4 Method of measurement

4.1 Applicable Standard

According to §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

According to §1.1310 and §2.1093 RF exposure is calculated.

According KDB680106 D01v02: RF Exposure Wireless Charging Apps v02.

5 Test Result

Test setup:	 The diagram illustrates the test setup. A rectangular anechoic chamber is shown with four measurement points labeled A, B, C, and D. Point A is on the left side, B is on the right side, C is on the top edge, and D is on the bottom edge. A probe is positioned 10 cm from the right edge of the chamber, and a device is connected to the probe. The distance from the probe to the chamber edge is indicated as 10 cm.
Test Procedure:	a) The RF exposure test was performed on 360 degree turn table in anechoic chamber. b) The measurement probe was placed at test distance (10cm) which is between the edge of the charger and the geometric centre of probe. c) The turn table was rotated 360d degree to search of highest strength. d) The highest emission level was recorded and compared with limit as soon as measurement of each points (A, B, C, D, E) were completed. e) The EUT were measured according to the dictates of KDB 680106D01v02.

5.1 Equipment Approval Considerations:

The EUT does comply with item 5.2 of KDB 680106 D01v02	
a)	Power transfer frequency is less than 1MHz.
	Yes; the device operate in the frequency range from 110 KHz to 205 KHz
b)	Output power from each primary coil is less than 5 watts
	Yes; the maximum output power of the primary coil is 4W<5W.
c)	The transfer system includes only single primary and secondary coils. This includes charging systems that may have multiple primary coils and clients that able to detect and allow coupling only between individual pair of coils.
	Yes; the transfer system includes only single primary and secondary coils.
d)	Client device is inserted in or placed directly in contact with the transmitter.
	Yes; Client device is placed directly in contact with the transmitter.
e)	The maximum coupling surface area of the transmit (charging) device:
	Yes; The EUT coupling surface area was 65 cm ² >60cm ²
f)	Aggregate leakage fields at 10cm surrounding the device from all simultaneous transmitting coils are demonstrated to be less than 30% of the MPE limit.
	Yes; The EUT field strength levels are 30% x MPE limit.

5.2 E and H field Strength
