Equipment Under Test (EUT)

BLE Smart Tag
Model: CFXBLE-1
Serial no: DTM-00002 (radiated tests)
DTM-0005 (conducted tests)
FCC ID: 2AMK9-CFXBLE-1
IC: 22897-CFXBLE-1

Description of the EUT

The EUT is a smart tag watch with Bluetooth Low Energy capabilities. The smart tag uses replaceable CR2477 batteries as a power source and it does not have any I/O ports for connecting ancillary equipment.

Classification of the device

Fixed device ☐
Mobile Device (Human body distance > 20cm) ☐
Portable Device (Human body distance < 20cm) ☒

Modifications Incorporated in the EUT

No modifications were applied to the EUT during testing.

Ratings and Declarations

Operating Frequency Range (OFR): 2402 - 2480 MHz
Channels: 40
Channel separation: 2 MHz
99% Channel bandwidth: 1.079594790 MHz (high channel)
Effective conducted power: 0.74 dBm (peak)
Transmission technique: DSSS
Modulation: GFSK
Antenna gain: 2.15 dBi

Power Supply

Operating voltage range: 3.0 VDC (2 x CR2477 batteries in parallel)

Mechanical Size of the EUT

56 mm x 54 mm x 19 mm

Samples

Two samples were used in tests. One with RF connector replacing antenna for conducted measurements. Both samples were tested with special firmware made for testing purposes.

Disclaimer

Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Unless otherwise stated the results shown in this test report refer only to the sample(s) tested and such sample(s) are retained for 90 days only. This document cannot be reproduced except in full, without prior approval of the Company.

SUMMARY OF TESTING

Test Specification	Description of Test	Result
§15.207(a) / RSS-GEN 8.8	Conducted Emissions on Power Supply Lines	N/A ¹⁾
§15.247(b)(3) / RSS-247 5.4(d)	Maximum Peak Conducted Output Power	PASS
§15.247(a)(2) / RSS-247 5.2(a)	6 dB Bandwidth	PASS
§15.247(e) / RSS-247 5.2(b)	Power Spectral Density	PASS
RSS-GEN 6.6	99% Occupied Bandwidth	PASS
§15.247(d) / RSS-247 5.5	100 kHz Bandwidth of Frequency Band Edges and Conducted Spurious Emissions	PASS
§15.209(a), §15.247(d) / RSS-247 5.5	Radiated Emissions Within The Restricted Bands	PASS

1) The EUT cannot be connected to public network, no input/output ports.

EUT Test Conditions

The EUT was in continuous transmit mode during all the tests. The hopping was stopped and the EUT was configured into the wanted channel using software provided by the manufacturer. Normal modulation and duty cycle was applied in all the tests.

The EUT was tested without wristband.

Following channels were used during the tests when the hopping was stopped:

Channel Low (Ch 0) = 2402 MHz

Channel Mid (Ch 19) = 2440 MHz

Channel High (Ch 39) = 2480 MHz

Test Facility

☐ Testing Location / address: FCC registration number: 90598	SGS Fimko Ltd Särkiniementie 3 FI-00210, HELSINKI FINLAND
☒ Testing Location / address: FCC registration number: 178986 Industry Canada registration number: 8708A-2	SGS Fimko Ltd Karakaarenkuja 4 FI-02610, ESPOO FINLAND

TEST RESULTS

Maximum Peak Conducted Output Power

Standard: ANSI C63.10
Tested by: PKA
Date: 14 July 2017
Temperature: 23 °C
Humidity: 35 % RH
Measurement uncertainty: $\pm 2.87\text{dB}$

Level of confidence 95 % (k = 2)

FCC Rule: 15.247(b)(3)
RSS-247 5.4(4d)

For systems using digital modulation in the 2400-2483.5 MHz bands the limit is 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power.

Measured values are peak values.

Results:

Maximum conducted output power

Channel	Conducted Power [dBm]	Limit [dBm]	Margin [dBm]	Result
Low	0.71	30	29.29	PASS
Mid	0.74	30	29.26	PASS
High	0.64	30	29.36	PASS

Figure 1: Conducted power (ch low)

Maximum Peak Conducted Output Power

Figure 2: Conducted power (ch mid)

Figure 3: Conducted power (ch high)

Transmitter Radiated Spurious Emissions

Transmitter Radiated Spurious Emissions 9 kHz - 25000 MHz

Standard: ANSI C63.10
Tested by: RRE / PKA
Date: 26 June, 13 July and 26 September 2017
Temperature: 23 °C
Humidity: 23 - 52 % RH
Measurement uncertainty: ± 4.51 dB Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)

RSS-247 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a).

The correction factor in the final result table contains the sum of the transducers (antenna + amplifier + cables).

Table 1: Limits

Frequency range [MHz]	Limit [μ V/m]	Measurement distance	Detector
0.009-0.090	2400/F(kHz)	300	Average
0.090-0.110	2400/F(kHz)	300	Quasi-peak
0.110-0.490	2400/F(kHz)	300	Average
0.490-1.705	24000/F(kHz)	30	Quasi-peak
1.705-30.0	30	30	Quasi-peak

Frequency range [MHz]	Limit [μ V/m]	Limit [dB μ V/m]	Detector
30 - 80	100	40.0	Quasi-peak
88 - 216	150	43.5	Quasi-peak
216 - 960	200	46.0	Quasi-peak
960 - 1000	500	53.9	Quasi-peak
Above 1000	500	53.9	Average
Above 1000	5000	73.9	Peak

Low channel

Table 2: Quasi-peak results (ch low)

No peaks

Transmitter Band Edge Measurement and Conducted Spurious Emissions

Standard: ANSI C63.10
Tested by: PKA
Date: 14 July 2017
Temperature: 23 °C
Humidity: 35 % RH
Measurement uncertainty: ± 2.87 dB

Level of confidence 95 % (k = 2)

FCC Rule: 15.247(d), 15.209(a)
RSS-247 5.5

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in Section 15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in Section 15.205(a), must also comply with the radiated emission limits specified in Section 15.209(a) (see Section 15.205(c)).
