*\*All measurement and test data in this report was gathered from production sample serial number: 180817001*

*(Assigned by BACL, Taiwan)*

## 1.2 Objective

This report is prepared on behalf of *3Egreen Technology, INC.* in accordance with Part 2, Subpart J, Part 15, Subparts A and C of the Federal Communication Commission's rules.

The objective is to determine compliance with FCC Part 15.247 rules for Output Power, Antenna Requirements, 6 dB Bandwidth, Power Spectral Density, 100 kHz Bandwidth of Band Edges Measurement, Conducted and Radiated Spurious Emissions.

**1.3 Related Submittal(s)/Grant(s)**

N/A

**1.4 Test Methodology**

All measurements contained in this report were conducted with ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices

**1.5 Test Facility**

The Test site used by Bay Area Compliance Laboratories Corp. (Taiwan) to collect test data is located on

☒ 70, Lane 169, Sec. 2, Datong Road, Xizhi Dist., New Taipei City 22183, Taiwan, R.O.C.

☐ 68-3, Lane 169, Sec. 2, Datong Road, Xizhi Dist., New Taipei City 22183, Taiwan, R.O.C.

Bay Area Compliance Laboratories Corp. (Taiwan) Lab is accredited to ISO 17025 by Taiwan Accreditation Foundation (TAF code: 3180) and the FCC designation No.TW3180 under the Mutual Recognition Agreement (MRA) in FCC Test. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.10.

The Federal Communications Commission has the reports on file and is listed under FCC Registration No.: 974454. The test site has been approved by the FCC for public use and is listed in the FCC Public Access Link (PAL) database.

## 2 System Test Configuration

### 2.1 Description of Test Configuration

For BT BLE mode, there are totally 40 channels.

| Channel | Frequency (MHz) | Channel | Frequency (MHz) |
|---------|-----------------|---------|-----------------|
| 1       | 2402            | 21      | 2442            |
| 2       | 2404            | --      | --              |
| 3       | 2406            | --      | --              |
| 4       | 2408            | 38      | 2476            |
| --      | --              | 39      | 2478            |
| 20      | 2440            | 40      | 2480            |

For BLE Modes were tested with channel 1, 20 and 40

### 2.2 Equipment Modifications

No modification was made to the EUT

### 2.3 EUT Exercise Software

No test software was used.

### 2.4 Support Equipment List and Details

| Description | Manufacturer | Model Number | FCC ID/DOC | S/N         |
|-------------|--------------|--------------|------------|-------------|
| NB          | DELL         | E6410        | PD98260NGU | 10912240367 |

### 2.5 External Cable List and Details

| Cable Description | Length (m) | From | To  |
|-------------------|------------|------|-----|
| Mini USB Cable    | 1.5        | NB   | EUT |

## 2.6 Block Diagram of Test Setup

See test photographs attached in setup photos for the actual connections between EUT and support equipment.

### Radiation:

Below 1GHz:

Above 1GHz:

## 2.7 Duty Cycle

According to KDB 558074 D01 15.247 Meas Guidance v05 section 6.0:

All measurements are to be performed with the EUT transmitting at 100% duty cycle at its maximum power control level; however, if 100% duty cycle cannot be achieved, measurements of duty cycle, x, and maximum power transmission duration, T, are required for each tested mode of operation.

| Radio Mode | On Time (ms) | Period (ms) | Duty Cycle (%) | Duty Cycle Correction Factor (dB) |
|------------|--------------|-------------|----------------|-----------------------------------|
| BLE        | 15           | 15          | 100            | 0                                 |

Note: Duty Cycle Correction Factor =  $10 \cdot \log(1/\text{duty cycle})$

Date: 11.SEP.2018 17:40:38

### 3 Summary of Test Results

| FCC Rules                    | Description of Test                      | Result         |
|------------------------------|------------------------------------------|----------------|
| §15.247(i), §1.1310, §2.1091 | Maximum Permissible Exposure (MPE)       | Compliance     |
| §15.203                      | Antenna Requirement                      | Compliance     |
| §15.207(a)                   | AC Line Conducted Emissions              | Not applicable |
| §15.205, §15.209, §15.247(d) | Spurious Emissions                       | Compliance     |
| §15.247(a)(2)                | 6 dB Emission Bandwidth                  | Compliance     |
| §15.247(b)(3)                | Maximum Peak Output Power                | Compliance     |
| §15.247(d)                   | 100 kHz Bandwidth of Frequency Band Edge | Compliance     |
| §15.247(e)                   | Power Spectral Density                   | Compliance     |

Not applicable: Device only supports battery.

## 4 Test Equipment List and Details

| Description                        | Manufacturer                   | Model                    | Serial Number       | Calibration Date | Calibration Due Date |
|------------------------------------|--------------------------------|--------------------------|---------------------|------------------|----------------------|
| Radiated Room (966-A)              |                                |                          |                     |                  |                      |
| Bilog Antenna with 6 dB Attenuator | SUNOL SCIENCES & MINI-CIRCUITS | JB6/UNAT-6+              | A050115/15542_01    | 2017/12/20       | 2018/12/19           |
| Horn Antenna                       | EMCO                           | 3115                     | 9311-4158           | 2018/04/20       | 2019/04/19           |
| Horn Antenna                       | ETS-Lindgren                   | 3116                     | 62638               | 2017/09/13       | 2018/09/12           |
| Preamplifier                       | Sonoma                         | 310N                     | 130602              | 2018/07/04       | 2019/07/03           |

| Attenuator                         | MINI-CIRCUITS                  | BW-S10W5+                | N/A                 | 2018/03/08       | 2019/03/07           |
| Power Sensor                       | KEYSIGHT                       | U2021XA                  | MY54080018          | 2018/03/07       | 2019/03/06           |

**\*Statement of Traceability:** BACL Corp. attests that all of the calibrations on the equipment items listed above were traceable to the SI System of Units via the R.O.C. Center for Measurement Standards of the Electronics Testing Center, Taiwan (ETC) or to another internationally recognized National Metrology Institute (NMI), and were compliant with the current Taiwan Accreditation Foundation (TAF) requirements

## 5 FCC §15.247(i), §1.1310, § 2.1091 - Maximum Permissible Exposure (MPE)

### 5.1 Applicable Standard

According to subpart 15.247(i) and subpart §1.1310, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

Limits for Maximum Permissible Exposure (MPE) (§1.1310, §2.1091)

| (B) Limits for General Population/Uncontrolled Exposure |                               |                               |                                     |                          |
|---------------------------------------------------------|-------------------------------|-------------------------------|-------------------------------------|--------------------------|
| Frequency Range (MHz)                                   | Electric Field Strength (V/m) | Magnetic Field Strength (A/m) | Power Density (mW/cm <sup>2</sup> ) | Averaging Time (minutes) |
| 0.3–1.34                                                | 614                           | 1.63                          | *(100)                              | 30                       |
| 1.34–30                                                 | 824/f                         | 2.19/f                        | *(180/f <sup>2</sup> )              | 30                       |
| 30–300                                                  | 27.5                          | 0.073                         | 0.2                                 | 30                       |
| 300–1500                                                | /                             | /                             | f/1500                              | 30                       |
| 1500–100,000                                            | /                             | /                             | 1.0                                 | 30                       |

f = frequency in MHz; \* = Plane-wave equivalent power density;

According to §1.1310 and §2.1091 RF exposure is calculated.

### Calculated Formulary:

Predication of MPE limit at a given distance

$S = PG/4\pi R^2$  = power density (in appropriate units, e.g. mW/cm<sup>2</sup>);

P = power input to the antenna (in appropriate units, e.g., mW);

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally numeric gain;

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm);

## 5.2 RF Exposure Evaluation Result

### MPE evaluation:

| Mode | Frequency Range (MHz) | Antenna Gain |           | Target Power |      | Evaluation Distance (cm) | Power Density (mW/cm <sup>2</sup> ) | MPE Limit (mW/cm <sup>2</sup> ) |
|------|-----------------------|--------------|-----------|--------------|------|--------------------------|-------------------------------------|---------------------------------|
|      |                       | (dBi)        | (numeric) | (dBm)        | (mW) |                          |                                     |                                 |
| BLE  | 2402-2480             | 2.1          | 1.62      | 0.5          | 1.12 | 20                       | 0.0004                              | 1                               |

**Result:** MPE evaluation meet 20 cm the requirement of standard.

## 6 FCC §15.203 – Antenna Requirements

### 6.1 Applicable Standard

According to § 15.203,

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the user of a standard antenna jack or electrical connector is prohibited.

And according to FCC 47 CFR section 15.247 (b), if the transmitting antennas of directional gain greater than 6dBi are used, the power shall be reduced by the amount in dB that the directional gain of the antenna exceed 6 dBi.

### 6.2 Antenna List and Details

| Manufacturer              | Type         | Antenna Gain | Result     |
|---------------------------|--------------|--------------|------------|
| RIMON Technology Co., LTD | Chip Antenna | 2.1 dBi      | Compliance |

The EUT has an internal antenna arrangement, which was permanently attached, fulfill the requirement of this section.

## 7 FCC §15.209, §15.205, §15.247(d) – Spurious Emissions

### 7.1 Applicable Standard

As per FCC §15.35(d): Unless otherwise specified, on any frequency or frequencies above 1000 MHz, the radiated emission limits are based on the use of measurement instrumentation employing an average detector function. Unless otherwise specified, measurements above 1000 MHz shall be performed using a minimum resolution bandwidth of 1 MHz.

As Per FCC §15.205(a) except as show in paragraph (d) of this section, only spurious emissions are permitted in any of the frequency bands listed below:

| MHz                 | MHz                   | MHz             | GHz           |
|---------------------|-----------------------|-----------------|---------------|
| 0.090 – 0.110       | 16.42 – 16.423        | 960 – 1240      | 4. 5 – 5. 15  |
| 0.495 – 0.505       | 16.69475 – 16.69525   | 1300 – 1427     | 5. 35 – 5. 46 |
| 2.1735 – 2.1905     | 25.5 – 25.67          | 1435 – 1626.5   | 7.25 – 7.75   |
| 4.125 – 4.128       | 37.5 – 38.25          | 1645.5 – 1646.5 | 8.025 – 8.5   |
| 4.17725 – 4.17775   | 73 – 74.6             | 1660 – 1710     | 9.0 – 9.2     |
| 4.20725 – 4.20775   | 74.8 – 75.2           | 1718.8 – 1722.2 | 9.3 – 9.5     |
| 6.215 – 6.218       | 108 – 121.94          | 2200 – 2300     | 10.6 – 12.7   |
| 6.26775 – 6.26825   | 123 – 138             | 2310 – 2390     | 13.25 – 13.4  |
| 6.31175 – 6.31225   | 149.9 – 150.05        | 2483.5 – 2500   | 14.47 – 14.5  |
| 8.291 – 8.294       | 156.52475 – 156.52525 | 2690 – 2900     | 15.35 – 16.2  |
| 8.362 – 8.366       | 156.7 – 156.9         | 3260 – 3267     | 17.7 – 21.4   |
| 8.37625 – 8.38675   | 162.0125 – 167.17     | 3.332 – 3.339   | 22.01 – 23.12 |
| 8.41425 – 8.41475   | 167.72 – 173.2        | 3 3458 – 3 358  | 23.6 – 24.0   |
| 12.29 – 12.293      | 240 – 285             | 3.600 – 4.400   | 31.2 – 31.8   |
| 12.51975 – 12.52025 | 322 – 335.4           |                 | 36.43 – 36.5  |
| 12.57675 – 12.57725 | 399.9 – 410           |                 | Above 38.6    |
| 13.36 – 13.41       | 608 – 614             |                 |               |

As per FCC §15.209(a): Except as provided elsewhere in this Subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

| Frequency (MHz) | Field Strength (micro volts/meter) | Measurement Distance (meters) |
|-----------------|------------------------------------|-------------------------------|
| 0.009 - 0.490   | 2400/F(kHz)                        | 300                           |
| 0.490 - 1.705   | 24000/F(kHz)                       | 30                            |
| 1.705 - 30.0    | 30                                 | 30                            |
| 30 - 88         | 100**                              | 3                             |
| 88 - 216        | 150**                              | 3                             |
| 216 - 960       | 200**                              | 3                             |
| Above 960       | 500                                | 3                             |

\*\* Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this Section shall not be located in the frequency bands 54-72 MHz, 76-88 MHz, 174-216 MHz or 470-806 MHz. However, operation within these frequency bands is permitted under other sections of this Part, e.g., Sections 15.231 and 15.241.

As per FCC §15.247 (d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

## 7.2 Measurement Uncertainty

All measurements involve certain levels of uncertainties, especially in field of EMC. The factors contributing to uncertainties are spectrum analyzer, cable loss, antenna factor calibration, antenna directivity, antenna factor variation with height, antenna phase center variation, antenna factor frequency interpolation, measurement distance variation, site imperfections, mismatch (average), and system repeatability.

Based on CISPR 16-4-2:2011, the expended combined standard uncertainty of radiation emissions at Bay Area Compliance Laboratories Corp. (Taiwan) is shown in below table. And the uncertainty will not be taken into consideration for the test data recorded in the report.

| Frequency      | Measurement uncertainty                |
|----------------|----------------------------------------|
| 30 MHz~200 MHz | 3.76 dB (k=2, 95% level of confidence) |
| 200 MHz~1 GHz  | 4.12 dB (k=2, 95% level of confidence) |
| 1 GHz~6 GHz    | 4.84 dB (k=2, 95% level of confidence) |
| 6 GHz~18 GHz   | 5.16 dB (k=2, 95% level of confidence) |
| 18 GHz~26 GHz  | 4.84 dB (k=2, 95% level of confidence) |
| 26 GHz~40 GHz  | 4.30 dB (k=2, 95% level of confidence) |

## 7.3 EUT Setup

Blow 1 GHz:

Above 1 GHz:

Radiated emission tests were performed in the 3 meters chamber test site, using the setup accordance with the ANSI C63.10-2013. The specification used was the FCC Part 15.209 and FCC 15.247 Limits.

#### 7.4 EMI Test Receiver & Spectrum Analyzer Setup

The system was investigated from 30 MHz to 26.5 GHz. During the radiated emission test, the EMI test receiver was set with the following configurations measurement method 6.3 in ANSI C63.10.

| Frequency Range | RBW     | VBW   | Detector | Duty cycle | Measurement method |
|-----------------|---------|-------|----------|------------|--------------------|
| 30-1000 MHz     | 120 kHz | /     | QP       |            | QP                 |
| Above 1 GHz     | 1 MHz   | 3 MHz | PK       |            | PK                 |
|                 | 1 MHz   | 3 MHz | RMS      | >98%       | Ave                |
|                 | 1 MHz   | 1/T   | PK       | <98%       | Ave                |

#### 7.5 Test Procedure

Maximizing procedure was performed on the highest emissions to ensure that the EUT complied with all installation combinations.

All data was recorded in the Quasi-peak detector mode from 30 MHz to 1 GHz and PK and average detector modes for frequencies above 1 GHz.

## 7.6 Corrected Factor & Margin Calculation

The Correct Factor is calculated by adding the Antenna Factor and Cable Loss, and subtracting the Amplifier Gain from the Meter Reading. The basic equation is as follows:

$$\text{Correct Factor} = \text{Antenna Factor} + \text{Cable Loss} - \text{Amplifier Gain}$$

The “Margin” column of the following data tables indicates the degree of compliance with the applicable limit. For example, a margin of -7 dB means the emission is 7 dB below the limit. The equation for margin calculation is as follows:

$$\text{Margin} = \text{Result} - \text{Limit}$$

## 7.7 Test Results Summary

According to the data in the following table, the EUT complied with the FCC §15.209 Limit. Refer to CISPR16-4-2:2011 and CISPR 16-4-1:2009, the measured level complies with the limit if

$$L_m + U(L_m) \leq L_{\text{lim}} + U_{\text{Cispr}}$$

In BACL,  $U(L_m)$  is less than  $U_{\text{Cispr}}$ , if  $L_m$  is less than  $L_{\text{lim}}$ , it implies that the EUT complies with the limit.

## 7.8 Test Environmental Conditions

|                    |          |
|--------------------|----------|
| Temperature:       | 25.2° C  |
| Relative Humidity: | 58 %     |
| ATM Pressure:      | 1010 hPa |

*The Radiation Spurious Emissions testing was performed by Tom Hsu on 2018-09-08.  
The Conducted Spurious Emissions testing was performed by Tom Hsu on 2018-09-11.*

## **8 FCC §15.247(a)(2) – 6 dB Emission Bandwidth**

---

### **8.1 Applicable Standard**

According to FCC §15.247(a) (2).

Systems using digital modulation techniques may operate in the 902–928 MHz, 2400–2483.5 MHz, and 5725–5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.

### **8.2 Test Procedure**

The steps for the first option are as follows:

- a) Set RBW = 100 kHz.
- b) Set the VBW  $\geq [3 \times \text{RBW}]$ .
- c) Detector = peak.
- d) Trace mode = max hold.
- e) Sweep = auto couple.
- f) Allow the trace to stabilize.
- g) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.

### 8.3 Test Environmental Conditions

|                    |          |
|--------------------|----------|
| Temperature:       | 26° C    |
| Relative Humidity: | 58 %     |
| ATM Pressure:      | 1010 hPa |

The testing was performed by Tom Hsu on 2018-09-11.

### 8.4 Test Results

| Channel | Frequency (MHz) | 6 dB OBW (kHz) | Limit (kHz) | Result     |
|---------|-----------------|----------------|-------------|------------|
| Low     | 2402            | 721            | > 500       | Compliance |
| Middle  | 2440            | 745            | > 500       | Compliance |
| High    | 2480            | 745            | > 500       | Compliance |

## 9 FCC §15.247(b)(3) – Maximum Output Power

### 9.1 Applicable Standard

According to FCC §15.247(b) (3).

Systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signaling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.

### 9.2 Test Procedure

1. Place the EUT on a bench and set it in transmitting mode.
2. Remove the antenna from the EUT and then connect a low loss RF cable from the antenna port to measuring equipment.

### 9.3 Test Environmental Conditions

|                           |          |
|---------------------------|----------|
| <b>Temperature:</b>       | 26° C    |
| <b>Relative Humidity:</b> | 58 %     |
| <b>ATM Pressure:</b>      | 1010 hPa |

The testing was performed by Tom Hsu on 2018-09-11.

### 9.4 Test Results

| Channel  | Frequency | Maximum peak<br>Conducted Output Power |        | Limit | Result |
|----------|-----------|----------------------------------------|--------|-------|--------|
|          | (MHz)     | (dBm)                                  | (W)    | (W)   |        |
| BLE Mode |           |                                        |        |       |        |
| Low      | 2402      | 0.21                                   | 0.0011 | 1     | PASS   |

---

## 10 FCC §15.247(d) – 100 kHz Bandwidth of Frequency Band Edge

---

### 10.1 Applicable Standard

According to FCC §15.247(d).

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

### 10.2 Test Procedure

1. Check the calibration of the measuring instrument using either an internal calibrator or a known signal from an external generator.
2. Position the EUT without connection to measurement instrument. Turn on the EUT and connect its antenna terminal to measurement instrument via a low loss cable. Then set it to any one measured frequency within its operating range, and make sure the instrument is operated in its linear range.
3. Set RBW to 100 kHz and VBW of spectrum analyzer to 300 kHz with a convenient frequency span including 100 kHz bandwidth from band edge.
4. Measure the highest amplitude appearing on spectral display and set it as a reference level. Plot the graph with marking the highest point and edge frequency.
5. Repeat above procedures until all measured frequencies were complete.

### 10.3 Test Environmental Conditions

|                           |          |
|---------------------------|----------|
| <b>Temperature:</b>       | 26° C    |
| <b>Relative Humidity:</b> | 58 %     |
| <b>ATM Pressure:</b>      | 1010 hPa |

*The testing was performed by Tom Hsu on 2018-09-11.*

### 10.4 Test Results

| <b>Channel</b> | <b>Frequency<br/>(MHz)</b> | <b>Delta Peak to<br/>Band Emission<br/>(dBc)</b> | <b>Limit<br/>(dBc)</b> | <b>RESULT</b> |
|----------------|----------------------------|--------------------------------------------------|------------------------|---------------|
| Low            | 2402                       | 44.82                                            | $\geq 20$              | PASS          |
| High           | 2480                       | 45.83                                            | $\geq 20$              | PASS          |

## 11 FCC §15.247(e) – Power Spectral Density

---

### 11.1 Applicable Standard

According to FCC §15.247(e).

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. This power spectral density shall be determined in accordance with the provisions of paragraph (b) of this section. The same method of determining the conducted output power shall be used to determine the power spectral density.

### 11.2 Test Procedure

According to ANSI C63.10-2013

- a) Set analyzer center frequency to DTS channel center frequency.
- b) Set the span to 1.5 times the DTS bandwidth.
- c) Set the RBW to  $3 \text{ kHz} \leq \text{RBW} \leq 100 \text{ kHz}$ .
- d) Set the VBW  $\geq [3 \times \text{RBW}]$ .
- e) Detector = peak.
- f) Sweep time = auto couple.
- g) Trace mode = max hold.
- h) Allow trace to fully stabilize.
- i) Use the peak marker function to determine the maximum amplitude level within the RBW.
- j) If measured value exceeds requirement, then reduce RBW (but no less than 3 kHz) and repeat

**11.3 Test Environmental Conditions**
