

FCC Attestation Letter – Module Installation

Date: 07/23/2026

Subject: Attestation of Correct Installation of Murata Wireless Module

To Whom It May Concern,

We hereby attest that the Murata wireless module (FCC ID: VPYLBES5PL2EL) installed in the Computer Board is mounted in accordance with the manufacturer's installation instructions and recommendations.

It is noted that the original Murata application was a LMA due to not being compliant with the power supply regulation. As a result of placing the module on and integrating it into the PCB, the module is now compliant with the modular power supply regulation requirements.

The module has been integrated without modification to its RF circuitry, shielding, antenna interface, or operating characteristics covered by the original FCC certification.

Furthermore, the integrated trace antenna associated with the certified Murata module is implemented as specified by Murata and is correctly mounted within the host product design.

No changes have been made that would alter the Conducted RF characteristics of the certified module.

Sincerely,

Alessandro Pali
