

Declaration Differences

The remote control produced by our company, model JCHR35H13C, has different appearances of the casing and the panel, so the suffix JCHR35H13C-X-XXX is added to distinguish them. No matter what the appearance are, they have the the same circuit board, PCB layout, and electrical structure. The only differences lie in the appearance of the casing and the panel.

JCHR35H13C-X-XXX

- 1) X represents the color of the shell: for example, black - B; white - G; silver gray - S.
- 2) XXX represents different silk-screened rubber key components, which are serial numbers, ranging from 001 to 999.
