Test Report

USA FCC Part 15.225, 15.209
CANADA RSS-210, RSS-Gen

(*) Identification of item tested	Locker for furniture
(*) Trademark	Ojmar
(*) Model and /or type reference	Model: OTS 033 Type: 30-68
Other identification of the product	HW version: Combi board Hw1.0 / antenna Hw1.0 SW version: 2.1.5 FCC ID: 2ANY7OJM004 IC: Not provided
(*) Features	Mifare Classic, Mifare Desfire EV1 2K, 4K, 8K, Ultralight, compatible with Ultralight C and technogym
Applicant	OJMAR S.A. Polígono industrial de Lerun s/n 20870, Elgoibar, Gipuzkoa, Spain
Test method requested, standard	USA FCC Part 15.225 (10–1–19 Edition): Operation within the band 13.110 -14.010. USA FCC Part 15.209 (10–1–19 Edition): Radiated emission limits, general requirements. CANADA RSS-210 Issue 10 (December 2019). CANADA RSS-Gen Issue 5 (March 2019). ANSI C63.10-2013: American National Standard for Testing Unlicensed Wireless Devices.
Summary	IN COMPLIANCE

Competences and guarantees

DEKRA Testing and Certification is a testing laboratory accredited by the National Accreditation Body (ENAC - Entidad Nacional de Acreditación), to perform the tests indicated in the Certificate No. 51/LE 147.

DEKRA Testing and Certification is a FCC-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

DEKRA Testing and Certification is an ISED-recognized accredited testing laboratory with appropriate scope of accreditation that include testing performed in this test report.

In order to assure the traceability to other national and international laboratories, DEKRA Testing and Certification has a calibration and maintenance program for its measurement equipment.

DEKRA Testing and Certification guarantees the reliability of the data presented in this report, which is the result of the measurements and the tests performed to the item under test on the date and under the conditions stated on the report and, it is based on the knowledge and technical facilities available at DEKRA Testing and Certification at the time of performance of the test.

DEKRA Testing and Certification is liable to the client for the maintenance of the confidentiality of all information related to the item under test and the results of the test.

The results presented in this Test Report apply only to the particular item under test established in this document.

IMPORTANT: No parts of this report may be reproduced or quoted out of context, in any form or by any means, except in full, without the previous written permission of DEKRA Testing and Certification.

General conditions

1. This report is only referred to the item that has undergone the test.
2. This report does not constitute or imply on its own an approval of the product by the Certification Bodies or competent Authorities.
3. This document is only valid if complete; no partial reproduction can be made without previous written permission of DEKRA Testing and Certification.
4. This test report cannot be used partially or in full for publicity and/or promotional purposes without previous written permission of DEKRA Testing and Certification and the Accreditation Bodies.

Uncertainty

Uncertainty (factor k=2) was calculated according to the DEKRA Testing and Certification internal document PODT000.

Data provided by the client

The following data has been provided by the client:

1. Information relating to the description of the sample ("Identification of the item tested", "Trademark", "Model and/or type reference tested").
2. The sample of the model OTS Advance 033 is an Electromechanical lock with RFID proximity communication (13.56 MHz) compatible with Mifare Classic, Mifare Desfire and Mifare Ultralight technologies.
Lock is power supplied by 4 1.5V AA batteries.
Lock also allows NFC communication at 13.56 MHz for identification and maintenance purposes.
Lock works in the following way:

One knob is pressed one switch is activated. This one activates the communication between inner side antenna of the lock and a proximity card. If data between lock and card is correct, a motor that blocks the lock is activated.

Opening is made in the same way as the closing.

Lock is always in IDLE sleep mode until switch is activated.

DEKRA Testing and Certification S.A.U. declines any responsibility with respect to the information provided by the client and that may affect the validity of results.

Usage of samples

Samples undergoing test have been selected by: The client.

- Sample S/01 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
66768/003	Locker for furniture	OTS Advance 033	--	2020/11/20

Sample S/01 has undergone the following test(s): The Radiated tests and the "Occupied Bandwidth" test indicated in the Appendix A.

- Sample S/02 is composed of the following elements:

Control N°	Description	Model	Serial N°	Date of reception
66768/007	Locker for furniture	OTS Advance 033	--	2020/11/20

Sample S/02 has undergone the following test(s): The "Frequency Tolerance of the Carrier Signal" test indicated in the Appendix A.

Testing period and place

Test Location	DEKRA Testing and Certification S.A.U.
Date (start)	2020-11-21
Date (finish)	2020-11-26

Document history

Report number	Date	Description
66768RRF.001	2021-01-19	First release.

Environmental conditions

In the control chamber, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the semianechoic chamber, the following limits were not exceeded during the test.

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

In the chamber for conducted measurements, the following limits were not exceeded during the test:

Temperature	Min. = 15 °C Max. = 35 °C
Relative humidity	Min. = 20 % Max. = 75 %

Remarks and comments

The tests have been performed by the technical personnel: Alfonso Gutiérrez, José Gabriel Pendón, Javier Miguel Nadales.

Used instrumentation:

TEST CONDITIONS

POWER SUPPLY (V) and ANTENNA:

V nominal:	6 Vdc
Type of Power Supply:	4 x 1.5V AA batteries.
Antenna Type:	Integrated PCB antenna.
Antenna Gain:	Not Applicable for this type of antenna

TEST FREQUENCIES:

Nominal Operating Frequency: 13.56 MHz

CONDUCTED MEASUREMENTS:

The equipment under test was set up in a shielded room and it is directly connected to the spectrum analyzer.

For frequency stability test the EUT was placed inside a climatic chamber and connected to a frequency meter using a low loss cable. An external DC power supply was connected to the EUT for voltage variation test.

RADIATED MEASUREMENTS:

All radiated tests were performed in a semi-anechoic chamber. The measurement antenna (Loop antenna for the range between 9 kHz to 30 MHz and Bilog antenna for the range between 30 MHz to 200 MHz) is situated at a distance of 3 m.

For radiated emissions in the range 9 kHz to 30 MHz that is performed at a distance closer than the specified distance, an inverse proportionality factor of 40 dB per decade is used to normalize the measured data for determining compliance.

The equipment under test was set up on a non-conductive platform above the ground plane and the situation and orientation was varied to find the maximum radiated emission. It was also rotated 360° and in the range between 30 MHz and 200 MHz the antenna height was varied from 1 to 4 meters to find the maximum radiated emission. In the range between 9 kHz and 30 MHz the measurements were made in the three different orientation planes of the loop antenna to determine the maximum received field. In the range between 30 MHz and 200 MHz the measurements were made in both horizontal and vertical planes of polarization.

Radiated measurements setup 9 kHz to 30 MHz:

Radiated measurements setup 30 MHz to 200 MHz:

Occupied Bandwidth

RESULTS:

99 % Occupied Bandwidth and 20 dB Bandwidth.

Operation mode	99% Occupied Bandwidth (kHz)	20 dB Bandwidth (kHz)
NFC	679.6	447.678
Measurement uncertainty (kHz)	<±1.20	

Verdict: PASS

15.225 (a) / RSS-210 B.6 (a)(i) Field Strength of Emissions within the band 13.553 MHz - 13.567 MHz

SPECIFICATION:

The field strength of any emissions within the band 13.553 – 13.567 MHz shall not exceed 15,848 microvolts/meter (84 dB μ V/m) at 30 meters.

RESULTS:

Measurement distance: 3 meters.

The limit shown in the above plot is extrapolated to 3 meters.

Frequency (MHz)	Maximum field strength (dB μ V/m) measured at 3 m (quasi-peak detector)	Maximum field strength (dB μ V/m) extrapolated to 30 m (40 dB/decade)
13.561	55.51	15.51
Measurement uncertainty (dB)	< $\pm$ 3.04	

Verdict: PASS

15.225 (b) / RSS-210 B.6 (a)(ii) Field Strength of Emissions within
the band 13.410 MHz -13.553 MHz and 13.567 MHz -13.710 MHz

SPECIFICATION:

Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter (50.47 dBµV/m) at 30 meters.

RESULTS:

Measurement distance: 3 meters.

• Band 13.410 - 13.553 MHz:

The limit shown in the above plot is extrapolated to 3 meters.

Frequency (MHz)	Maximum field strength (dBµV/m) measured at 3 m (quasi-peak detector)	Maximum field strength (dBµV/m) extrapolated to 30 m (40 dB/decade)
13.454	43.02	3.02
Measurement uncertainty (dB)	<±3.04	

Verdict: PASS

• Band 13.567 - 13.710 MHz:

The limit shown in the above plot is extrapolated to 3 meters.

Frequency (MHz)	Maximum field strength (dBµV/m) measured at 3 m (quasi-peak detector)	Maximum field strength (dBµV/m) extrapolated to 30 m (40 dB/decade)
13.567	42.11	2.11
Measurement uncertainty (dB)	<±3.04	

Verdict: PASS

15.225 (c) / RSS-210 B.6 (a)(iii) Field Strength of Emissions within the band 13.110 MHz -13.410 MHz and 13.710 MHz - 14.010 MHz

SPECIFICATION:

Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz, the field strength of any emissions shall not exceed 106 microvolts/meter (40.51 dB μ V/m) at 30 meters.

RESULTS:

Measurement distance: 3 meters.

• Band 13.110 - 13.410 MHz:

The limit shown in the above plot is extrapolated to 3 meters.

Frequency (MHz)	Maximum field strength (dB μ V/m) measured at 3 m (quasi-peak detector)	Maximum field strength (dB μ V/m) extrapolated to 30 m (40 dB/decade)
13.35	39.57	-0.43
Measurement uncertainty (dB)	< $\pm$ 3.04	

Verdict: PASS

• Band 13.710 - 14.010 MHz:

The limit shown in the above plot is extrapolated to 3 meters.

Frequency (MHz)	Maximum field strength (dBµV/m) measured at 3 m (quasi-peak detector)	Maximum field strength (dBµV/m) extrapolated to 30 m (40 dB/decade)
13.774	35.49	-4.51
Measurement uncertainty (dB)	±3.04	

Verdict: PASS

15.225 (d) / RSS-210 B.6 (a)(iv) Field Strength of Emissions outside of the band 13.110 MHz - 14.010 MHz

SPECIFICATION:

Field strength of any emissions appearing outside of the band 13.110 MHz - 14.010 MHz band shall not exceed the general radiated emission limits in 15.209/RSS-Gen:

Frequency Range (MHz)	Field strength ($\mu\text{V/m}$)	Field strength ($\text{dB}\mu\text{V/m}$)	Measurement distance (m)
0.009-0.490	2400/F(kHz)	-	300
0.490-1.705	24000/F(kHz)	-	30
1.705 - 30.0	30	29.54	30
30 - 88	100	40	3
88 - 216	150	43.5	3
216 - 960	200	46	3
Above 960	500	54	3

RESULTS:

All tests were performed in a semi-anechoic chamber at a distance of 3 m.

The spectrum was inspected from 9 kHz to 200 MHz searching for spurious signals.

The field strength is calculated by adding correction factor to the measured level from the spectrum analyzer. This correction factor includes antenna factor, cable loss and pre-amplifier gain.

Frequency range 9 kHz - 30 MHz:

No spurious frequencies detected at less than 20 dB below the limit.

The limits shown in this plot are extrapolated to 3 m. The highest peak is the carrier frequency.

Resolution bandwidth:

200 Hz for $9 \text{ kHz} \leq f \leq 150 \text{ kHz}$

9 kHz for $150 \text{ kHz} \leq f \leq 30 \text{ MHz}$

Frequency range 30 - 200 MHz:

No spurious frequencies detected at less than 20 dB below the limit.

This plot shows the results of the scan using peak detector.

Verdict: PASS

15.225 (e) / RSS-210 B.6 (b) Frequency Tolerance of the Carrier Signal

SPECIFICATION:

The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% of the operating frequency over a temperature variation of -20 degrees to +50 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For hand carried, battery powered equipment, reduce primary supply voltage to the battery operating end point which shall be specified by the manufacturer.

RESULTS:

Nominal Operating Frequency: 13.56 MHz.

- **Frequency Stability over Temperature Variations:**

Temperature (°C)	Frequency Error (kHz)	Frequency Error (%)
+50	-0.23000000	-0.00169617
+40	-0.22000000	-0.00162242
+30	-0.23000000	-0.00169617
+20	-0.24000000	-0.00176991
+10	-0.30000000	-0.00221239
0	-0.32000000	-0.00235988
-10	-0.33000000	-0.00243363
-20	-0.34000000	-0.00250737

- **Frequency Stability over Voltage Variations:**

DC Voltage	Voltage (V)	Frequency Error (kHz)	Frequency Error (%)
Vmax	6.9	-0.22000000	-0.00162242
Vmin	5.1	-0.24000000	-0.00176991

Verdict: PASS
