Declaration Letter of Model Difference

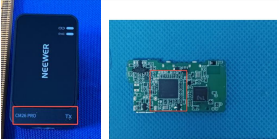

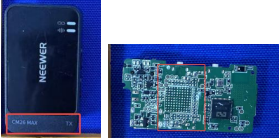

Date: 2026-9-9

IC: 22889-CM26PRO
FCC ID: 2ANIV-CM26PRO

Dear Sir/Madam,

We, **Shenzhen Neewer Technology Co., Ltd**, Hereby declares the following statement,
The RF boards and circuitry of these models are the same, except for the model name and
the non-RF circuit part are different that will not affect the RF parameters :

Product description: Wireless AI Lav Mic
Model No.: CM26 PRO, CM26 MAX
PMN: Wireless AI Lav Mic
HVIN: CM26PRO, CM26MAX
Details of the differences are shown below:

Model	HVIN	photo difference	Difference description
CM26 PRO	CM26PRO		Model: CM26 MAX The product utilizes a highly integrated single-chip solution powered by the Audio Wireless SoC (WiLink WS300), which incorporates the baseband controller, RF frontend, audio CODEC, and power management unit (PMU) into a single die. The mainboard contains no external high-speed digital communication buses. With the RF performance and electromagnetic compatibility (EMC) being highly integrated, the hardware architecture remains simple, presenting an
CM26 MAX	CM26MAX		

			<i>exceptionally low risk of EMI radiation. Model: CM26 PRO The product employs a dual-chip architecture: the WiLink WS300 serves as the dedicated wireless RF and audio processing unit, while the GigaDevice GD32 acts as the host MCU responsible for overall system logic control and peripheral management. Local data exchange between the two chips is implemented via [Insert bus type here, e.g., UART/SPI/I2S]. To prevent digital noise from interfering with the RF frontend, impedance matching and filtering optimizations have been strictly applied to the inter-chip high-speed signal traces during the design phase.</i>
