore the EUT is considered sufficient to comply with the provision.
