

An advertisement for the SwiftFinder Smart Tag Manual ST21 Duo. The background is a dark, textured surface. On the left, the text "SwiftFinder®" is written in a white, sans-serif font. Below it, "Smart Tag Manual ST21 Duo" is written in a larger, bold, white sans-serif font. Underneath that, the phrase "Tag any object and make it smart" is written in a smaller, white sans-serif font. In the bottom left corner, there is a white rounded rectangle containing the Apple Find My logo (a green circular icon with a white dot) and the text "Works with Apple Find My" in a black sans-serif font. On the right side of the image, there is a large, faint, circular graphic that resembles a technical drawing or a stylized representation of a tag, with some internal lines and a small text label "Smart Tag Manual ST21 Duo" inside it.

Find My	Locate your item by using the Apple Find My app on your

SwiftFinder Smart Tag ST21 Duo works with the Apple Find My network helping to locate belongings in an easy and secure way. The Find My network is a crowdsourced network of almost one billion Apple devices that use Bluetooth wireless technology to detect missing devices or items nearby and report their approximate location back to the owner in the Apple Find My app. The entire process is end-to-end encrypted anonymous, so no one else, not even Apple or ST21 DUO can view a device's location or information.

Use of the Works with Apple badge means that a product has been designed to work specifically with the technology identified in the badge and has been certified by the product manufacturer to meet Apple Find My network product specifications and requirements. Apple is not responsible for the operation of this device or use of this product or its compliance with safety and regulatory standards.

1. Activate your Smart Tag by pressing the button on it. It is ready to connect to your phone when you hear a melody with a rising tone. If no action is taken within 1 minute, you will hear a melody with a falling tone, and the Smart Tag will enter sleep mode. Press the button again to reactivate it.
2. Open the Apple Find My app or the SwiftFinder app on your phone to pair the device (see details on next section). Once the pairing process is complete, your Smart Tag is ready for use.
3. You can test the connectivity by pressing the button on the Smart Tag. It will emit a single beep if the tag is successfully connected to your phone, and two beeps if it is not.

1. **System Settings:** To ensure optimal functionality of SwiftFinder devices, it is essential to keep the SwiftFinder app running in the background. Android phones often close background apps automatically. To prevent this, please disable the "Manage Automatically" setting for the SwiftFinder app in your phone's settings.
2. **Occasionally,** the Bluetooth module in Android phones may experience freezing. If you encounter a situation where your smart tag fails to connect with the SwiftFinder app despite being in close proximity to your phone, please restart the Bluetooth feature on your phone.

The smart tag comes with a CR2032 battery that can be easily replaced. By following the provided simple instructions, you can effortlessly remove and replace the battery on your own.

How can I link my Smart Tag to a different account?

You need to unlink it from previous account first, Log into the Apple Find My app or the SwiftFinder app with the previous account and proceed to delete the Smart Tag 21 Duo.

Why does the APP fail to detect my Smart Tag when I attempt to add it to the APP?

It's possible that your smart tag is in sleep mode. Please press and hold the button to activate it first. After that, ensure that you have granted the location permission and the Nearby devices SearchFind permission (Android Only).

To resolve this issue, we recommend reinstalling the battery. For more detailed instructions, please refer to our YouTube video.

You can choose to only run the app when you are trying to find the tag. However, there are many advanced features. Like separation alert, keeping last seen location, requires the app running all the time. The APP has been optimized to run in the background without significant battery drain. For more information, please refer to our Facebook page.

Disable and re-enable Bluetooth on your phone, or restart your phone.

- You can also email us at: cs@swiffinder.net if you have other questions.
- Learn more in the App Instructions. Open the **App Swiffinder** → **Me** → **Support** → **Help Center**. And you will see more Q&A to help you learn more about our products.

1 The device complies with part 15 of the FCC Rules. Operation is subject to the condition that this device does not
2 cause harmful interference. (1) This device may not cause harmful interference, and (2) this device must accept any
3 interference received, including interference that may cause undesired operation.
4 Any changes or modifications not expressly approved by the party responsible for compliance
5 could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
