7 Test Settings

Test Setup

**Remrak:**

1. The EHP 200AC probe antenna diameter is 8.8cm.
2. A is Front side, B is Back side, C is Left side, D is Right side, E is Top side.
3. The test distance of A, B, C, D, E side is 20cm.

Test Procedure

1. Installing the probe and turn on the EHP 200AC power switch, in the testing software, select the magnetic field test mode and the A/m unit, select the peak detection mode, select the Max-Hold display.
2. Check the background noise.
3. Make DUT work at maximum transmit power.
4. During the measurement, the probe centre of the EHP 200AC is kept in 20cm distance from each test surface of the Wireless Charger base, and recorded the measured values of the A, B, C, D, E side are separately.
5. In the testing software, Select the electric field test mode and the V/m unit, select the peak detection mode, select the Max-Hold display.

Note1: The sensitive elements are located approximately 8mm below the external surface

Note2: Measurements should be made from all sides and the top of the primary/client pair, with the 20cm measured from the center of the probe(s) to the edge of the device.

- 1) The RF exposure test was performed in anechoic chamber.
- 2) The measurement probe was placed at test distance (20cm) which is between the edge of the charger and the geometric center of probe.
- 3) The highest emission level was recorded and compared with limit as soon as measurement of each points (A, B, C, D, E) were completed.
- 4) The EUT was measured according to the dictates of KDB 680106 D01 v04.
